Chris Jordan 00:00

Okay, what is Attention? Attention? You are listening to a pre recorded episode of The Curious realm. Various realm is busy traveling the vast void of time and space to find the best paradigm changing content the universe has to offer. Enjoy the following transmission and remember stay curious curious curious coming from the city of the we're exploring topics from the esoteric and unexplored, two dimensions are known. Shining a light of truth on the darkest corners of our reality. Welcome to the curious realm

01:17

Well,

Chris Jordan 01:17

hello, everybody and welcome to this episode of The Curious realms. Episode Five. coming at you from Austin, Texas. This is a pre recorded episode. Before you guys start firing off questions, though, I will be live monitoring the episode from Fabulous Las Vegas Nevada. I am I am time traveling right now. with you guys. Because well, I'm in Vegas covering ces for for my original show. Talking sound Podcast. I'm here at the tech Podcast Network. It's gonna be great stuff on by check it out on the homepage talking sound show.com Talking sound podcast.com I am shameless. I'll tell you about all of it. I'm excited tonight to welcome back good friend of the former dudes and beer podcast now friend of the curious round Jared Murphy. He is author of the book. It's not aliens worse. It's us discovering our last history. We will be talking about megalithic America, megalithic sites in America things like Kincade cave, the supposedly Egyptian cave that was found reported by the Smithsonian then lost to the ages. Does it exist? Is it there? Is it still there to this day. He has a great, great documentary that he just put out on his YouTube channel that will watch a clip or two of called terracor. Talking about that, and other stuff we'll be talking about lost knowledge of the Americas, right here tonight with our good friend Jared Murphy, owner of not aliens.com as well as co host of everything imaginable. His book is actually being rewritten and re released. So we'll be talking about that all kinds of

great stuff. While you're online, checking all that out, make sure to stop by curious realm.com We have all kinds of great stuff over there. We have the new store, the store is up live. We always wanted merch things like that for a previous show, but so glad to have great things now that like I'm running the show. From a curious realm mouse pad, you can get a curious realm tie dye or you know, mask hat, all kinds of stuff stop on by check it out curious realm.com That is where you can also find the knowledge vault. For all of our declassified documents. That's where you can find all of the episodes. That's where you can tune in live. And check everything out hot take folks just so you know. If you subscribe to it, thank you so much if you subscribe to us on any podcast service out there. However, just so you know, those front row lads those mid roll ads, things like that, they disappear. If you go follow the RSS from the website. If you actively go and listen on the website. You don't hear those ads at the beginning. And at the end the only thing you hear is direct ad placement from our advertisers in the middle from our actual show sponsors not random ads from other platforms. So stop on by check it out. That is encouragement to download the free curious roam app. It's fantastic. It's great. It's right there in your pocket. It's got a tip calculator. Sorry, and Apple Vokes you orchard dwellers we are working on it, we have the source code, we just have to have it made into an Apple app. I don't know if I'm going to because I don't think you can sideload an Apple app. And I really love the fact that all you have to do is go to this page curious rome.com forward slash app, click the image, and it says, download the app and install it like right there in front of you. So it's great. You don't even have to visit or give your data to any online system like the Google Play Store, or anything like that. You can directly download our app. have access to everything right there at your fingertips, as well as a great tip calculator. Stop on by check it out, curious realm.com forward slash app. While you're online doing that, make sure to stop by the curious realm on Facebook. You can follow curious roam podcasts that is the page where you will get all the news and updates directly from the website. Or you can come become a member of the group and that is where we draw are dudes and beer news of the week every week. That's where we post articles carry on conversations with like minded individuals in the world of disclosure and lost knowledge and esoteric knowledge. One of the things we'll be talking about tonight, actually, NASA paid priests to figure out how to deal with aliens. I've been telling a lot of people like GE Dutton this kind of sound a little bit like Project Blue Beam. We'll be getting into some of that some of the lost knowledge behind things like that. Glenn Maxwell found guilty in her sexual trafficking charges and that news is all over I posted it from about eight or nine different sources. It is official that has actually happened out of daily mail.com or.co.uk Chinese locked down rule breakers or shamed to encourage COVID compliance like this is straight up at a Game of Thrones folks. Like Shame, shame, it's wild more about go a Maxwell and then out of the AP news new COVID 19 cases in the US soar to highest levels on record. Interesting. Coming on the heels of the one year anniversary of the COVID-19 vaccines out of social from TechCrunch true simple completes its first driverless autonomous truck run on public roads. That is pretty huge news. Also huge news huge news. You can stop by and support curious realm. Stop on by check it out. That is curious Rome forward slash support. Our guest this evening, the amazing the great Jared Murphy, author of it's not aliens, it's us has come out with this fantastic documentary. Let's check out just a couple seconds of it here to get a little primer of what we're going to discuss tonight

08:14

influence of Victorian archaeologists. And although there's a lot of great conversations and a lot of light, a renaissance in archaeology and information about our ancient past, we have been so embedded because of Victorian archaeology, to believe that we are the most advanced we ever were we miss high tech, ancient human works, it's dismissed trains are at these nubs at

the top of these posts are examples of engineering way beyond what it would take to build the structure. But that's how it's left. That's what we're left as a narrative that we are as advanced as we've ever been. And that's not true. That's what we're going to be discussing. Ancient Advanced Engineering right down to the soil, terraforming a planet genetics information that is so beyond what's currently been dialogue that none of these Victorian archaeologists even had on their radar. It was outside of their belief system. They were interpreting it with a Western eye in a system that did not allow for us to be more advanced than we were today other than loincloths, but that's not true.

 Chris Jordan 09:20

Welcome back to the show. The voice you are hearing and the writer, director, creator of this amazing documentary terracor Jared Murphy, how are you doing this evening?

 09:33

Thank you so much for having me on

 Chris Jordan 09:35

out. Thank you so much for coming back. You know, you were you were actually just a little inside baseball folks. Jared was a big distinct big part of the decision to rebrand this show. We for some reason, I think just kindred Lee hit it off whenever you appeared on the previous incarnation of this show. The first Time. And yes, as as I had you on, it was just one of those like, this could be so much more than what it is. But it can't be that under this banner. And we had a long, long conversation one night when I was on vacation with my family in Florida, and that I remember hanging up and going, Yeah, it's happening. So thank you for that. And thank you for being there. And being part of that catalyst of change. One of the one of the many cogs in the gearbox that has gotten curious realm going, Jared, so here's to you, thank you, my friend.

 10:40

Well, I will drink to that. And I appreciate you know, like he said, kindred spirits when we were able to connect offline. And the reality was, is we you know, we have very parallel, certain, I think, life experiences were just clicked where I'm excited about your new show, as far as the brand name, because you've already been the man behind the branding. And I just think the, it's so interesting, they're like, you know, the brand need to brand he's got to be good. And the reality is, is that the show is so cool. And I'm not just saying that, folks, but thank you. I just get it. I generally, I think anyone who is a fan of mine or is getting to know me, I have zero filter, it is too difficult to lie, than it is to just I just literally

 Chris Jordan 11:32

energy to devote to like convincing myself that it's true to continue the lie.

11:38

Right? It's just we have so much to learn. Isn't it easier to just, let's just do what we say say what we're thinking Come on, you know, the sun, one thing leads to another.

Chris Jordan 11:48

That's it. That's it. Well, let's and speaking of doing what you say you're going to do, and one thing leads to another terracor this documentary that you have just come out with the whole the whole theme behind tonight's episode is megalithic America. We recently had Dennis stone on for the sole school. He is of course the owner of America Stonehenge when a great megalithic site that is still under investigation.

12:18

Yeah, I was there I did my life Asher there last last April, we did a lecture and then did a tour of America Stonehedge on site with clients or with with fans and people who chose to come out along with Michael from dark our paranormal who I do some co hosting with but we came out I did a live lecture at the local American Legion Post. And then we walked America, Stonehenge and I love Dennis I've been able to interview him a bunch of times. And we we actually did a short documentary. Michael Michael did 99% of the work. But in it, it's pretty exciting. Because the mereka Stonehenge documentary that he put out, it was really us both there at the site. But he packed this thing up, but he actually found something that not even Dennis had noticed on America's Stonehenge site. And anyway, anyway, if you go to dark our paranormal, it's on the on their YouTube page, too. But what was really interesting as the site is it spans acres. It is pretty spectacular. Like you said, there are at least evidences to show that it's over 1000 or 9000 years old.

Chris Jordan 13:40

Yeah. Yeah. And, you know, like we said, with, with Dennis on the show, even whenever you go back to the earliest recorded, run across of it, of the local population, when they found it, and put it into the local record, it was like, What's this thing that we ran across? We asked the local Indians and they're like, I don't know, it's been there for years. Like, what's the Indians didn't even have lore about it? No, no. So it's obviously not something that they took the effort to build otherwise they, I mean, they got a pretty good social memory, you know? They do. They do. So yeah, it's just one of those like, it is an utter astounding mystery to get into.

14:33

It is and even when you're there at the site, I asked Dennis something that I thought was very curious. The indigenous in the area for years had been burning out the valley, there were no trees for miles, because they wanted grasslands for the grazing animals that they had. So they practiced controlled burns, and they would make sure that that entire valley that you come up

into that's wooded now, in fact, when we did our lecture when I did my lecture, Dennis was completing 18 acres of tree removal, because the trees were destroying the site. And as we were looking at, like you set up on the very peak of the site when you're when you're looking off across to the other Valley side, which is almost 20 miles away, and you're looking and I looked at Dennis and I just said, Dennis, are there corresponding megalithic mounds on the other sides of the valley? And he goes, boy, you are bright. And I'm like, I'm going to repeat that story. So I could say that I'm right. But if he said yes, there are Dolmen like America hinge. Like just like on a Lord of the Rings where they're like the the beacons on every mountaintop that they could see. Apparently a bunch of these equinoxes, solstices, these key points on that hill, they do correspond to other ruins across this valley by miles away, which would have been easy to see because there was no trees.

 Chris Jordan 16:05

Yes, same. Same with the windows and the walls. All kinds of stuff. And that was one of the one of the things that I posited. Whenever we had him on. I guess the last couple times was the large chambers, if they were actively observation rooms, to be able to block out moonlights from from, you know, Horizon observations, that kind of thing. I wouldn't be able to block out overhead moonlight.

 16:34

You know, we were there at the height. One of the things that had happened was, as Dennis had invited us out for the full moon, and we went out for the full moon. And the timing on that. It was so crazy. It just started raining. It's dark. He gave us the entry code. We were actually at America's Stonehenge at night film.

 Chris Jordan 16:58

We would do like here. Here's the gate code. Just go on in.

 17:02

Yeah, and then yeah, it's during this like super important Moon Equinox, whatever. I'm sure that there are Wicken out there super upset with me right now. Yeah, it was it was a super important solar event, lunar event. And we were out there at exactly around the time that it was supposed to be the most important. And nobody else was there. But it was. Gosh, it was late. It was after a PM. And it was crazy. Because it was raining. It's dark. It was it was kind of going on and off. And then Michael, and I, you know, he, he's much more I think paranormally sensitive. I don't know how else to put it. But from dark our paranormal and he was able to pick up some things in those chambers that you're talking about, then I wasn't picking up that he was more, you know, genetically expressed to be sensitive to. And there were, it was quite an interesting, surreal experience to experience the site during the Lunar event no matter what to be there at night, and alone, and then to do it during the day. And then of course, Dennis is so generous with his time. So I had done the lecture and we brought people out and he spent in between chain sign he spent two hours with our group. It was hilarious.

 Chris Jordan 18:31

And, you know, this, this site, folks is the point of so many hypotheses. I don't like to say theories, because I think that's a bit out there. You got to have some proof to have a theory. You can hypothesize anything you want. And granted, we've had like, la Marzulli on the show a couple times. He is He is one of the big proponents of the fact that it is a former Nephilim complex over there in New Hampshire. That that is what the mountains are in Minnesota. And even possibly what Kincaid cave was in, in what is now the Grand Canyon.

 19:24

Yeah. So many people aren't, you know, this whole thing, by the way started with me and Gary from everything imaginable. Somebody had said something and I was in the middle of planning my South American research trip. And I'm a climber. I have a group of climbers I, you know, I'm not the best climber but I'm a solid climber and I'm with a group that has the skill set and has all the equipment for us to descend or ascend the what should be the Kincaid caves from the rim. It's about 1500 feet down based on distance. Objection, or it's about 2000 feet up from the floor. So at this point, the Grand Canyon is 3480 feet in height. And it's in a very specific place, right near the clogau and rapids. And so it just got really lit because I'm like, Look, there's all these people doing adventures around the world. And they're just, yeah, you know, you're climbing a tall mountain. That's great. But there is the entire northwest area of territory of Canada, most of Antarctica, and quite a bit. Now here's one for you. The Grand Canyon has toured 70 plus miles of tunnels of caves, sorry caves. Of those, only 150 Miles has been explored. And the professor who actually runs Carlsbad made a point to say in an interview about two weeks before we went out here for the week that we were there and said that there are more caves in the Grand Canyon than Carlsbad. Idea. There's 120 Miles 18 feet wide. The canyon is sorry, 80 miles wide, the canyon can be up to 25 miles give or take. It's it's massive and whip. And it's 6000 feet deep. And there's 120 miles of on explored charted caves. And to give you an idea of one of the caves, one of the 150 miles of caves that they have gone into, was found to have over 40 miles of cave in it. Wow. And that's one cave. Out of the period of the 150 miles they have explored so the Kincade cave. I'm like, Look, I have a whole group. We have all the gear. I am over people talking about a cave that's supposed to. Like Kincaid comes back. No Kincaid officially was actually retained. To do. He actually had worked. What's very interesting is that he worked for someone who worked for the Smithsonian. But Kincaid was a photographer that had learned to do nature photography, and what has somebody who had it? Well, anyway, the point is he possibly locates the opening. By the way, there is stained in the articles, there's two articles for him, and you have them up. And in short, the articles describe that he saw a discolored cave wall. Well, the canyon wall is layers and layers and layers of hardened sand. And the canyon is different colors everywhere, everywhere. So okay, maybe he saw a different color. And, and we're not talking just advanced hiking, and he has he could have had stakes and ropes and made his way safely up there. But to ascend to 1000 feet, and to do that is an accomplishment because this wasn't a yes to steep hill. So he gets up there and he finds a cave, which the story goes he found a over 80 mummies, that they were oriental in appearance that there was a Buddha, that it may have been Egyptian, but in reality, the majority of what he described was Asiatic. And let's just say it was there. He said that there was a gate and there was stairs that were near the entrance. Well, we came Rex from leek project and I and some of the I did some broadcast from on my not aliens YouTube channel. I did do some broadcast from the rim of the canyon right there. So we were with a Navajo guide on

Navajo Nation land exactly where the cave is supposed to be. There's no going around it. Based on the description of those two articles. This is where the cave is supposed to be. And we spent a few days and what we did we methodically photographed the exact point in the wall where the Kincaide cave is described to be. It is not there. There's your big drumroll. Oop, drumroll it's not there. Let's not there G cake. Now, some people have pointed out some very smart people have pointed out like let's say that the say the concave cave was there but then they collapse the entrance. So the one thing I will tell everyone is that for sure the Kincaide cave is not at that point. And rapids it's it's a very specific point. Now the wall is very big, but I can tell you, we have very extensive photography of the Kincaide cave wall, but it's not there. And so what we could do is So that say the Smithsonian came took everything out. And it really did happen. And then, oh, we're gonna get to the crashing. By the way, do you know that the start of the FAA is because of the Grand Canyon. What's really interesting is I've learned, okay, so I'll back up. So the biggest craziest thing I learned about the Kincaide cave is two things. One, there are 600 open rate, just just to go look for uranium, there are 600 Open permits. Oh, wow. Now, of uranium, there is also an open pit storage of uranium and contamination in the Colorado River. And it's quite spectacular. And I can go into that in a minute. But also, it was tragically two planes ran into each other, and 128 people died between the two planes. Now, believe it or not, World War Two happens. We, you know, pan-am Catch Me If You Can, Leonardo DiCaprio movie. Air traffic is very innocent, they just assumed that it's a really big sky and no one would run into each other. So once upon a time, it's 1956. They're both flying at 20,000 feet. And these two flights, it was a TWA Flight, I think but into each other. And so they end up having, of course, they do their best to recover all the bodies. But the wreckage did not get a full clean up until the 70s. And that means that there are mysterious looking crane platforms, there is remnants of interest prior, not only of where they did the cleanup of the wreckage, because it landed all over sort of around this area. And then there was also other tourist locations. Canyon, all of it was there for people to visit the canyon in ways that we've forgotten about already. And it means that there are a lot of aspects to the canyon that are very mysterious that lent to people thinking that oh, well, this is a crane platform for the concave case. And to finish one thought before I tell you about the amount of uranium in that in the canyon is that of the of the concave, so the concave may have been collapsed. And we would need a thermal imaging, something at night to get the temperature differential of where there would be an opening to a cave. Yeah, so that is something that we're considering is going back with thermal imaging. So that that's the only part about this for those listening that might be off is that we obviously can't see what may have been collapsed. But we will catch the temperature differential hopefully. And now, excuse me as we are looking for the cave. I'm telling you I did a lot of prep before we did this trip and this whole trip by the way this expedition and by the way, it is an hour and a half of hard four wheel drive driving what for you to go out to this point in the canyon. You need an all wheel drive vehicle you need some experience driving an all in all actual off road but this is intermediate to advanced off roading. We are an hour and a half from a gas station at 40 miles an hour. And that's a scene from a documentary. But the but at the end of the day, we're doing all this research on it. Now those are all nano structures by the way in that picture that you're looking at those are actual nano manmade machines. But we start looking into it and there is

29:01

it seems kind of silly but of course Antelope Canyon where everyone likes to go and then horseshoe Canyon you know where people like to go get that graphic, beautiful photography of the Grand Canyon that Horseshoe Bend. Right and and then of course Antelope Canyon where everyone gets those beautiful photographs of the very the water carved. Where Peter lik you

know did the photography of the dust of the wind and the canyon and the Antelope Canyon where all is curvy and everything and well there's a lake that is some of the it's a damned and there. This is the one of the large water reservoirs there's Antelope Canyon right there. That's and then of course you know, Peter lik did that famous there's Horseshoe Bend on here, lower left. So the lake that is not very far from Horseshoe Bend, which is just right out of town. Well, they have now Now mind you, it's the government, right? They have started uranium mining and I'm all for the United States government and having as much uranium as they need for at the time, you know, mostly nuclear. However, this lake supplies the water for drinking. It's recreational people manage the lake near Horseshoe Bend. And I can't believe it but I'm do me a favor. I'm blanking on the name of the lake. I can't believe it. How's that for live action Jarrett's thinking out loud? Right there. It's, it's hilarious. There

 Chris Jordan 30:43

now great article I have up is talking about stuff in Arizona. But this is this is talking about three large buckets of uranium ore that sat in a museum building in the South Rim of the Grand Canyon National Park, where quite literally, people came and took tours around these buckets of uranium ore man, like Yeah, so that's fine.

 31:16

It's Horseshoe Bend is in Page, Arizona. And I don't know why I couldn't think of like Powell, but it's like Powell. So of the buckets of uranium, right, which sounds asinine, right? So picture this. You need to do 1000s of tonnes of ore to just get a pound of uranium. Yeah. So here's Lake Powell. It's a lot like for those of you who go to the Hoover Dam, which is so low, it's just bananas. Right? Oh, but yeah. So Lake piles in page where Antelope Canyon is, and Horseshoe Bend is and it's a beautiful little town. It's really fun. And Lake Powell, which is a dammed up water reservoir. Well, there's here's the reason they made Lake Powell. They're digging up uranium, and they're like, where are we going to store it all? Do you want to guess where I'm going? Yeah. The fun part is going to be for everyone listening because really, this is worth the build up. How much uranium mining Okay, so when you mind something for those of you who aren't a gold rush fan, because gold rush is kind of fun. Yeah, so you have mining tailings which are the crushed up remnants of the rock They crushed to get the gold or to get when you're crushing up an ore. The remnants of what you don't want are called tailings so they can be basically it's a pile of classified gravel, sometimes smaller, sometimes bigger, but it's the tailings and they have to stick it somewhere they have to stick the piles of the unwanted rock and debris. So officially, there are 36,000 tons of uranium tailings at the bottom of Lake Powell. Because they thought if they stuck it down there and stuck some dirt over it, and stick it in water. It would keep it in cased. Wow. It this is coming from the Kincaid trip, I learned a lot more. We're gonna also talk about dinosaurs. But 36,000 tons of radioactive material is in the drinking water recreational lake, which winds its way down to Colorado, which doesn't even include a very large uranium mine, which was over the border in Utah, on the Colorado that has and by the way, there's multiple ones but they actually have a uranium tailing. Oh, you're gonna love the the explanation on mining the government there was a settlement for a couple of the indigenous tribes that had been breathing radioactive dust and the settlement in 2008 was over a half a billion dollars and they still haven't been paid \$1 Why and there's a lot to be said I did not know I was going to turn into a semi raise the alarm but the the uranium laced groundwaters because so for instance, what I was about to say is there's a mine an old mine

and the tailing pond is a few 100 feet from the river, which I when I say tailing pond, think of just a giant used open pit quarry sort of thing. And they Yeah, and then they they just filled it with water and Okay, so they you have radioactive

 Chris Jordan 34:56

and the quote from the Center for Biological Diversity quote the big question now is whether contaminated water is removed from the mind into deep aquifers that feed Grand Canyon Springs say Grand Canyon trust program director, Roger Clark, quote, once polluted remediation of the aquifers would be impossible. If agencies cannot insure against that pollution, which they can't, the mining should not occur. This was from from a press release from the Center for Biological Diversity from August 4 2014. Yes, from the Sierra Club. You got as you couldn't find somebody? Honestly, more care if I'm not mistaken, was it not the Sierra Club that was partial sponsor of the original trip that supposedly found the underground city?

 35:52

Oh, I don't know. I've actually I've never heard that.

 Chris Jordan 35:58

They did a lot of that stuff back in the day, like the whole national park system was pretty much because of the Sierra Club. And people like, oh,

 36:06

you know, so, Ansel Adams. The, the reality was that Kincaid as a photographer, wasn't I don't think officially retained by the Smithsonian. But he was a photographer, and he was supposed to be photographing the candy and that was part of his job. So I wonder if he was actually under the under a different retainer, and it was really the Sierra Club, I would be interested that now we're really digging into the details. I was shocked. There's so many mining tailings across Arizona, that, again, we need a mining industry, we need to secure the oh there is that we need to understand we need to be able to do this. But I think rather than saying you guys are idiots for not taking care of it. I think for all the times they take money when they think we don't want to pay for it. I don't think anyone wanted to wait two years, by the way. So it's weird. If you talk about the Grand Canyon, you just say I want to go it's really easy. You go to Vegas, you take your car ride or you or you know, maybe you're in Arizona, but it's easy to go to the South Rim and go to the Skywalk and stop at that indigenous center and go stand on the rim. And you know, go to Guano Point where there was a mine that actually had a cable that went across to another cave that they mined for over a decade from bat guano and, and that's at the same place at the Skywalk is well you can go there as a tourist no problem. However, I cannot believe how hard it is to get on the internet. I spent hours trying to understand like, how do you get on the river? How do you get on a canoe? Who are these people kayaking, like how to do it. And I gotta be honest with everyone, I'm sure there's a crowd out there that are like, full time hikers and they're into hiking, like I've been a climbing and maybe I would have known if I was a in quotes, real hiker something sure but if you're an average, like if you're even just a semi

bucketlist interested in, hey, I want to I want to get down the Grand Canyon River, I want to I want to get on one of those little kayaks around the Horseshoe Bend. It's really hard to do unless you're there and suddenly there's all these signs that say, outfitter will, will will put you five hours on the river for honestly pretty cheap to \$300 like finding a way to do it. When you do I can tell you there are multiple Outfitters, you generally only have to be booked out two days to seven. And you could get in a kayak it near page, and you launch from the river. And you get to go around Horseshoe Bend, and then they they zoom on down with motorboats. They pick you up, and you sit in a boat and you go back through Horseshoe Bend. And that's not a bad deal for a couple 100 bucks. Yeah, but good luck trying to figure it out. If you haven't done it or been there. It's really frustrating.

39:07

Well, what was it like

Chris Jordan 39:08

for you to have your Navajo guide with you? What what what did they or did they provide any kind of insight or lore to the area that you guys were exploring?

39:23

Yes. So for people listening, we were based we stayed primarily in Tuba City, which is on Navajo Nation. It is not a big town. It is about it has three very well it has at least three very nice hotels. And ironically, it has like four of the biggest fast food places you could think of, but it has a really cool little local espresso shop. It has a Starbucks in their grocery store. But this town is literally about a mile long on the main street with hands Extra chickens. It has at least one. It has a Taco Bell. It has a McDonald's. It has a subway. I think it has a really okay. I happen to like pizza. I don't care that it was the only thing in tuba, one of the only they had a pizza place that was really, really, really good. And it was an and there's only one mile in tuba so you guys won't miss it. It's by the grocery and the independent espresso shop they have in town. Here's what's really cool. It's right by the Navajo. When talkers Museum. Oh, wow. And unfortunately, that wasn't open. And for those that don't know, I'm a huge world war two fan. My grandfather was a tank commander that landed at D Day in a tank and was in a tank through Belgium, Holland, France for a battle the balls and all the way to Berlin in a tank. Wow. And I'm a huge history fan of that era, that kind of actually what for those that didn't need to know, that's what from from the minute I could pick up a book. I started with picture books when I was really young. But for the minute I could go to the library and learn about history. I was into dinosaurs right away, like I don't know if it's like genetically built for boys. But I or just young kids in general. I was researching about this from the beginning. So the wind talker museum was closed, unfortunately. And I really, really, really wanted to go in that because it was right there at tuba. And they have a field that was one of the inspirations for and what are the reference points for Jurassic Park. And it is a bog that, of course has hardened after millions of years. And this bog has footprints, it, it's insane. It has so many different kinds of dinosaurs footprints, and dyno poo, rocks and rocks of dyno poo everywhere. And here's a picture this guy's a pterodactyl comes flying out of the sky. And when they land, you know, they don't nail it on on one like they don't stop, they hop. And I got taken by my guide to where the

pterodactyl landed, hopped three times, and then he could tell where it started walking. There's that much detail Wow in Tibet, and this site folks is free. You just have to go. You just have to go. They have the locals have booths set up and they have some of the most beautiful, locally sourced stones generally locally sourced stone, so like stuff from the grand canyon itself. But but it's all handmade, native art, and it's stunning. All of its stunning, and there's something and even if you're not like if you're thinking it's going to be just very like wild and eccentric. It's not there. Despite when you think of it being like, oh, it's gonna be Southwestern art, some of it. And I do design build, I gotta tell you some of its very contemporary, and the range and you get to tip so here's the etiquette tip, your tour guide, and they take you out and as long as you want to stand and I got lucky it was freak weather in Arizona. Most people know it's over 100 It's incredibly hot. While we were in the field, Rex and Shawn del our guide, and I enjoyed the perfect most beautiful at Forest degree days while we were at the rim of the canyon, and about Tuba City. Right out of town paths that cool pizza place is the dinosaur tracks. And, and when I say track at all, there was a track there that was from one of the biggest not a Brontosaurus. I apologize it it's bigger than a Brontosaurus. And they said it shook the earth when it walked. And there are also footprints there from that spitting dinosaur from Jurassic Park. There There are tracks from Oh, there are potentially I did I asked to see them. But there are three footprints that look like human heel half human footprints. And ie up so that that should be my standout part of the conversation or Yes, so this is this is some of it. And now Now if you look on your left there, those are bones there are bones on site, there are whole bone sets still at this site. And folks, I'm not under exaggerating this field as far as Okay, so if you pause right where you are now, that one that you're circling on, that's kind of like they built by the way they use dyno poo a lot of the rocks that are around the Dyna Sir bones that you're looking at that picture are actually pieces of old dinosaur poo. And then but what else I wanted to point out as far as you can see in that photo, its tracks there every square inch their their tracks on top of tracks, you get to walk right on them in them. That big one you're looking at in the middle is one of the ones that shook the earth and they had a tremendous amount of amazing Well, it's like they're that picture on the right below the wall with the guy with the hand there. The next photo that kind of starts to give you an idea how many tracks and it's incredible and there's so it goes on for acres and acres and acres. And as I am there, and I'm looking around now in the distance so yeah, you roll up you can see almost one of the one of the there now the etiquette is they take turns deciding who's going to guide you out into the field. And what they're doing, you know, when when you ask how far you're interested in, in going. I had elven Yahzee and he is Navajo and has lived in this valley for 17 generations. And Elvin does also private tours. So here's something else I would tell you that's off the beaten path. And if you weren't listening to this show, and us talking, I don't know how you would know about this, but Elvin is a private guide. And if you want to go up into the hills, he's been there for 17 generations while Navajo and there are hilltop abandoned, Anasazi ruins and bones Anasazi Way before the Navajo. There were Anasazi. And one of the things I asked all that was, I explained my book that we're looking for ancient megalithic ruins. And I think one of the most underlooked areas in our entire country is America or in the world is our country, America, that the dolmens in Montana, the singing rock mountains, there's more than two, and that there is just this solid indicator that there must be larger pre Clovis advanced abandoned ruins. So I asked him I said, Are there anything rock cut? Is there anything that looks like it was from another era that doesn't match? Navajo or on Anasazi? And he goes, yes. And they're up in the mountains. And he goes, I know I based on your description. I know what kind of ruins you're looking for. And I asked Alvin, what do you do and, and one of the things I'll be releasing, is Elvin talking about all of this. His encounters with UFOs. Ironically, how's this one for you UFO people out there. That field of dinosaur footprints is and has been by his by the way, I did not explain anything to do and I'm, I'm an ancient history. I'm an ancient true seeker as far as like, field researcher, I'm not looking for UFOs I said nothing about UFOs. I haven't even given him

the title of my book yet. I don't think he volunteered that there is a tremendous amount of UFO activity over this dinosaur field. Wow. And he's encountered on the ground, a cigar shaped UFO and a saucer over over the last. I I was a young man and I will not out him for being an experienced man likely in his 60s. But he, over the course of 40 years has had two encounters. One was he saw a cigar shaped UFO from a distance. And I got video of him talking about actually being able to walk right up to one of the saucer shaped UFOs. Wow. So that activity is I guess, frequent in that area.

 48:54

The Anasazi ruins are real and they're in the they're in the bluffs of surrounding this field. And so that along with the uranium tailings, and a missing Kincaid cave, led us down to looking at some other areas for Ks. And the point the point is to we were trying to find a location where I have to show up with a group of climbers with 1000 pounds of gear. And it's not a one day climb. This is a set set to climb over the course of a couple of days. And it's not a make a cool hard route. It was how do we make a safe descent 2000 or 1500 feet? Yeah, to just get down and photograph an interesting cave, right? Well, we never, we never found it. And that that initial trip will now lead us into a new trip where we go for the thermal imaging. And we definitely like I said release some things on the LEED project, but as far right it's nearly inaccessible. So if you don't believe me, don't go looking for because this is hard this is

 Chris Jordan 50:01

from King Cades report itself.

 50:04

That yeah, so I would

 Chris Jordan 50:07

impress but the cavernous, nearly inaccessible The entrance is 1400 86 feet down the sheer canyon wall, it is located on government land and no visitor will be allowed there under penalty of trespass, that the scientists wish to work unmolested without fear of archaeological discoveries, or being disturbed by curio or relic hunters.

 50:30

Yeah, there is no cave there. You know, that's the thing about when you go with actual, and here's the thing, good luck trying to find anything without the local indigenous support and help. Yeah. And if you if we didn't have that support and help, we went to bed there. And the reality is that it's not there. So where is it if at all, and this isn't a period where to paint everyone a picture? You know, Machu Picchu has not been discovered rediscovered yet. Colonel Percy Fawcett has not lost his but again, in the Brazilian Amazon, you know, that's still pending, you know, in 1907, you know, you're dealing in an era of this heightened frenzy of

archaeology in Europe in Egypt, you know, in rediscovering and really, really, really going after the pyramids, Flinders Petrie is, I don't know if he's even alive by 1907, Flinders Petrie has done much of his work. And they, you know, there's work in Egypt in the 1870s 80s and 90s, that are really, really really garnering a tremendous amount of excitement. And, again, National Geographic is all over doing some pretty cool work. And by 19 Oh, 708, if you wanted to make a name for yourself, I think there's a lot of reasons. This guy, if he existed, would want to say what he's saying, Yeah, you know, to become famous. So I am leaning on telling you that we don't have any other info than these two articles. And a lot of people have a lot of opinions on it. But I just got it in me. It's like, okay, we need to climb. We need the gear. And we just didn't know where the cave is. And

 Chris Jordan 52:11

it's interesting, because we actively have more evidence about giants in America than we do about this.

 52:22

Yeah. And here's the thing that the cave, so one of the one of the push backs would be, well, it's not where you think it is. And it's like, look, he describes the Cago rapids. There's only one place that the rapids exist. I mean, well, they're the they're the rapids, you know that this, he names these rapids. And the mile marker where this is, it's the same, this is the location. And we didn't look and just like, you know, a few 100 feet, we photographed for miles, within eight miles to 10 miles we photographed beyond over and past where this cave is supposed to be. And we photographed exactly where the cave would have been looking up and down the entire length of a dish, windy miles of the river. So we didn't just go to the one point, but we went beyond the rapids. We went to the rapids, we went past the rapids. And there is no, here's the other thing. He says from the river itself, you can't see the entrance. But he had a hunch, follow that one, folks. He had a hunch. And he made an effort to go up 2000 feet 2000 feet to get to this cave. Allegedly. But oh, I can't hear you.

 Chris Jordan 53:54

I'm sorry. I think this is a great point for us to take a break. Because when we come back, what I want to do is take this story in into the modern age and marry it with the concept of lost technology, things that we have known for 1000s of years as a humanity and just kind of forgotten and kind of marry that with the with the article that we were talking about at the beginning of the show that we posted about NASA bringing in Catholic priests to advise on how to how to introduce the topic of aliens and alien life to the public. So I think about that while we're taking this break real quick, and when we get back, we'll get into that and so much more folks with our good guest Jared Murphy. Author of it's not aliens. Worse, it's us discovering our loss history that more at night aliens.com We'll get into it right after this.

 55:47

With the rise in

Chris Jordan 55:48

attention to the health benefits of cannabis and cannabinoids, including CBD, drew him science has become one of the premier providers of full spectrum CBD and CBD related products using a proprietary spideroak process. Through him science extracts maximum benefit from the whole plant buds, leaves, stems, seeds, even roots. Every part of the plant is used and then reused to formulate a rich, complex profile of CBD, CBD derivatives and terpenes guaranteed to provide the relief and benefits you need daily. Visit true hem science.com to experience the best CBD oils, edibles and topicals on the market today and use code curious seven to save 7% off your entire purchase of \$50 or more and get to 25 milligram CBD cookies or brownies for free. That website again is true hem science.com in the code is curious seven. The curious realm Podcast is your source for the latest and greatest news and events in the world of the paranormal, esoteric and forbidden knowledge. And there's no better way to spark the conversation than with items from the curious realm store. Choose from fan favorites like hoodies, mouse pads, coffee mugs and more. Buy books and items from your favorite curious realm guests. Get your hands on the latest gear for paranormal investigations and experiments we discuss on the show open your web browser and stop by the curious realm store at curious realm.com forward slash store to buy the latest curious realm where and out of this world gifts for yourself or your family or a mind that you want to open. That website again is curious realm.com forward slash store Have you considered starting a podcast? Looking for a way to make your business a voice of authority in an industry? The podcast Cadet is the solution for you. Whether starting a podcast for yourself your brand, business school, church, or just playing fun. Podcast Cadet is here to help you navigate the waters of the podcast industry specializing in one on one consultation and training with industry professionals in fields ranging from podcast technology and editing, to distribution monetization and even social media strategies. Podcast Cadet tailors their services to the specific needs of you and your podcast. Do you already have a podcast and trying to find ways to engage and grow your audience? Sign up for your podcast Cadet audit today and let us help you explore new and exciting ways to leverage your content and elevate your podcast brand a whole new level from consultation and workshops to affordable podcast production and maintenance packages. Podcast Cadet is your one stop shop for everything podcast related on the internet. Visit podcast cadet.com today to sign up for your cause. certification or training, and use code curious, wanting to save 20% off your entire purchase. That website again, is podcast cadet.com. All right, thank you so much to all of our sponsors for everything that you do for us. It is because of y'all that we get to have the great social media campaigns that we have, that we get to go out and do. All the great stuff that we get to do our website, our app, everything else could not happen without our sponsors. And without your support, stop on by curious realm.com forward slash support today, you can buy a cup of coffee, you could buy a cup of coffee every day for a month, or one day a month. If you wanted to. Numerous options right there, stop on check it out. Curious wellmed.com forward slash support. The website of our guests this evening is not aliens.com. And our guest is Jared Murphy. Jared Murphy. Welcome back. The conversation pivot point right now is lost knowledge. The concept of we spent the first part of the show talking about this new documentary that you put out terracor which is which is I've watched the first few minutes of at the beginning of the show. It's interesting, like you were saying to start going into nanotechnology used by ancient civilizations, and high technology of construction used by ancient civilizations that we aren't even using today. Yep. Now, to kind of bring that into, into lighting into focus for this last part of the episode. Let's kind of switch gears a little bit into how this last knowledge is brought back to light. Was it completely lost knowledge was

acknowledged that has just been kinda lost to the greater, I guess? Greater mindset of humanity? Or how do we go about rediscovering this, and how do we go about taking knowledge that has been hidden, and starting to reveal it?

1:02:32

It's so interesting, because it's been years of, you know, we've really accelerated I mean, we literally have grandparents and relatives that are alive when there was just a horse and buggy. Yeah, and those people can remember a time without even a train. Yep. I mean, they really they we really can go back another 100 years from their time from when they were kids to the invention of the steam engine and almost the industrial revolution. So well, basically the industrial revolution. So for us, I think we're very, we're limited in what we're thinking it at 10 to 15% capacity brainpower where I've described that we're on a planet that's really in safe mode. And I say that because the level of technology that as you said it, we haven't reached the ability to do what you're seeing with not just polygonal construction, but our own genetics, we're seeing a connection in the engineered soils, the ancient engineered planet, had soils like terra preta, not terracor, my documentary, but terra preta is a type of engineered soil that's not only found in Brazil, it's found in northern South America, Central America, it's found. terra preta is found in the savannas of South Africa is found in North Africa, it's found across the world. Now, terra preta, should not be in just one, you know, it shouldn't be the identical system. And what's more important is that they haven't figured out how to copy it. And that's what sent me on a three and a half year search on my book, which was, you have a missing ancient advanced society that was creating a soil that could filter for all of those wondering about a global warming. This is a society that was managing soils, I think, to do that to manage carbon dioxide, heavy metals. It wasn't just for growing it's the most rich growing soil on Earth itself replicates. It has pz electric properties, which leads us to these giant polygonal walls, which has again the ability to connect and send and receive frequencies and signals. And then the people were designed that way and then we think of have large bacterial and fungal networks which, for a long time, we thought that panco the living tree system, which is dying, and was over 80,000 aspects, it was a single, it's a single living entity. And a lot of what we chuck chuck chalked up to biology evolution, just a natural in quotes random event, I think reality is that there is a advanced ancient human society that was global, that terraform the planet that created biotechnology, just like their terror, they're just like, they're polygala construction, they weren't just advanced and laser cutting rocks, to travel 1000 miles to build complex walls to manage earthquakes exactly in that building. From hundreds of miles under the ground. They were using the machines that could measure those frequencies and energies. There's indications of the math for that and Egon values and the form of pi, and these large energy frequency multi use machines like the pyramids. So without getting into all of that, part of it is how do we not see it? How do we not see the ancient 747 Jumbo Jet? And then, and then yeah, and then on top of it, we have 1000s of years, the last 6000 years, we think that's old, and we have all these various religions and belief systems. And because we were once genetically plugged in, and this will bring us to our aliens. This is a planet that right now is explaining that you and I could go buy a gene CRISPR. And we can start making custom babies right now if we want. But this is a society that had taken engineered soils that we literally don't know how to make to this day. We're the modern versions. bioterror as we've talked about it on the show, but for those of everyone listening to talk about how do we get to aliens? Well, what we have is an ancient society and what I try to tackle in the book, which is why there's going to be sequels and revisions coming in and a nude, I am working on another documentary that's going to follow up and piggyback on this one that's on not aliens on and on YouTube, not aliens, but the terracor documentary is that we were genetically customizing ourselves to plug in with

the URL to the machine that we were making that we think of is a random amount of nature that just happened over time. I think we're devolving, you know, we weren't 10 to 50% conscious 12,000 20,000 100,000 or pre Mount Toba 75,000 years ago, I think we were at 90 or 100% conscious. And we were plugged into a system, which included bio full planetary terraforming to the point where this entire system did work together at one point, but the bio genetic technology so I've talked in the past about superhuman abilities like Wim Hof. steek seven said, the abilities to consciously control your immune system, your eating your cooling, your second sight, remote viewing things that we drink up to various things. I think that this society was fully aware, just like all the other frequency energy technology, rock cutting, rock moving, it wasn't about rocks, it was about a full building material, completely science doubt ancient human society that if you are going to run around, let's just ask this question for everyone who's familiar with some Airforce technology and the F 20. twos and they're so advanced that the weapons systems and some of the systems are direct mind control with the pilots? Well, let's say you as a human race, have all this ancient advanced technology. And you're using what you think are again, natural systems to create a large bio motherboard, that law How hard would it for you to do zero point turns in a mock 25? Zero point turn a cigar shaped UFO? How hard How hard would it be for you to move around in space if you weren't maybe more transparent? Bigger onboard infrared eye control? There's a whole I'm a fan of some TED Talks. They're they're amazing. One is with a neurologist professor, I should get you that one. Just 29 minutes about the human skin can actually see interpret your stand infrared waves and energy from the sun your skin can actually just like military pilots can control jets. If you had an anti gravity saucer That turns at the speed that your skin that your eyes can tell it. Would you look like a human today? Would you modify your bod? And would you appear alien? And the first words out of our tripped up natural history museum, rock bang and displayed. Dire rabid brains can get our heads around is will it like, yeah, they evolved into that? No, no. They designed their machines. And they designed their bodies, and they were talking humans. They're not it's not about descendents. It's not about evolution. It's about literally choosing to engineer a body and mind that matched with your, with your equipment.

 Chris Jordan 1:10:49

Yeah. And I see a little, I've got an article highlighted here that we covered in 2018. When it came out from futurism.com. As of today, signals from the brain can be used to command and control not just one aircraft, but three simultaneous types of aircraft. Justin Sanchez, Director of DARPA, as biological Technologies Office said, according to defense one, and defense one is like, that's like Jane's Defence weekly. That's that's like the weekly white paper for the defense world. Like, if you're an arms dealer, that's what you're reading, you know,

 1:11:26

what are we selling next week in Iraq?

 Chris Jordan 1:11:28

Yeah. So that was 2018, that they were talking about a pilot being able to control not one, but three independent aircraft with their mind,

1:11:39

and that's, and that's why when we say it, oh, and this article comes out and says, I, NASA's hiring priests. And there's, there's two things one is, and I think this is true, is really depressing. But, hey, we're sorry, we don't want to have the discussion with all of you that a bunch of our made an underground into very large, safe zones, but a lot of you didn't make it after the Mount Toba explosion, or we didn't let you in. And based on genetics, then the answer tall, the Denisa van, the humans, at a minimum, just after Mount Toba at least over 50,000 years ago. Yeah, the survivors on the planet, they bred together, they survived together. But it doesn't mean that it's a different race, or reptilians, or anything else. What it means is, is that a group of humans did not include another group of humans, and they were on their own. And we a bunch of us on the planet survive. So what's our ancient advanced relatives supposed to do? Are they supposed to show up and say, Hey, we're really sorry about not letting you guys in the bunker 80,000 years ago, or 100,000 years ago, and then, and then they get out and they're still doing them. And that includes very advanced machines and flying machines and continuing to play with their genetics. And it's not because of evolution. It's these are perfectly normal humans what they do do not look they may not look human, or they may appear in quotes godlike, or they may appear like evil looking, or however you want to put a label on it in the last 6000 years, but they're just very advanced humans that survived an ancient cataclysm that was once a global society. And what does that mean then? To a belief system? I grew up Irish Catholic. I grew up very Catholic.

Chris Jordan 1:13:35

So we're former Catholic seminarian right here.

1:13:39

So here we go. So we know perfectly well, there's no life anywhere, Mr. Seminar other than Earth, right. God didn't make didn't make didn't make life anywhere, but are

Chris Jordan 1:13:49

well, well, and that's just it. And that is one reason why I think that NASA has specifically brought in these theologians from the Catholic Church is, is that the and this is the Times of India article that I've got up on screen right now folks coming out of Jakarta. But I think the whole reason is many years ago. I mean, number one, the Vatican has had a Vatican Observatory at Castel Gandolfo since the 40s 50s. In Italy, in the in the dormant volcano. On on top is the Pope's Summer Palace, Castel Gandolfo, which is where the Vatican Observatory is. And not many people are aware of the fact that the Vatican really kind of muscled its way past a whole lot of paperwork to get a mountain top in Arizona.

1:14:51

Oh, Lucifer.

 Chris Jordan 1:14:52

Yeah. Yeah, like like they got this whole mountain top for astronomic. observation. And years ago, the the official, the official astronomer for the Vatican came out in the Vatican has had numerous, not not like papal decrees or anything like that. But numerous announcements that should it be found that there is life outside of Earth. It does not conflict with Catholic doctrine. It does not conflict with the sacrifice of Christ, it does not conflict with any, anything that the Church teaches as far as the salvation and the salvific act of Christ. That's a huge announcement for the Catholic Church to make, like, huge announcement that missed a lot of people's radars, and really should have made a lot of people perk up now a long time ago. And this was way back in the dudes and beer days, when we first started having people like you on first started having people like Dr. John Hall, the person will remain nameless, because in the community is pretty high up. Like, there, there are a couple of stations out there that would not exist, putting out this kind of information if this gentleman hadn't started them. And when I invited him onto the show, he saw Dr. John halls episodes and things like that. He was like, listen, I enjoy the content you're putting out it's really great. I just do not do public appearances anymore. There are way too many scientists I know that worked for NASA that have died in mysterious circumstances. And there are way too many people in the UFO community that have died in mysterious circumstances. Over the last many years. I just care too much about my family. I don't I don't appear on shows I don't speak publicly anymore. Anything like that. It was like wow. And then he was like, if you'd like to know why we can take this off of and the social media platform is to be nameless right now. So that people don't try to track him down. But literally, we started going back and forth and messages Jared and he was like a long time ago and he basically started laying out Project Blue Beam. And for those of you that are not familiar that Project Blue Beam you will you will not find any official PDF or anything like that there is no official leaked document about Project Blue Beam. This is just a theory that has been floating around in the community for decades, that the government or interested parties will fake a UFO invasion after soft disclosure and set this up as a means of control over those of religious mindset. And, like it's out there, but it's one of those like, you know, talking about a just number one or a religion that I'm Catholic, I'm not gonna lie Hey, man, we're right after that we're in the middle of the Christmas season technically. Till epiphany, then you can take down the decorations. Please God take them down. But even that, you know, even you will in Saturnalia, like, again. That's what we did. Man was like, hey, yeah, you got you get a celebration in December. So do we. Should we check it out? This is what we do. Oh, that's what you do. Oh, so easy to convert. Come on over.

 1:19:06

So have you not heard Nat King Cole or burr lives or Bing Crosby? Yeah, have to

 Chris Jordan 1:19:12

it that's just it, you know, that means of disseminating information, disseminate, disseminating a hard message to the masses. They're pretty decent at. They're pretty good at it. And when it comes to not only possibly because the one thing we've held on this show the whole time since all of this kerfuffle started with Lou Elizondo was that Be careful man, what you're seeing is

what's called soft disclosure. The only way that the next technological leap will be able to happen will be for this technology to be out in the public. And the only way for that to happen is for them to admit that they found some Duff decades ago.

1:20:03

Yeah, that's the thing decades ago, I know.

Chris Jordan 1:20:06

And that's a hard pill to swallow. That's a hard pill even for a lot of people to swallow, that there was something we found it we reverse engineered it. And that's where we got this technology from.

1:20:19

While the worst is that if there are humans, whether they're more advanced or not, if there were there are great, great, great, great, great, whatever grandfather's and the idea to think that they thought we were too devolved, or we are too devolved for them to share. Like, yeah, we could have cured cancer years ago for you, or we could have ended this blighter. Or we tried. But yeah, you know, you know, Bill gave you religion, look what happened,

Chris Jordan 1:20:46

the doors that it opens the Pandora's box of knowledge that it opens, Jared, is massive mass.

1:20:56

And you and I have talked about this. But if this society, again, if you just look at the facts on the ground, so the large buildings, the antiquity of man, like these Klerksdorp spheres, going back two and a half, 3 billion years, if you look at all the things that indicate that a human society was here in an advanced state, well, we also then have to jump to is they've already left the planet that they already had satellites that they already had space traveling activity. So if those people had left or worse, what if we did start on Mars? What if we started on Mars and then moved here? Or vice versa? Obviously, Mars is no longer in living condition. And obviously, Earth is but what are we going to find when it comes to archaeology? If you could throw any TV show I'm a sucker for space archaeology, you know, anything, you can combine archaeology and space archaeology and the idea of advance, you know, like altered carbon stuff? Yeah, I, I would think that there's going to be a point very quickly. Well, they've already they're literally it's like a shaggy song. They're standing in front of the most advanced crap on the planet going, it wasn't me. And I was like, No, seriously, that was you? I caught you red handed. No, it wasn't me. I mean, it's like, advanced humans. Are there aliens, it's easier so that we have two fronts. One is, we're not admitting that very ancient advanced humans made it on this planet.

And two, we're not very far now from having to say, and I think here's what's annoying to me. They are more quickly going to say, well, there's bacteria live on. On Mars, there's bacteria, which we've already they've already said it. Yeah. And that hasn't made anyone. We

 Chris Jordan 1:22:42

just found a water reservoir the size of the Grand Canyon. Yep, under the surface of Mars, confirm and solder on Mars. Right. And

 1:22:54

that was supposed to be the big nerve tick for everyone for these. Now, I can think of a few Christians off the top of my head just in this world. That I mean, like in the world of Christianity, I can think of some individuals that will not accept life outside of Earth. Like just any life. They really. I mean, I mean, there's plenty of guests. I know, like Jim Willis, there's plenty of people that we both talk to that. I mean, they're living in the hardcore bible belt, and they're not going to, they're not going to accept one that the earth is 10,000 years old, right? or less. And there's definitely not life on Mars. And what are you going to do with that? You know, if you're, you're

 Chris Jordan 1:23:40

they're not lying. There is not life on Mars. Was there life on Mars? Quite possibly.

 1:23:49

Should we not? should not bring up the trial bites or whatever they are? Oh, yes. Cute. Those things are so cute. Yeah. The intergalactic roaches?

 Chris Jordan 1:23:56

Yeah, and they're

 1:23:59

everywhere. I mean, they live without oxygen. They they live in space. They're there. They're just there's no and again we're not Oh, oh, by the way, we use the car to grow tardigrade. Yeah, yep, yep. But what are those non carbon based life forms that we just discovered at the bottom of a couple of those sinkhole cave things in the water? Yeah. So we have we have non carbon based life that we have now discovered on Earth. So problematic. Yeah. Yeah, on carbon based life is a problem if it lives outside of the planet and so I do expect so I personally have a lot of I'm excited like everyone but I am not going to spend the hours that some people are spending a photos on Mars, mind you, we're not getting rough. If there was remotely two aliens

punking us they have all like scrub the feed. You know, we're not seen what NASA has seen, and I just love it when people like we got the raw feed. We didn't get the raw feed, it got scrubbed eight times.

 Chris Jordan 1:25:07

Yeah, yeah. Yeah. And there was somebody in the group not too long ago, because I posted a VR image from the new rover. That was a 360 degree painting image of the sky at night. And they're like, oh, that's all that's all fake. And in computer generated, I'm like, Well, no, like, here's the 200. Like, literally, here's a \$229 vr 360 degree cam made by Samsung. Like, do you think they don't have one of those? On the I don't see a boom arm on the where's the arm that's holding the camera? There is no arm. It's 360 degrees. It's directly under the camera.

 1:25:53

Yeah, yeah, there's

 Chris Jordan 1:25:54

a level of technology that we have. And is it a live feed? No, it's not a live feed, whatever's happened to like they send up directions, and then come back like 15 hours later. And they're like, Okay, let's tune in and watch the results.

 1:26:13

Right. And that's it.

 Chris Jordan 1:26:15

And there's just numerous times where they send wrong directions or bad directions and like, the rover shuts down or the rover goes to the utter wrong place, or just sends back error codes 15 hours later, you know,

 1:26:30

they're dealing with and we're old enough to deal with a 14 four modem

 Chris Jordan 1:26:35

and here you are, like complaining about zoom lag people.

 1:26:40

Wait till you deal with it, if any of them. I wish we could set up a experience of a 14 four modem for people. Yeah, that's not a 28. Not 56k a 2014. Four and you have no idea what slow means? Yeah, don't

 Chris Jordan 1:27:00

there is no cooling response to cakes.

 1:27:06

There's there's no overheating your computer, you're going to be fine.

 Chris Jordan 1:27:09

Well, and you know, with all this in mind, like I said, the to me the whole reason that NASA has brought these religious experts aboard is because when you when you're dealing with something on the level of paradigm changing, paradigm shifting, you got to ask people that are used to shifting people's paradigms?

 1:27:37

Well, you know, herein lies a great TV show you've found human skeletons remains fully advanced ancient human advanced, ancient abandoned base or war torn, destroyed epic cities across Mars. And let's just say that the military isn't I always thought that they were 5060 years in advance and the numbers I'm hearing now are 150 years advanced? Well, let's just say that that's true. And they've actually been working on excavating and or working on remnant abandoned satellites select just take moons like Phoebus or you know, like, or the just the moon itself. You know, we think it's hollow. Maybe they've already started sorting things out on the moon. You know, Asimov said it. I think the first person I have heard since Asimov interviewed about this 40 years ago, he's like, no significant space travel for humanity will happen until we get a significant, significant level, a significant presence on the moon. Yep. And we really need to be on the moon, we need to be we need to have a decent sized city with 1000s of people. We need to be on the moon and that and I don't follow him too closely, but I am very impressed is Elon Musk. He said we need to get a base on the moon. And I'm like someone anyone finally with the means and the actual, like, a is making the effort. It's yes, we need to be on the moon and yeah, what are we going to dig up? I mean, if there's

 Chris Jordan 1:29:21

because you like Good lord. I did. I did a report on the possibility of a Mars mission. When I was at college, what was it like 1989. I was in like ninth grade. My freshman my sophomore year of high school or my, my fall semester of my freshman year of high school. And literally even then NASA was saying, in order to ever reach Mars, we would have to have a presence on the moon and not just like a presence like a base. where you can start to refuel you spend three quarters

of your fuel exiting Earth's gravitational pull. Yeah. Now once you're once you're out of that, you're your acceleration goes up exponentially because you no longer have the pull of gravity and whenever you add to that it goes up even more exponentially. And you know, there's another article from NASA right there about the water that's recently been found on the moon and surface water. surface surface water not not even like the water on Mars, where it's like, hey, here it is under the Grand Canyon equivalent surface water. And here lately, you had China's you lose satellite, going to going to check out the quote, mystery hot on the moon, the large, just square obelisk off in the distance, there's the there's the folks. One of the many lunar anomalies, but hey, don't worry, you know, good guy hope they don't find like a bunch of monkey skeletons up around that thing, like 2001 status. Yeah.

1:31:19

You know, we're constantly mistaking one of the things I like to point out is we've learned how to Biola as an brick for your fireplace, that they've created bacteria that can grow brick into any shape you want. Well, there's examples of Honeycomb stone, all over the earth. And so if you could create a self sustaining, Sun driven, hot solid state flash driven, satellite, it look like an asteroid or a meteor. And so our idea of a satellite or clunky metal technology, versus a solid state propulsion and anti gravity, what looks like a space rock, the reality is that I am making bricks out of fast growing mushrooms. So there you go. But the I do think, are dealing with this ancient advanced human race, having gone out to the moon, possibly, you know, the Black Knight satellite, or Erich von dannegan, I got the privilege of speaking with him a few times. And he suggests that there is evidence from, again, sources that don't want to miss their families, that there's at least six or eight other satellites in orbit that are not following the course of of standard. Our technology satellites. They're, they're a couple 100 miles, they're past our orbiting satellites. They're much older, they're over 18,000 years old, and that they're in the Earth orbit. And how many of those of course are being tracked or already very well established and aware of and classified for NASA? We don't get to know it's frustrating.

Chris Jordan 1:33:08

Yeah, yeah. No, and that's just it. There is no I've got I've got actually gateway to astronomy for or astronaut photography of Earth. And there is one of the famous images of the Black Knight right there.

1:33:25

It's a space blanket. It's not real, don't look at that.

Chris Jordan 1:33:31

And, you know, it's just, that's one of those that there's an ongoing hypothesis about it. But there are numerous things out there even like a Musa Musa that recently passed through the solar system. They they're they're numerous people like MIT level people, Harvard level people that worse swearing it was an interstellar satellite, that it was an interstellar probe sent to Earth. Its trajectory was too odd. The way it came in and out of orbit was too strange,

everything. And to think that once again, much much like our good guest, Stephen Myers points out to think that our ancient relatives did not or could not have this technology or knowledge is the purest form of haughtiness.

1:34:42

It is because that technology on the ground indicates it ancillary technologies that would be as advanced so if you're cutting up giant 1200 ton stones and matching them to earthquake technology and frequency and energy work, and you're doing genetic material elation. You're doing planetary terraforming, you're using crystal silicon technologies. You sure the hell are building satellites and you're doing a lot of other work that is probably in the world of weapons terrifying. And if you're living 10s of 1000s of years, or not dying indefinitely, and managing carbon emissions planetary for a population that was probably much larger than where we are now. Here's the scary thing. We're so primitive. When we think of satellites, they've done two things. So we assume ancient people would have done two things, they would have made a satellite that floats around the earth because we need television. And two, they would send out satellites, like Voyager that would eventually run into stuff that would be recovered by William Shatner and Star Trek. But for that sarcasm, think about it, folks, if you're a society that lives through multiple cataclysms, and even with all your advanced technology, what if you've already learned as we are starting to that impacting a floating or an asteroid in space takes many, many millions of miles to correct its course. What if you had a very ancillary, weird orbit of like an object that passes by our planet in a very strange trajectory, as was just described by our host that was in an orbit that was always orbiting 4000 years, or 1000 years or 13,000 years, one of the orbit of that probe was an alien, but was the early warning system to avoid planet killing 65 million year old dinosaur destroying Greenland 819 mile diameter impacting off the southern coast of India, you want to see a terrifying impact we had look at the crater off the south coast of India. But if you had a society that lived through shit like that, or didn't want to get hit again, would it behoove you to have satellites that orbited our planet, but in such a wide elliptical, that it may be even traveled to beyond the edge of the solar system? And that in quotes comment, or that every 75 year, you know, that they're not just random Hale Bopp comets that are actually part of an early advanced warning system and Hubble telescope of 100,000 years ago, that was snapping photos, setting radio. That's the other thing, folks, a lot of these instruments that were taking photographs of the far reaching universe, the radio telescopes, do not take pictures, they take radio signals. And so when you see a picture, it's an artistic interpretation is really just radio signals bumping into things. Yeah. So the this thing that skimmed the earth was probably if it was unintentional, elliptical, advanced ancient satellite. It's never said, Well, maybe it was communicating with what what would have been a receiving signal point, could it have been our bliss? Would it have been a pyramid would have been buildings and constructions that were made out of other building materials that of course have turned to dust or been destroyed and forgotten and lost before the Younger Dryas after the Younger Dryas readapted, and sharpened into pointy sticks by our dynastic relatives. But the reality is, if I was an advanced ancient society that didn't want to get slapped God smacked by another 90 mile wide, terrifying multi, you know, kiloton impact. I would want satellites, traveling our solar system in various orbits, returning for potential repairs, expanding and extending, so that we have a heads up so that we are not impacted again, so that they could send out weapons and chips to change the course of planetary destroying our but but but we don't think like that. Well.

01:34:42

Chris Jordan 1:39:15

But the thing is, we do think like that we think like that. Currently, right now. We have un teams working on that we have NASA teams working on that we have whole concepts of like, let's deflect an oncoming asteroid or celestial body with the satellite. Now, what you have to remember is that ancient cultures thought about that. When you're talking about comets, which are recurring signals of doom in the sky. When you're talking about meteor showers which are recurring signals of doom in the sky. An anger of the Gods coming at you. They had they had hope, go cults and you Even the even the kings of countries went to the high priests in the astronomers for advice. Like they devoted entire parts of their culture, to the study of astronomy and these celestial objects and these things that came in and out of known observation. They're not momos of anybody, they had a bigger idea of it than us because they didn't have light pollution. Like, you can hear about the Geminid meteor showers that happen every year, every year. Good luck seeing them if you live in 60% of the United States, which is which is the inhabited part of it? Yeah, you will not see them, despite the fact that there are Bo lights and like in like straight up things besides a Volkswagens that you can see with smoke trails behind them, you won't see them against the city lights.

1:41:05

Oh, yeah. This this is just a good example of when we look at our like, right now, there's so many trends in the last few years over Archeo acoustics Archeo, genetic Archeo genetics is now a big one. Yeah. And I think the thing that's going to be a real killer, the reason NASA and I think so there's I think there's a lot of things coming to the head with what the I don't want to be the think tank that's going through the scenarios of I mean, there are people out there killing each other in the name of their belief systems. What are you going to do? Yeah, you'll on what are you going to do when you reveal on one day, not only is there myopic, but biologies on the other planets. But when you find skeletons, when you reveal that there are ancient humans living here, if you were to do one of those things, but if it all comes out at the same time, and then on top of it, now we have, unfortunately, no going around it. We have nano archaeology. Yeah. And they've done sedimentary nuclear DNA on not only like in the Denisovan cave, this to give one example, they found using again, these are just molecules just just bits, dust, they've, they found 157 species of animals, plants, Flora, Fauna, and Denise event out of out of dust. So you are not going to be able to avoid if you don't no longer the narrative for our history is a joke. It's way beyond broken. And the colleges that be and the people who are like I literally had a dialogue with a friend, who has a friend who's been an instructor, a teacher, a professor for 40 years. And the dialogue was, well, this what you're teaching isn't true anymore. And the teacher and the professor says I absolutely, yes, it is not. But listen to this hubris, this and this ignorance. But I don't want to not teach it because it means that for 40 years, I've been wrong. Yeah. And I don't want to be wrong. Yeah. That was their that was their answer. Yeah. That how much more dangerous to truth knowledge and the search and rescue of what could be some cancer curing technology. From our advanced ancient past that that attitude, you could use a

Chris Jordan 1:43:33

bit more in the face of literal science, then to say that one of the big statements we make on the show all the time is science is not static. By definition, it's not static. Static guess what, by all science in the 1500s the Earth was flat yo earthers are writing solid written less. And my

whole hypothesis with that is timezones. That's why they exist. If people are up and walking, then the Earth doesn't rotate. Right? Right. Right, that timezones, we might all go to sleep at the same time and, you know, illusion dissolved. Right? But there's so much new data out there like I was popping up some stuff on screen a while ago about new studies that are using nits, using nits from lice on mummies to help track the migration patterns of people and to help to help actively tell back that we find genetic lines using using lice.

 1:44:53

Yep, and they're the indication but at this to blow everyone's mind, nuclear sediment Harry testing includes flora and fauna off the seafloor and saltwater is so damaging yet, they were able to plug out some sand under collapse doggerland, which hasn't been above ground and over 6000 years, but again very contemporary pre or post Gobekli Tapie but back to 18,000 years. So vary from Scotland to France that was above water, and they're pulling up. Sedimentary remains under despite ocean currents, and 1000s of years underwater, they have pulled up in in the granular sands of salt watered sea beds of the Baltic and of the English Channel. They're telling us the flora and fauna of doggerland from 1000 plus years ago. So the idea of academic hubris hiding in what they haven't want to do, listen, we have whole practice skulls. One of the preferences in my book is to talk about the practice of Peru. But there are naturally born elongated skulls to humans all around the planet. And there's not one multi billion dollar Yale Oxford fill in the blank. There's not a single big time, Ivy League, whatever, pick a big school don't care. None of them have done the genetic testing, had the balls to do the genetic testing. And it has nothing to do with it's a cowardice to test the practice. They don't even need the DNA. They don't even need the sedimentary rudimentary objects. But how are you going to continue to hide 1000s of bits of information that are going to show ultimately Denisovan Neandertal humans all living side by side, elongated skulls to humans, a number of other species we've never even heard of because we have a fractional Ragan

 Chris Jordan 1:46:51

man. That guy who knew Dragon Man that was just found in it was just a myth was just a story. It wasn't even like a local story. This dude like found a skull and threw it in a well and told this kid on the desk on his deathbed like, oh, yeah, by the way, there's this creepy skull, but I found out in the well, you may want to check that out. And then he died. And sure enough, there's like a whole new race of humans found that are like nine feet tall, with twice the size of normal humans.

 1:47:28

Right. And so there's enough out there, including these elongated skull, people that if any one of these schools were about truth, and actually figuring things out, they would just go after the facts and continue to evolve. I had no idea that the game of popularity was worse than science and even school.

 Chris Jordan 1:47:47

Oh, it's horrifying man. It's horrifying, you could not get more religious than what science is

Oh, it's horrifying, man. It's horrifying, you could not get more religious than what science is now,

1:47:57

literally. And I literally I really, and I believe that the people listening and the people enjoying these shows that there is active genetic memory going on and all of us that we have 1000s of years of either our own or embedded memories from from not just relatives, but from, I think the collective human consciousness, I do think that there's a reason people listening shows that we are actively a part of de, or at least knitting the Afghan back together have to what, what all of it means I do think that the Yeah, I'm out there doing field work. But I do think everyone listening participates in a way that adds to that, that collective consciousness and the if we I wish we could sit here, I want everyone out there to know that although we're throwing it out there because I think it's already in the back of our head because we're doing this is that by saying this, it's helping crack the thinly veiled shell of Yeah, academic hubris, but at the same time for those of you who have had your own hunches, and going out there to seek the truth. This isn't because I think those institutions or you think these institutions are going to come around for us, they'll they'll do research that won't get them in trouble. But I need them I need it on the table so that when they find a whole bunch of genetic and tissue and sedimentary DNA data that they don't throw it out because it's anomalous. Yeah. Yeah. Like they

Chris Jordan 1:49:20

precisely precisely it's one of those that even talking to people like Craig wall heater, about about Bigfoot, things like that other other cryptids literally nothing aside from a body. Yeah, well, into modern science, nothing. Nothing. Well, not and not unfortunately, iterations of anecdotal stories that match from numerous cultures. Not, not other anomalous samples, anything else? Nothing short of a corpse.

1:50:00

Well, so, for me, that's what Well, between quantum mechanics, quantum engineering, getting into quantum computing and nuclear DNA testing, they're not gonna be able to avoid it when they can go in and lift all the flora or fauna and species of and, and, and individual minds, you're not just species, an individual animal dies and turns to dust. And in that dust, they're able to say there was a coyote in here, there was a parrot in here, there was, you know, whatever, they can literally break it all down down to insects, and we, they're screwed now. So the body's turning to dust don't matter the level of every society form of the gin, I mean, imagine going into a city that was buried in the sands of Egypt. And that city was built out of the remnants of a pyramid, and being able to reconstruct not only the city and the way it was stacked, but from those pieces, you can say, well, there was like 100 million pieces of this pyramid that they use to build this wall for the city 4000 years ago. But that wall, when we put those pieces back together, based on the pieces we found in the dust, those pieces correspond with the side of these polygon walls, which appear to fit on the red step pyramid, which would have been from 46,000 years ago. That's, that's where we're headed folks. That's happening.

Chris Jordan 1:51:22

Chris Jordan 1:51:22

Yeah, it gets just that detail there. I mean, simply go watch an episode of Oak Island folks, and and see what they can do with laser ablation. You know, just literally hitting something with an ultraviolet laser and detecting the particles that come off. They can not only tell what percentage of lead something is they can tell what what year range it was mind in. And because of the other elements with it, they can tell specifically, what range of the world that comes in, like down to the mind. Down to the mind. Like yeah, came from this mind in this city?

1:52:07

Yeah, we're really close to where it's, it's not avoidable. You can't hide it. Yeah. I, I hate to think that a lie

Chris Jordan 1:52:17

will be harder to sustain than the truth soon enough. And you know what, just saying in that right. gives me another big reason why they brought in members of the Catholic Church. Like it's a horrible truth. But think about it. And that right, folks? Eventually, the lie will be worse to sustain than the truth than just owning up to the truth, admitting it and moving forward from there.

1:52:52

Do you think it will be a truth? Or do you think it'll be another half truth with shallow lies?

Chris Jordan 1:52:56

I, you know, I think that there's going to be there's going to have to be at least a half true at a minimum a half truth. I wouldn't say that. They aren't going to try to sustain other lies other and yes, yes, every bone inside of me that was ever a youth minister and every bone inside of me, that's a father, that kid in the room next door to me, says, yeah, if you're withholding truth, that's technically a lie. Every bone in me. So if you're willing to admit that, you know, I mean, that that's a big part of my separation with my faith is the conversations I've had with spiritual directors of mine and things like that, that were like, seriously, dude, you asked me to accept a lot of spectral evidence. Every single Sunday is a point of faith. But you're going to literally tell me that there is zero doctrine on ghosts, or the paranormal 00. You're going to tell me that there's exorcism demons literally stalking my soul. Right, and that I need to accept this truth over here. But this one, which the other one kind of can't exist without? No, dude, nah, we can't talk about that. And that's not acceptable.

1:54:35

There, there are so many things that we could do a whole nother episode about what doesn't,

 Chris Jordan 1:54:39

you know, at some point, that that that loop of logic collapses for me. There is a significant catch what's going to happen for a lot of people when when this stuff starts coming out, and I think that that's exactly why they brought people from the church in because a lot of people, period, whether you're talking religious, political, what not? Jared, they're gonna have a crisis of faith and a crisis of conscience, man, they're gonna have a paradigm shift that they do not know what to do or how to deal with. And unless you had unless you had that spiritual crisis in life, that makes you question literally who you are down to the core of fiber of who you are. You're not going to know how to deal with this when it happens. Ya know, and that's hard, man. That's a hard truth to even even just fathom. Right now that we're on the cusp of, we're on the cusp of that.

 1:55:47

Yeah, there is a number of things where people's, there are a number of people that don't want to change. From there. They have their lives figured out in a way that doesn't they don't want a spiritual conflict. They don't want any kind of a theological or emotional conflict with what they've experienced, either personally, or even as a family tradition.

 Chris Jordan 1:56:10

Even what they experienced from last Tuesday, man, can we have some regularity? You know what I mean? Yeah, like

 1:56:17

darts, or darts or Thursdays pool clubs. We don't play pool on Fridays. Yeah,

 Chris Jordan 1:56:21

like we can't even figure out whether or not it's safe to go to a Knights of Columbus meeting Jack much less whether or not you can go to Christmas with the family. So what is the normal what what is the reality? What is the truth? You know, and as we say, on the show so many times that truth is a filter. truth The truth is filtered from your reality. And from your experience. That's why two people that grew up in the exact same house one year apart with the exact same parents can have two totally different stories. Yeah, yep. Because their experience in their filter of that is 180 degrees, separate 180 degrees different because they're different people. They process things, they filter things differently. They think about things differently. So I don't think that there is a universal answer, that I think that there is a capital T truth out there. And I think it's going to be really a really, really rich, thick pill for a lot of people to swallow. That's all I feel like if you've if you've ever, like if you've ever taken like a fish oil pill and had a bust in your mouth, it's gonna be like bad, folks. You're gonna be dealing with it for a minute or two. All right. It's, you know, and it's not going to be a great sensation, or flavor or experience amongst any of it. So yeah, yeah, I think I think we are getting ready for a huge

paradigm shift, huge paradigm shift right now. And that's what that announcement, I think, really kinda drives home. I think it was kinda as so many things in the world to stop disclosure are Jared just kinda announced with no fanfare.

1:58:30

Well, it would be funny if it's like, all of us have to be prepared to know what's wrong. I mean, I mean, to know that we start with a theory. It's not about being right. It's just like, here's the facts. Here's what we can conclude from the facts we have, or suspect but then okay, well, let's keep digging and keep digging it that, oh, well, this was wrong. But this was right or this wasn't and none of it was right. But it put us in this one direction. And that's where we should be excited, including these old institutions. You know, they should be excited to pull out old finds reexamine the nuclear, sedimentary and DNA testing to go after. What are likely answers that are way beyond what they thought?

Chris Jordan 1:59:14

Yeah, absolutely. I could not have said that better. Jared, thank you so much for your time. Tonight and always man, even in our private conversations. It's never not deep. It's it's never not explorative no matter what we're talking about together and tonight was very, very much the same. Thank you so much. For everything always.

1:59:40

Well, thank you so much. Thank you for having me on. Thanks for everyone for listening. I appreciate it. I'm looking for it. Yeah, you know, check me out at notaliens.com or you know if you could support me there and sign up great. Otherwise, just just go to my YouTube channel and subscribe on YouTube. Yeah, aliens.

Chris Jordan 1:59:55

Yeah, absolutely. Stop on by check that stuff out, folks. Make sure to stop on by enjoying his stuff you get some some great announcements from him. Make sure to stop by and check out his new documentary over there terracor That our ancient past revealed just the few minutes that we watched the beginning and the later parts going into nanotechnology, things like that. Absolutely phenomenal information. Jared, please do hold the line while we close things out. While you are online checking out everything from notaliens.com Make sure to stop on by Facebook, other social media join curious realm. Just Google curious realm that's all you have to do. Look, I'll show you right now. Just how easy it is. Curious? Well, and you can see we are pretty much the entire front page of Google Look at that. Everywhere. Everywhere you want to be folks. Stop on by check it out. Curious realm is the name curious from.com is the website curiousrealm.com. Forward slash store is the source forward slash doc support is the support page. Until next time, take care of yourselves take care of each other and remember, stay curious. We'll talk to you soon. Bye bye. Thank you for tuning into this episode of The Curious realm.
