## SPEAKERS

Chris Jordan

---

 00:00  
Okay

 Chris Jordan 00:04  
attention attention, you are listening to a pre recorded episode of The Curious realm. Various Rome was busy traveling the vast void of time and space to find the best paradigm changing content the universe has to offer. Enjoy the following transmission and remember, stay curious curious. Coming from the city of the weird exploring topics from the esoteric and unexplored, two dimensions are known. Shining a light of truth on the darkest corners of our reality. Welcome to the curious realm Well, hello, everybody and welcome to this pre recorded episode of The Curious realm. I would like to thank our guests this week. Ella Bain as well as Mary Joyce for being able to meet early take care of this I actually went through spotter surgery Monday, Monday afternoon, so thank you ladies for being able to spend the time with me early. Been looking forward to having you both back on or Well, yeah, back on the show because we have had Ella Bane on before we met her at the MUFON conference. She is the author of The Amazing book series, who's who in the cosmic zoo a guide to ETS, aliens, Gods and Angels. We will be talking with her about solar anomalies, as well as other sky anomalies, messages, things like that poor tense in the sky, so to speak. And then after the commercial break, we'll be joined by Mary Joyce, who we usually have on to talk about the world of she she has a great book about deep underground military bases around the country as well as that technology. And we've also had her on discussing Cherokee little people, the many many stories of the Cherokee Indians and the little people that live in the woods actually near where Mary lives so we we talk with her and her website. Spaceships guy shifts over cashiers about Mars anomalies and Arctic anomalies as well as anomalies on the moon. Are these remnants of past civilizations. Are they thoughts in present day? That's that's even some of the question when it comes to ETS, that kind of stuff that we discuss regularly on the show is what we're seeing in the sky on all these videos actively extra terrestrial or is it something that is much more homebound that we are testing against ourselves and even putting out as means of disinformation to well allow for new technologies. So we'll be getting into so many topics this evening with the amazing Ella bein. While you were online checking out everything from Ella

make sure to stop on by our other guest and friend as well as sponsor Dr. Kimberly McGeorge the secret to everything.com. That is where you can go for alternative health, frequency healing and consciousness expansion. Expansion exercises. Stop on by the secret to everything.com today, let Dr. Kimberly McGeorge know what you need and let her know that curious realm sent you. While you're online, checking that out, make sure to stop on by curious realm. That is, of course where you can find all the episodes. That's where you can follow us on social media down here. tons of links, if you our listeners of podcasts, and out there on various platforms guaranteed. If you're using a platform, we're on it. You could also download our free Android app. All you got to do is click the image and bam downloads to your device. So stop on by check all that out. And of course never ever forget the amazing Facebook. That is where you can come by join the curious realm group and join the conversation. That's where we pull our news from the week every week. This week out of news on Facebook, out of the New York Post flesh eating drug tranq meme for animals now linked to 1000s of heroin and fentanyl ODS. And of course, this was a huge announcement out of Gizmodo James Earl Jones signs over the RAPP voice rights to Darth Vader. Now, this was a topic that we talked about back in our dudes and beer days, regularly in the idea of AI the idea that Adobe actively released a software close to seven, eight years ago now that you as long as you have 20 minutes of somebody talking, you can actively type anything and it will say it in their voice. James Earl Jones has actively signed over the voice rights to Darth Vader. So now, this AI company, which is part of the deal, can literally have James Earl Jones voiceover Darth Vader into infinity and beyond. You know, because it's Disney too. So yeah, yeah, groundbreaking groundbreaking things going on right there. out of fortune.com. The US who ordered 171 million updated COVID booster shots, but only 4.4 million went into the arms as in winning two arms. As Biden says quote, the pandemic is over and out of cnn.com Once nickname murder propolis the city that became the city of the quote defund the police movement is grappling with heightened violent crime. That is just some of the news that is fit to print folk stuff on by joining the conversation on the curious realm group there on Facebook. Of course. Once again, while you're online, make sure to stop on by who's who in the cosmic zoo.com That is the amazing series of books by our guest here in the first segment. Ella Bane. Welcome back to the show. How are you doing?

07:04

Oh, hi, Christopher. Thanks for having me. It's wonderful to see you again. Absolutely.

Chris Jordan 07:10

Same same I love following your adventures online. You were always on social media posting things. You much like me are apparently a science freak. You you actively studied at I'm trying to remember the observatory.

07:28

In the Hayden Planetarium in New York City, yeah.

Chris Jordan 07:33

So you know, you've you've got a little bit of science behind you. And, and the work that you

So you know, you've you've got a little bit of science behind you. And, and the work that you have done on on who's who in the cosmic zoo is absolutely amazing. I've had a chance to go through and read probably about the better half of the first book now. Since we met. And our conversation the first time was amazing. And we both got into the conversation of anomalies and anomalies that have been happening not only on our planet, but all over the solar system. For the last little bit, I mean, there was just recently the new picture of Jupiter where it showed the the plasma storms in perfect geometric shapes.

 08:21

Ran it was blue.

 Chris Jordan 08:23

Yeah, yeah. Really wild

 08:25

stuff. Yeah, that was amazing.

 Chris Jordan 08:28

When I decided to have an episode about anomalies and solar anomalies and sky anomalies and anomalies on Mars, you and Mary, were the first two that popped into my head. So I'm so glad to have been able to get to get both of y'all on to talk about this topic. You were actively just at a conference this last weekend giving a presentation on these things. So let's let's start off with some with some solar anomalies. And how you first came to be aware of these?

 09:07

Oh, well. I guess it started in the mid 90s When I met Zacharias session, and got to interview him. In a one of a kind conference. It was called one cosmic cultures neat, and it was in Washington, DC. And he just pretty much opened my eyes to a lot of what was happening and also what has already happened in the past. And that's why we study history because it repeats and hopefully we learn its lessons. Sometimes we don't, but it fascinated me. So I just delved into his Earth Chronicles and, you know, tracking Planet X and Nibiru which is what seminarians called it, it has many names depends on the culture. You know, the Greeks called it her Copalis the Chinese called it the Red Dragon. Hebrews even they called it the destroyer. So, got my attention for sure.

 Chris Jordan 10:23

But most definitely and to know that even now, there are numerous models to show that there is something that is helping influence things at least on the outer part of our solar system.

10:42

Yes, indeed, it is. Our solar system is perturbed, you know, perturbed sounds like disturbed and it is the sun is perturbed because of the plasma exchanges that is happening with this system. I call it the Nemesis Nibiru system, because Nemesis is the black star. And yes, the ninth planet is real. And that was Planet X, the blue planet which ties into the Hopi prophecy of the blue cucina, where they said, first you're gonna see the blue cucina. And now we see this blue planet which they've, you know, reordered the the numbering of it now they call it the ninth planet because they demoted Pluto. But Pluto is still a planet. And you know, Sitchin called Nibiru, the 12th planet. So there was a lot of controversy over his work. So I have that in my fifth book, *The Heavens*, I've devoted a whole chapter to him and what went on, and especially the relationship between him, and Robert S. Harrington, who was the chief astronomer of for NASA, in the 1980s, and 90s. And he, you know, NASA has been tracking Planet X Nibiru since the 50s. And in 1982, they sent iris which is the infrared space camera system. Yep, that went to Pluto. And, you know, by the way, the, the NASA Chief still considers Pluto a planet. So for the aerospace engineering people, Pluto is still a planet. So this whole controversy of demoting it and re numbering it and renaming it. I mean, there's a lot to be said about that, which has to do with what they've been doing with the calendars and the you know, they've been changing time. And this has been going on for millennia, where they changed the calendars a few times, and there's all these different calculations. And then, of course, the church of Rome. They had their can, which is what we're all going on. Now. The Gregorian calendar, which doesn't make any astronomical sense or a numeral logical sense, because, you know, we're going into the month of October, which is eight. You know, November is nine December is 10. Yet they reordered it, because they added the Emperor, so the whole thing's a mess. And and it reminds me of that Chicago song. Does anybody really know what time is? Yeah. But, but anyway, back to Nibiru. So yeah, NASA has been tracking it for decades. And so Robert, is Harrington had data on it that was from their technologies. And he and Sachin actually sat down and had an interview together, and they compared notes, and Sitchin was, was getting his information from the past from the tablets, and they corroborated together. And that was amazing for both of them. The only they had some slight differences about, you know, how it was going to come in, you know, like, like, you know, one said it was like Virgo, the other one said it was Libra close enough, you know, in terms of the sectors. But one thing that then everything went got weird, because they because I think they corroborated and confirmed each other's research. The powers that be, I don't know, didn't like that. And Robert has Harrington at the age of 50 comes down with some very rare form of esophageal cancer and dies and that was That was it. And then they sort of got a little heavy on Sitchin and said, don't we don't want you telling anyone, when Nibiru was going to pass the earth, and, you know, I sat through multiple lectures of, some of them are online, and you know, people could watch them. And that is just the number one question that everybody in the audience always asked. So when is it coming? And he was always very tight lipped about that. And I met him in, like I said, in 1995. And that was a year after the his encounter an interview, and also after Harrington died. So he was a little shaken up, you know, and, I mean, he went full, you know, he had full strength all the way until 2010. Until he passed, he was doing lectures. And he, you know, they, I have a whole chapter dedicated to him, because, you know, if it wasn't for his work, we wouldn't be using the word Nibiru, because he pulled that out of the Canadia forum tablets. Yeah, amongst other things, as well. And, you know, so I was inspired by him. And I guess that kind of got me started on it all,

 Chris Jordan 16:21

ya know, well, in a, you know, rightfully so. Because when, when you meet somebody have that type of learn skill set, let's just say, and befriend them, there's, there's something special that goes on. And you really do get exposed to a world of study that the average student of such things is not exposed to.

 16:52

That's true. And it's too bad. They don't teach a lot of this in universities. In fact, I was just talking to someone at the show, and they were telling me, she was educated in Texas, and when she was 28, and when she was going to school, they were talking about you know, Planet X, and then Planet Nine, and, and she got very intrigued by it, and then all of a sudden, everything went dark. Like, it just they just stopped. They wouldn't say anything. And this, this is what has been going on. Because, you know, for decades, it was in all the astronomy magazines, which I prove, you know,

 Chris Jordan 17:31

and when it a Planet X was conversation from the time I was in junior high through college,

 17:37

right? Right. It was just common conversation, everybody's looking for it. And that's how they found Neptune and Uranus and Pluto was all because they were searching for Planet X. And they saw perturbations on these other like Neptune was perturbed. So they something had to be beyond Neptune. And then they discovered Uranus. And same thing, Pluto and then something's perturbing there. And so there has to be something else out there. So now they've come to the you know, and this is out there plant they call they're calling a Planet Nine and it's out there, right, you know, on the edge of the solar system. And it's huge. But that is not Nibiru, Nibiru is red. So like the Hopi pop prophecy talks about the blue and red Katinas. And basically they say, Well, when you see the blue cucina know that the red cucina is going to follow. And so we know that that Nibiru the red, which is also called in the zohore and the Torah, the Messianic Red Star. So again, we get the color red, and the Chinese called it the red dragon because it has a tail it has two tails, which are looked like wings, the plasmid wings that are full of all kinds of junk and debris and you know, this is so it basically, the tail precedes it so we're see that's what we've been seeing it since 1994. When, if you remember Jupiter was hit with those string of comments. Yes, you

 Chris Jordan 19:19

make a left Shoemaker Levy. Hmm.

 19:22

And, you know, created holes in Jupiter. And now as you and I speak, we're speaking under this

Jupiter transit where Jupiter is the closest it's been to Earth in like 700 years and if you see it every night, it's like super bright. Oh, yeah. You've seen it. It's it's pretty cool. Yeah. Even without, you know, telescopes or binoculars. You just can't miss it. So it's it's kind of taken the hit for Earth many times but you know, the prophecies say that Earth is supposed to get hit by warm wood. That's an Book of Revelation and, you know, Wormwood means bitterness. So it seems like it's probably going to be a an asteroid or a comet that comes out of the system. Just to put everybody at ease, the the planet Nibiru is not gonna crash into the earth, it's going to pass the earth. But you know, the passing is is still going to devastate the planet and, you know, yeah, it's just the book of Isaiah. Isaiah talks about that the Lord is going to turn the earth upside down, which is basically biblical vernacular propulsion.

 Chris Jordan 20:41

What you which we are square in the middle of geologically right now. Even whenever we had you on last time, we were discussing the fact that that's right. Geologic North is floating about three quarters of a mile a day.

 20:56

Yes. Right. Exactly. Right. We are in the

 Chris Jordan 21:00

middle of precedented distance. Yes.

 21:03

And that's what's causing a lot of the craziness. And, you know, the auroras that we're seeing on the Colorado Wyoming border, you know, the walrus or that's what they call them Northern Lights, because they usually up in the north, and because the magnetic poles have shifted about 48 degrees and still going, it's coming further south. So you know, that's evidence that you know, in the earth has wobbled and you know, it's got knocked off the axis. But you know, what's what's even more? Disturbing is sorry, that's my cat just means a big talker.

 Chris Jordan 21:49

Yeah, nearly 30 to 40 miles a year.

 21:54

Oh, my goodness. Wow, that movie that you pulled that up so quickly. You're terrific. Yes, that's, that's, that is exactly what's going on. But you know, what else? You know, the magneto sphere has gotten those a crack in it. Yep. So the sun is is is just like it's like birth pangs. Birth contractions were they just these solar flares and coronal mass ejections that are coming, the

sun is just belching them out one after another. And, you know, some of them are Earth facing, and the ones that are Earth facing they, they hit us and it caused, there you go, you got that the crack in them in the magnetic field well done. And that's what's been happening. And so that's why the auroras are so bright, and they're coming further south. And even though they're beautiful to look at, and you know, the photos are stunning. That's not good for the planet.

 Chris Jordan 22:57

Yeah, no, absolutely not. The magnetosphere is quite literally what protects us from the bombardment of cosmic radiation?

 23:06

Yes. That's unfortunately, what we're getting.

 Chris Jordan 23:11

Well, and even the fact that I'll pull up, I'm trying to remember where I saw it, but Earth's magnetic field is actually actively slowing down.

 23:26

Hmm. Because probably because of this, it's just not functioning the way it's supposed to. Yeah, I mean, the fact that it cracked me, though, the worst fear of all the astronomers and scientists who study this is the dreaded X class CME, because that's the one and then there's different tiers of it, x 1x 2x. Three, that can basically put us all back in the dark ages, you know, knock out all the satellites, knock out our power. And, you know, at some point, when Nibiru passes the earth, that will probably happen. But we're still in the first paying contraction phase, so to speak. So you know, there's going to be two passes. One as it passes the Earth, it goes, it's going around the sun, it's, you know, being drawn around the sun. And then when it goes around the sun, it gets energy from the sun, and then the sun is going to catapult it back out on its orbit back into space and pass the earth the second set, second pass, that is when the final pole shift gets completed, and it just flips. So you know, at that point, this is probably why they're all you know, wanting to go. I say back to Mars, because the the ancient records was that they were there. You know this this semester happened, which caused Mars to become evacuated, and everybody left Mars and came to Earth. And now they want to they know that something's going to happen to the earth. So they want to go set up colonies on Mars. So I think that's kind of ironic way. Well,

 Chris Jordan 25:15

you know, which, which at the same time would, would utterly be affected in the same way?

 25:22

11 25:25

Yes, it could, and there's no guarantee is not going to get perturbed and hit as well. Absolutely.

C Chris Jordan 25:28

We are very close very close cosmic neighbors, closer than anybody else. So which is why we go there so frequently, and so easily. Yeah. Because if caught in the right path of orbit, it's all of a 90 day journey to get there, to get supplies, whatever. And there have been some amazing discoveries on Mars as of late, you know, the, the discovery of actual lakes under the surface of Mars. Here recently, it was actively the discovery of organic matter.

11 26:12

Yes. Oh, and I believe there's life already there. Mainly living underground. Yeah.

C Chris Jordan 26:21

Yeah. And I tend to believe the same thing, whether it whether it is life as we know it. Intelligent Life, I don't know, but whether whether or not there could be animals of some sort, things like that. Absolutely.

11 26:44

You know, the Andy Basiago reported, because allegedly they time travel there, and he saw three types of life forms. And, you know, one was, like A plus A Soros type. He described it like a big lizard type creature. And then there's like, the greys, and then there's, you know, human. Yeah. So, apparently, that's what's going on there. I haven't been there. So I can't speak from experience. It's just what I'm hearing well, well,

C Chris Jordan 27:19

you know, there there have been numerous air quote, whistleblowers that have come out in the past many years. Yes. And so the veracity of their stories, I don't know, but their stories and claims are incredible.

11 27:35

They are, they seem to corroborate so.

C Chris Jordan 27:39

Yeah, and, and, you know, even even to think of the possibilities that we had, had, we never actively stopped going to the moon and even to think that, you know, the Space Force is

anything new. I mean, we've been we've been tinkering around in space since since the days of Sputnik, and we haven't stopped.

28:02

Yes, I agree. And they just keep renaming things

Chris Jordan 28:06

well, and let's let's start getting into some of these anomalies real quick, that have been caught because of our tinkering in space because of things like the ISS camera because of things like Let's find it here. So which one is it? Yes, I was just about to see So solar observer This is one of the videos that you provided to us of something massive and this thing was marked near the Sun for free if I wrote If I remember correctly for like two weeks

28:44

Yes, just kind of looks like it was refueling. Yeah, I get like it's the sun is just a giant gas station and it just, you know, suck it up. Nuclear energy and yeah, yeah, what what hell is all the stuff all the good stuff, that's what that is like cording, if I've ever seen it, and then it just pops off. I mean, that's not a doesn't look like a solar flare. It's looks like intelligence. And that's what you know, when we see these spherical objects that are showing up regularly in the space telescope in the Soho Helio viewer, the coronagraph telescopes there, they're showing these big, large spherical objects so some of them are planets from the Nemesis Nibiru Sun is one that we know goes around the sun every 28 days and it eclipses the sun every 28 days. This is not it. This is more of a what you're seeing, I believe is a is like a spacecraft of or a mothership of some kind. I mean, it looks like intelligence. It does not look Like a coronal mass ejection, because we've seen those, those horrible. And this is like some object. And you know, there's another

Chris Jordan 30:14

one you can you can clearly see in that one clip that just passed a coronal mass ejection happening. Like as it takes off. Yes, as it leaves. So you can see the natural process going on right next to this.

30:29

Yes. So it's something else. I mean, there is another, you know, belief or train of thought out there that that there are solar cores, little baby sons that the sun is birthing. And that one just, you know, flew the nest, but I don't know, it looks pretty big. And it looks like intelligence to me. So, I don't know, but it's definitely not a not a CME. And then, you know, we're seeing the objects these, these planets that are moving in a rate like the one that we are seeing every 28 days is is cyclical. So, you know, there are spherical shaped craft. I mean, every time we see something round around the sun, people immediately think, Oh, it's a planet. It's an XM moon it

could even be a large mothership. A space Sure, starship or spacecraft, you know, so we don't know. But one thing we do know is that it's happening regularly. I mean, we are seeing it often. So and then the spaceships the ones that actually look like ships that, you know, like bird wings like Phoenix, like the Starship Enterprise, the Millennium Falcon. Yeah, yeah, those. I mean, they're showing up on a regular basis

 Chris Jordan 31:59

in these things. Now, granted, once again, folks, pre recorded episode. So, teaser, we get into these totally unrelated guests. But we get we get into these Phoenix shaped craft, with Mary Joyce in the next segment. And how interesting there is these these things are massive. Yes. Huge on the order of I believe one of them was almost the size of Jupiter.

 32:32

It's just unfathomable. In our minds, like how do you even? I don't know. But I mean, that that there was a video that I sent you that really looks like a, like a big weighing bird like the fee. Yes, that one. And that was just sitting above the earth for two months. And you see all these little scout ships coming and going in and out of it. So what you're showing was taken from the ISS, from one of the ESA astronauts, the European Space Agency. So, you know, just a little aside for your guests to know that the ISS is share is shared by 14 Earth space agencies. So NASA doesn't rule it. And even though NASA has their NDAs, and they don't want their astronauts talking and releasing these videos, back to us. The ESA is not NASA. So this Spanish astronaut Could not you know, he was like, Well, I gotta I have to take out my cell phone and share this. And once it's on the internet, genie has not gone back in the bottle. So this has been, you know, shared multiple times on various YouTube channels. And all you know, on Facebook, I shared it on Facebook, but this this one is very clear up my other one takes a while to get focused, but you can still see the ships coming and going in and out of this thing. And it was hiring. That is

 Chris Jordan 34:10

incredible.

 34:12

Isn't that amazing?

 Chris Jordan 34:14

And your would be would be incredibly massive. It has to match miles long.

 34:24

.....

And what a lot of people have said online you know is that it looks like the cling on warship. And so it's like this is where the truth is stranger than fiction.

 Chris Jordan 34:35

No, I will say this. I will say this. Just as a point of looking at the footage, perhaps Perhaps maybe a failed umbilical like they tried to do many years ago. You know? Where they tried to they were trying to gather energy from the ionosphere with like a large umbilical cable that was like two, three miles long. And then it ended up getting severed. And it's the video that you see all the time of other little orbs coming up around this thing. And they're like, remember, this thing is like miles long. So these things would be hundreds of feet in diameter, and they look like little doughnuts that Yes, coming up around it. So and that's kind of what that looks like to me. But even still, the stuff coming up around it. Once again, the sounds coming to and from it.

 35:40

I have never seen anything quite like this yet. Just intelligence. That is remarkable. It is It looks like a big bird. And, Nick, I am really

 Chris Jordan 35:50

glad that we took the time to get this footage.

 35:53

Yes, yes. Thanks for your patience and figuring it out how to put this on. I mean, that was that was really good. But you see that on the bottom there? Yes. That disappears after a while. So that's something that yeah, up into the what looks like the head. And then you see all these little scout ships coming and going. And it literally hung out there for two months. So what was it doing? Who whose was it? I mean, it doesn't look like like the seat like, I don't know, I don't think it's ours. I'll be damned if it is, you know, if it's a secret space, because it's just huge.

 Chris Jordan 36:34

Wow. Yeah, I mean, that is a massive object.

 36:37

Yeah. So that that was just paradigm shifting, jaw dropping when I first saw that, and I thought, wow, you know, and I'm been showing it over the weekend. At the conference here and people are just gobsmacked. They cannot believe that. And then others are just like, Well, yeah, I knew that. I knew that they're here. They're here. It's, you know, because New Agers. They're like, Yeah, look, you see all those are? Yes. Yes, it's and they move. But a lot of people are like, oh,

yeah, we've known they're here all along, you know. So it's really interesting. And diverse the different communities the New Age community versus, you know, the Christian fringe or the science people. Yeah. And they're just Unfortunately, not all on the same page about stuff.

 Chris Jordan 37:28

Well, well, and you know, we had this conversation at MUFON on air, and it's, it's interesting to see so many eyes all over the place, turning from religions, to science, turning to this topic, and considering this topic, finally, a no long term considering it a topic of something that's anathema, but a topic of curiosity, and a well what will we do?

 38:02

You know, that's indeed I mean, and science, I believe is the mind of God. I mean, the further we get down and understand and learn different types of sciences, we're understanding the Creator, because the evidence of the Creator is in the creation and understanding science is just his language in his mind. Or his them, you know, because they, you know, there's a group but well, in that fascinating,

 Chris Jordan 38:30

you know, no, you yourself, just to follow this little rabbit hole first, say you yourself studied rabbinic studies, things like that, correct?

 38:43

Yes, I was educated in Israel and was Biblical Hebrew. Yeah.

 Chris Jordan 38:49

I'm happy Rosh HaShana, by the

 38:51

way. Oh, thank you. Thank you. 5763 5783.

 Chris Jordan 39:00

Is it 5783?

 39:02

Yes, tonight,

 Chris Jordan 39:03

I thought I had it. I was 20 years up. That's okay. But but the point is that, we when you when you put a date, like 2022 on it. It really doesn't seem that old. You know, and, and when you put a date like 5783 on it, you really do open the door to a whole different world of understanding.

 39:33

Yeah, I mean, it does change things a bit, especially if you round it up to 6000. Sure. So you know, and this is what was going on with the church of Rome. And we've you and I talked about this last time and how they manipulated the calendars and they change time and they did and that's the prophecy in the Old Testament about the Antichrist is that each sign that he changes the times and the seasons. And you know, the gorian calendar doesn't make any astronomical sense whatsoever, whereas the Hebrew calendar does because it combined solar and lunar Yep. So, you know, there's discrepancies, there's arguments on all but at least they've been they have they've been consistent. They've been counting. But then before that, that was before, you know, the flood. So they've been counting since, I guess, the book of Genesis when they started out again. Yeah. And then what happened before that, you know, the first one. So, well don't really know what time it is.

 Chris Jordan 40:42

That's just it. I mean, it's, it's the fact of that point, you really do have a much larger worldview, then you have a much larger view of the cyclical nature of humanity. Hmm, as opposed to 2000 years where it's like, Hey, you can argue round earth all day long people, but don't forget, according to our calendar of 2000 years, right now, you know, now granted, that's not like the beginning of humanity. I know. But we're talking about like, after BC, you know, after BCE, like when when people became smart, right? Well, only in the last 500 years, have we fully all committed to the fact that the Earth is round? That's true. Until then you said otherwise, you'd be like driven out of town, you'd be burned at the stake. You'd be lazy. You'd be locked up for heresy jet. Lord forbid you go out and teach it, then you'd be excommunicated.

 41:45

And yet there's still people still Lazard's Luddites lagging behind you still believe it? They don't even believe we've gone to the moon, they don't believe they can get out of the atmosphere. Sure. So there's all this crazy stuff.

 Chris Jordan 42:01

And yeah, people were like, Oh, what about the radiation? You know, when Magellan went over the horizon? A lot of people like what about the horizon? Eight? I guess we'll find out when we

get there, Jack. Like, that's literally the attitude. Yes. And it takes that kind of attitude. You know, we I say it on the show all the time, we need more Magellan, we need more people that are willing to bravely go into the world of the unknown and just explore and be willing to do so. That is that and the more I look at things, things like remote viewing is a prime example. I'd follow the science for years. And and the the work of the Monroe Institute, the work of Sri things like that. Never had it dawned on me that all of the people that started that science, science folks, proven science, all of them PhD holders, every one of them like particle physicists, things like that.

43:05

Well, it's all about energy and understanding it and frequencies and resonances, which will, you know, brings me to the Schumann resonance. Exactly. Which is what's causing all kinds of political spiritual fatigue. Some people call them ascension symptoms. Oh, no, I'm not calling that yet. Because I think it really has to do with the coronal mass ejections. And it's, you know, causing the Earth's hum which is usually at 7.83 hertz, to go way up. Yeah, I mean, some days are worse than others. I know you, you know, feel that and as many others do, and, you know, and they think it's them. It's not them. It everyone is going through this. And just having the symptoms because our DNA is changing, and we have to, through adaptation adapt to this new frequency that is going to be come the new normal of the Earth, because let's face it, what's gonna end up happening, when all of this whole cycle comes to an end at the end of this age is heaven comes to earth and the earth becomes like a star. So that is where the new agers talk about ascension, but also it's biblical. It's in the book of Revelation, and that the son actually is dying. So we are not going to be dependent on the son anymore. We're going to be dependent on the king of the kingdom of heaven, the Son of God, the Sun of light, who's going to be the light of the world to us. And the prophecy says when that happens, there will be no night and we won't need the sun and at And everybody's the curses all the curses, the cursed universe is all going to be lifted. So this is the blessed hope that people are living for and believing on. But this is actually happening. I mean, we're watching this, these are the signs of the heavens that are supposed to happen before this final piece happens. And we have some things to go through before that happens. Like the war, the final battle, world war three, which I guess is kind of being set, the stage is being set now. But scarily enough, yeah, especially, you know, what's what's been happening this past year, but it turns into a space war. Like a real star wars. And this is why my my whole Monica is the truth is stranger than fiction, because we've been given. So, so much of this in science fiction, film and TV, to help us prepare for these concepts that will eventually become reality, just like the original Star Trek, you know, from the 1960s. And, you know, a lot of their their technology that they showcased, is now our reality. Oh, absolutely. There's, you know, like, hundreds of little gadgets and pieces of things that that we have now. So, I mean, that wasn't done by accident. And the same thing with Star Wars. You know, the tattooing where they show the two sons, you know, that was also getting us ready for and we're seeing two sons, I mean, not every day, but it has to do with you know, the light. Because Nemesis is a black star. It doesn't radiate. So when our sun hits it, it looks like like it hits Venus or it hits any other planets. It shines, and it looks like another star. But this looks like two sons. Okay, so you know, that was an they called that Nabu. So Nabu, Nibiru sounds pretty similar. Yeah. So the truth is stranger than fiction. And we were getting these messages in, in the the TV and the movie realm. I mean, even the big sci fi hit series, resident alien, is just I mean, you know, we call it soft disclosure, but some of it is just like, full disclosure. You know, we're lately, you know, it's like, there's a race of aliens on Earth. That is a threat to to the planet, they want to take over the planet they want to take over the world. And, and who are they? They're the greys and who was played by George Tochai? Well, his voice is behind the

gray, which is, you know, makes it fun and entertaining, but at the same time, there's a lot of truth to that. So again, that's another, you know, truth is stranger than fiction. So if disclosure piece, I mean, there's tons of stuff in resident alien about who the aliens are, I mean, he, you know, and you know, that, that Harry Van Der Spiegel, he's the, you know, he's an amphibious alien. So, you know, the reptilians, the lizard men, the Anunnaki, the greys are all his enemies. Yeah. So that's interesting that that's what's put into the script. And that's an all in my first book of, you know, who are the ETS in the aliens? And you know how to cause it, because it's basically a clash between two kingdoms on earth. And this has been going on for millennia. This is nothing new.

 Chris Jordan 48:51

And a lot of absolutely two schools of thought at the same time.

 48:56

Yes. And, and that's this is a controvert. It's an ongoing controversy. Because you have you know, you have the Christian fringe who take one story out of the Bible, which is about the fallen angels, and in the Genesis six, and they think, you know, the where they fell 1/3 of Heavens angels, basically rebelled against the Creator came to Earth had sex with Earth, women who were already on the earth before they came. So story. Well, yeah, I guess so. But they created miscreants, they created monsters. The naphthalene in Hebrew means the fallen ones, the rejects, and, you know, they basically went to law against the laws of creation. So the creator had to wipe them off the earth was another flood and that was the second flood the flood of Noah, and then after that, when the when people got repopulated on the earth There was a different DNA. Because if you read if you read before that everybody was living to be like 900 years old. And now, our, you know, you're lucky if we can live to 120. That's pretty much where the DNA goes. So, so it's a different type of human. And one thing that I'm proving in my book series is that there was a, there's a gene war between the aliens over us. And I also, you know, my fourth book covenants is basically lancing the boils of racism. And, you know, pinning it on where did it all begin with the Anunnaki, who were in, you know, in competition with other groups of aliens over who was going to populate the earth who was going to control the earth, and who was going to control the humans. And I find it interesting that the prophecies and the promises of God, the Creator, the Messiah, is that when he returns, He restores all things. And that is also restoring our DNA back to our original blueprint, which was all 12 strands of DNA, which is, you know, what, what I believe happened in the original Garden of Eden, where they walked with the Lord, and they knew everything, for the curse before the fall. And when they talk about the fall of humankind, I believe that is like a downgrading of the DNA. So, you know, people call it the glory body, and, and, you know, superhuman, and you know, you know, operating firing on all 12 cylinders, so to speak, but that's what we, that's what's coming in the future when he comes back to restore this. And, and all that's happened in between has been, you know, genetic warfare, over different races and different groups, experiments of different types of humans, to keep everyone divided, you know, and it's really the creator's will, for all of us to be united under one God under one universe. And that's what's going to happen after all this gets sorted out, because that's what's it, that's what the prophecy says. So I just wanted to insert that in there for people who are listening. Now to give them hope that this is not, you know, the be all and end all, we're not going to be stuck here forever. And it is changing, and it's changing pretty rapidly right now. So it's exciting that it's changing. And, you know, people

have to be ready to, you know, slough off the mortal coil whenever they get called to do so. And get their souls right with the Creator, because that's where you go back. And that's something that is a discernment about who we are versus who some of these aliens are. And I have that in my first book, where I kind of categorize them as either a soul matrix, or not soul matrix, because they're like, the greys, they're not soul matrix, they're mainly a lot of them are clones, and, you know, hybrids and cyber genetic robots and, and insectoids. And there's 35, according to the whistleblowers, there's 35 different types of greys and, like, in my, in my book, I, I spell it gra why, because that is greys, the species as opposed to GRE why gray the color, because the gray species could be, you know, brown, white, dark, you know, there's like a black metallic color. There's, you know, obviously Gray, chalky, white, you know, beige tan, there, they come in all different colors. So, you know, and they say that they're like, you know, anybody can have a gray, you know, it's like, like robots, and they program them, and they clone them, and they sent send them off to do their bidding. And who are they? Well, the reptilians and draconian Kingdom is behind a lot of that. Okay, and not to say that the that the human ETS aren't using greys as well, they are, but anybody can really program a gray just like you and I were working on computers and, you know, people program stuff all the time. So, so, you know, AI is definitely you know, nothing new. They've been controlling it. And again, this comes out in fiction. And and like if anybody watches Marvel, and saw the loci series last year, I mean, that was what was revealed in in that, you know, it was the artificial intelligence that was behind what he thought were the beings that were controlling say Things That turned out to be these giant robots. And then they find out that it was the lizards that were behind them. Okay, so Oh, is that as another truth is stranger than fiction because that's the, that's what I uncovered in my first book is that the reptilians were were behind the greys that they send the greys to do their bidding. And they are operating from inside the earth. So this is when I think I had sent you this about the controversy, you know, between Yeah, the Christian fringe that thinks that the all aliens or demons, aliens are fallen angels, that's their mantra. And, you know, when when we start off by saying all, you know, already you,

Chris Jordan 55:50

you've got a distillation mentality. So, yeah,

55:54

and it's another form of bigotry. Okay. So, you know, they started out with the Jews, you know, the Jews were considered aliens, and they were all this and all that, and all Christ killers, and yada, yada, yada. And it went down through the ages. And in a way they all the persecution was there to prepare humanity for something else, because they consider them to be alien. Okay, and maybe they are, maybe they came from another star, and they were planted here. And that's why they were so persecuted. I don't know. That's one, you know, one hypothesis, but but we can't broad brush everybody and say, Well, is this and all is that? Because and so what? So the you have the new agers, on the other hand, who a lot of them think, well, you know, if the aliens were a threat, because they're against all the government stuff that did this day of putting out that the that there's an alien threat? Well, if to be fair, if if the government didn't think there was a threat, then why have they kept the secret space program? So secret for 75 years? Put all this black budget money? billions trillions into it, if there wasn't a threat? Okay. So let's discuss what a threat is. Because they say that, Oh, well, if the aliens were a threat, then they would have killed us off by now. But I tell them, and here's my short answer is

that there's worse things than death. Okay, on this planet, there are worse things. There are people that are in all kinds of enslavement, you know, vampirism, all types of persecution being used and abused for horrible, horrible things, okay, and I'm gonna go down those holes and say you use your imagination, this is our history, there are worse things than death. There are people that wish to die, and they can't to get out of these horrible sufferings, okay? So just because a race of beings doesn't kill us off, doesn't necessarily mean they're not a threat to human life. Okay, we just had a huge disclosure dump in April of this year, where the

58:19

the Pentagon the transfer, they 1500 pages were released on the neurological biological effects of a being in close proximity to alien technology or alien beings themselves, all the way from burns, to skin disorders and, you know, neurological problems to missing pregnancies. Yeah. Okay. So, how is that not a threat? Okay, so, you know, there's good ETS, and, and not good. You know, there's the the good and the evil, just like there is in all of us, you know, we have good humans, and we have evil humans, there's, and yes, you know, the Christians have a piece of the story where you know, that they're their demons, their fallen angels, that is one piece of the story, but what they're not getting is the other part of the story. And the reason for it is because the church of Rome deleted 75 of the Jewish texts, which have the other parts of the story, the books of Enoch, the books of Jasher, the books at Solomon, which basically saying, Tell us the story of this ancient cosmic drama that went on between these different groups of aliens. Okay, so if they were so evil, then how come God didn't destroy them? Or Why didn't God let them? You know, what, why did God let them continue on and why are they still with us? Okay, and these are questions I address in my book series, because and this is something I I stumbled upon which pretty much blew my mind. So I put it in my fourth book covenants about the Vatican. Okay, so of all people of all, you know groups and places, you know, who would have thunk it, that they want to lead the disclosure movement, because they want to be the first point of contact when the aliens arrive. Because, you know, well they fit right into the Bible, the revelation, Bible prophecy of the End Times, and the the Antichrist where the, you know, Revelation talks about the city that sits on Seven Hills is the horror of Babylon. And I mean, Rome sits on seven hills. And, you know, the, the church of Rome basically got their ancient religion from Babylon. And, you know, I show this in my, in my slide shows how, like, their garb, the meter, the hat, the incense, the, all this stuff went all the way back to Babylon. And when they, when Constantine came around, and he saw that Christianity was, was spreading throughout the world, and he wanted to control it, and it was like, Well, if you can't beat him, join him. And he thought, Well, I'm not going to join him, but I'm going to bring them and incorporate them into our already existing empire and religion. And that's what he did. But he had to delete the Jews, he had put the Constantine's creed was the church doctrine of anti semitism, replacement theology, they deleted 75 books, they did not want people to know, the truth about where our origins were. So everyone became like a people with amnesia. And now we're starting to get those pieces back. And it's coming full circle with with the endtime prophecy because it says that the Antichrist is going to come through this false prophet who sits on Seven Hills, which, you know, obviously, is the Vatican, and one of the Pope's, whether it's this Pope or the next pope, I don't know. But I find it really coincidental that the Scripture, the prophecy, in the book of Daniel talks about how the Antichrist changes signs, the seasons, and the times of, because they don't want people to figure out where we're at. So they want to control the timeline. And that's exactly where we're at. Nobody knows what time we it is, you know, whether it's 5783, or 2022, or Julian calendar, you know, 111 of something, you know, so it's, they've been messing around with that. And these are the, the powers that be the archons that are, you know, looking to keep everybody enslaved in this, you know, so

called matrix of things that we live in here. And there's only one that said, I have come to set the captives free. And that would be you show up, that would be the Messiah, and, you know, who were the captives, that's us, and free from what the, this this draconian system that everyone has become enslaved in, in one form or another. Okay. So, you know, the whole, and the blessing is that all this is going to end and there's going to be a new world and, and heaven is coming to earth, which is going to like level all this stuff out, you know, the, the racism, the division, all of that, and, and the whole stuff with with what's going on in the solar system. And this is when I started getting into this, Christopher and I was like, wow, that's why because the system is a mess. Okay. And when you study it, you see, well, every time there's a pass from Nibiru, it's not always exactly the same, because this planet is elongated. And it's roguish, okay, it's tilted. And it's not like well, it doesn't play well with all the others. And it doesn't go around like all the other planets do on its own sun, which is nemesis, but it intersects it with us. So it comes around our sun and then you know, goes back around and it's an it's just, it's it. That's why it's called the destroyer by the Hebrews because it creates cataclysms and it bumps into things. The pieces that it's in its tail, the moons, the you know, this is why we've had like, collisions in our own solar system which are evidence of previous passings of Nibiru. Now Velikovsky wrote about Worlds in Collision, I mean, how we got the asteroid belt, which used to be a planet and it's written in the Bible, okay, that there was another planet. So it got broken up into pieces. And that's what you know, sent To the other planets, you know, your your honest, got tilted. And you know, one of the moons became like one of like Pluto was supposed to be a moon of Saturn got catapulted out into the outer edges of the solar system. And there's all these different stories and they're in mythology as well. So we have to be able to connect those dots and see, well, there's must be some truth to it. And why did it happen? Well, because we have this Maverick this, this rogue planet that just comes in and creates havoc every 3600 years, creates all this stuff. So why that the Lord who promises Bolson, the old in the Jewish Bible and at the book in the book of Revelation, that he's going to recreate the heavens and the earth? Why is he going to recreate the heavens in the earth? Because the the old way isn't working, there's a there's a glitch, there's a flaw, it's messed up. So it needs to be renewed, all things are going to be new the earth is going to be renewed. Even the solar isn't in the sun, our Sun is dying. I mean, and that's why, you know, when a sun starts to die, it starts to belch out a lot of current. I mean, this is one of the worst solar cycles we've been in in a long time.

 Chris Jordan 1:06:16

Yeah, yeah. And over the last decade, we've reclassified solar flares, lord knows how many times it's, it's gotten gotten insane. And to the point that yeah, that we have a crack in the magnetosphere. That's been seen. We have numerous holes that occasionally pop up. So it's things I'm, I'm not going to be doom and gloom, you know, things won't happen for a long, long, long, long time. However. Boy, howdy, is there a cycle going on in the solar system that is not going to change for for a little while. So, yeah,

 1:07:04

I agree. And I think that when Nibiru passes, everything's going to change here.

 Chris Jordan 1:07:10

Absolutely. Absolutely. And I, I would love

1:07:13

to be prepared for that.

Chris Jordan 1:07:15

Yes, most definitely. And I would love to have you on again and again, to discuss the topic of Nibiru to discuss the topic of you know, the, the other signs and prophecies that come along with such things. I want to thank you so much. Thank you. I want to thank you for your time tonight, especially in such a crunch fashion. Coming coming out of a conference directly on the air with me. So thank you so much

1:07:47

for inviting me you're back before we

Chris Jordan 1:07:50

let you go. Let everybody know where they can catch you at your next appearance. Where they can go to follow your RSS feed or your blog your videos where they can go to buy the books of course other than our bookstore.

1:08:05

Yes, thank you. I'm met who's who in the cosmic zoo.com for the books and I will be in Phoenix for the International UFO Congress. Cool October 12 through the 16th I'll be speaking on the 16th on signs in the heavens and showing my slideshow presentation with some video on October 16 at 1pm So they come they go to the international UFO Congress. Look that up and get all the info and buy tickets. And I'm also on Facebook, you can find me who's who in the cosmic zoo on Facebook I post a lot of the pictures and the videos of what's happening around the Sun both ships and planets and Yeah, and just yet, by the grace of God, go we

Chris Jordan 1:09:06

Well, thank you once again for your time tonight. I greatly appreciate it. I know the audience loves these topics. So we will have you on again and again, Ella. Please do hold the line real quick while we close things out to our commercial break. So when we welcome Mary Joyce, while you are online, checking out all of the amazing work of our guests, Ella Bane and who's who in the cosmic Zoo. Make sure to stop on by curious realm that is where you can go that's where you can go and share your story. Curious realm.com forward slash story. If you have an experience with the divine if you have an experience with the paranormal or cryptids if you are

a targeted individual and would like to share your story, or pose your story or experience or even evidence, pictures, video, audio or To our experts, people like Ella, for shows like this, feel free to fill out our forum you can be anonymous if you like. We will bring up your case in your experience to our researchers and authors. So make sure to stay tuned after these messages folks, we will be bringing back our good friend, Mary Joyce to discuss anomalies on Mars on an article as well as the moon right after this. With the rise in attention to the health benefits of cannabis and cannabinoids including CBD, drew him science has become one of the premier providers of full spectrum CBD and CBD related products using a proprietary spideroak process. Through him science extracts maximum benefit from the whole plant buds, leaves, stems, seeds, even roots, every part of the plant is used and then reused to formulate a rich, complex profile of CBD, CBD derivatives and terpenes guaranteed to provide the relief and benefits you need daily. Visit true hem science.com to experience the best CBD oils, edibles and topicals on the market today and use code curious seven to save 7% off your entire purchase of \$50 or more and get to 25 milligram CBD cookies or brownies for free. That website again is true hem science.com and the code is curious seven. The curious realm Podcast is your source for the latest and greatest news and events in the world of the paranormal, esoteric and forbidden knowledge. And there's no better way to spark the conversation than with items from the curious realms store. Choose from fan favorites like hoodies, mouse pads, coffee mugs and more. Buy books and items from your favorite curious realm guests. Get your hands on the latest gear for paranormal investigations and experiments we discuss on the show open your web browser and stop on by the curious realm store at curious realm.com forward slash store to buy the latest curious realm where and out of this world gifts for yourself, your family or a mind you want to open that website again is curious well.com forward slash store? Have you considered starting a podcast? Looking for a way to make your business a voice of authority in an industry than podcast Cadet is the solution for you. Whether starting a podcast for yourself your brand, business school, church, or just plain fun podcast. Cadette is here to help you navigate the waters of the podcast industry specializing in one on one consultation and training with industry professionals in fields ranging from podcast technology and editing to distribution monetization and even social media strategy. Podcast Cadet tailors their services to the specific needs of you and your podcast. Do you already have a podcast and trying to find ways to engage and grow your audience. Sign up for your podcast Cadet audit today. And let us help you explore new and exciting ways to leverage your content and elevate your podcast brand a whole new level. From consultation and workshops to affordable podcast production and maintenance packages. Podcast Cadet is your one stop shop for everything podcast related on the internet. Visit podcast cadet.com today to sign up for your consultation or training and use code curious 20 to save 20% off your entire purchase. That website again is podcast cadet.com. Well, hello, everybody and welcome back. Our guest in this segment is the amazing Miss Mary Joyce. She is an investigator for the awesome website, Sky ships over cashiers.com. She has worked in news media, she has worked in investigations for years, and has come on previously talking about not only the stories of Cherokee literal people, but also very popular episodes about deep underground military bases, things like that. Today, we will actively be having her on to discuss her new book that has just come out spy in the sky. It is available on Amazon, you can hop out and grab that all over the place. Welcome back to the show. Mary Joyce, how have you been doing?

1:16:36

I'm doing fine. It's great to be back on the air with you.

 Chris Jordan 1:16:39

Well, I'm glad to have you back on the air. We went to have you on an episode pre recorded yesterday and had a little bit of a issue getting getting the images that you sent us. But the images from your new book are absolutely phenomenal. Here's an example of them. This is this is an image of UFOs getting on Mars, according to the to the breakdown of it here. Now. Let's let's get into real quick what it was that first brought you into researching these topics, Mary? Because your research is very in depth and travels us a far span of topics.

 1:17:25

We're not talking about the book, we're talking about how I gotten into all of this. Yes, exactly.

 Chris Jordan 1:17:29

Let's start there for those that may not have heard you on other shows. And then we will get into the new book spy in the sky.

 1:17:38

At one time, I lived on Cocoa Beach between Patrick Air Force Base and the Kennedy Space Center. And during that time, I saw a lot of activity in the sky, I got to meet people who worked at NASA, including one astronaut, and really began to learn a lot about UFOs. In fact, to the point where I was lecturing all over the state of Florida, just talking about the sightings over that state. So that kind of got me started. Then when I moved to North Carolina. I didn't know what I was walking into. But it's kind of a hotbed of very interesting topics. We have Bigfoot we have Cherokee little people, we have deep underground bases. It's It's just incredible. It just seems to go on and on and on. Also, giant skeletons have been found in this area. So it's opened up a whole lot of topics just moving to North Carolina.

 Chris Jordan 1:18:33

Absolutely. And even out there, you've got all kinds of wild lights in the mountains. All sorts of things. So when when you started researching the new book, Spy in the sky, what what was it that first sent you, I guess down that rabbit hole of anomalies on the moon anomalies on Earth anomalies on the surface of Mars.

 1:19:01

There is a wonderful tool that anybody can use. It's called Google Earth, especially the pro version, Google Earth Pro. And you can scan everything and get satellite imagery on Mars, on the moon, all around this planet. And anything that I put in the book, I provide the coordinates so anybody can go find what I have put in the book. And I did this because there are so many people out there, they get such a kick out of creating phony images. So if people can go and

find them for themselves, then you know somebody hasn't been playing visual tricks on you. And by the way this this book is packed with imagery. There's photos on all but three pages of the book. And almost all of those photos are in color.

 Chris Jordan 1:19:52

And the photos once again that you have provided us are absolutely Fantastic, highly detailed imagery that you have been able to provide for us here, let's, let's start getting into some of the anomalies that have been that you have been able to find on Mars. And specifically, this image that we have of the possible UFO skidding,

 1:20:23

okay, I end the book, I have three images of UFO is two of them crashing like this one, and one of them is actually parked on the planet. That one I'll start with, and it's a circular one. With Google Earth Pro, you can measure things. So it's a, let's see, it's at least three and a half miles in diameter. Oh, wow, it has a raised of center like some of the UFOs that have been caught on cameras here on Earth. And since you know, the sun hits Mars also. And there's a shadow. So you can tell it's something parked above the surface of the planet. So that's one of the images, the one that you have on the screen is is one, that's a skid, and that particular UFO is over, I think over 400 feet in diameter, and that skidmark, you'll see a yellow line, a top skinny photo, that is a measuring device. And that's over 4400 feet long. So we're talking a major skid. And then there's another one that shows a small aircraft also crash landing on Mars. And, you know, they end up to the point where they just smash into the, the soil of Mars, and they come to us to a screeching halt.

 Chris Jordan 1:21:44

And once again, these are things that anybody can go with Google Earth and find themselves,

 1:21:52

right. The coordinates are in the book, so you can go and find them. There have been cases where I have found stuff and posted it on our websites, Guy ships over cashiers.com. And sometimes within a day, they will disappear. So if anybody finds something really, really interesting, usually using Google Earth, there is a key on your keyboard where you can print the screen, save it, because sometimes if we discover stuff that the famous they don't want us to know about, they will quickly be blurred.

 Chris Jordan 1:22:24

Oh, yeah, absolutely. I mean, I am one of those folks that I will go take screenshots of things. So that there is a date attached to it digitally, all kinds of stuff, because yeah. And that's honestly, a lot of the reason why my Facebook group exists, the way it does, is so that you can

go and literally just search a topic and find out news articles. Because those things rifle off of search engine so fast. Now.

1:22:56

One of the things that regarding Mars in particular, I think it's important for people to realize that there is evidence that there is active human activity on Mars right now, kind of and so in the book I include, to what I would call habitats which would be enclosed living quarters, so that you can live in a hostile environment. I found one I got I think Well, anyhow, was quite a number of years ago. And I found it in the northern hemisphere of Mars. And it was 700 feet in length, which is pretty good size. Five years later, I was scanning. I call it cruising with with Googleearth, I was cruising the southern hemisphere, that Southern polar region, I found a second habitat. This one was similar in construction. But this one was truly 10 times bigger than the first one. So I suspect it was built later. And it's measured out at 7000 feet in length. That that's one kind of evidence that we are active on the planet now. And one of the reasons that I think this is very valid is the man who was the head of Israeli space security for nearly 30 years, hymen, a sheath I believe is how his name is pronounced. And in December of 2020. He went public with some very interesting statements in the Jerusalem Post, which is a highly regarded newspaper. And let me just quote two lines from the statement that he posted in the Jerusalem Post. One of them is there is an agreement between the US government and the aliens. That was one another one. There's an underground base in the depths of Mars, where their representatives are located and also our American astronauts. Another piece of evidence that I found when scrolling with Google Earth was I found 27 entrances and you may have a picture of that I think I've sent you 127 entrances going into Mars, they were all in a line spread out over 16 miles. They're all cut out the same way. So they look like hangar entrances or warehouse entrances. At first, you might think you're just seeing the same one over and over again. But the dimensions will vary anywhere from in round figures. 400 feet to 1000 feet in width. And the details around the the door, so to speak, will vary from one to the other. And I found that when by simply doing things a little bit differently, normally when we go to anybody, when you go to Earth, or you go to Mars or the Moon, you scroll from right to left or left to right. And I turned the coordinates around and started scanning from north to south. That's when I discovered this line of 27 entrances into Mars. And they are not ancient, they look like contemporary, active entrances. If I hadn't done that, I wouldn't have realized that there were so many in a line. I had previously discovered some, but never with this extended view of them.

Chris Jordan 1:26:17

There there has been a large community of people coming out over the last many years Corey Goode being one of them, claiming of course, the Secret Space Force, which has existed long and decades before the active Space Force that we have now. I mean, even even to think I laughed whenever people were like, Oh, look at this new thing. I was like, No, like the x 37 bees flying over our head and 2012 and landed after a two year unmanned successful mission. We have had secret things in the skies above us. For decades, at least as long as we've been in the air. That's correct. They're even here in Texas, there were the airship sightings of the late 1800s, things like that. So that was that was far before Kitty Hawk. Or, or, I mean, there were balloons, things like that. But nothing is massive as as my long ships in the sky. And

 1:27:24

I get amused there. I believe that still continues. There is a conference that goes on in Washington DC area every year. And it's about dealing with Mars as if everything they're talking about is in the future. As far as I'm concerned, everything they're talking about has already happened. And it's just why there's so much deception with what's going on, is a puzzlement to me, and I'm sure to you too, but it is a reality.

 Chris Jordan 1:27:54

Well, and you know, granted, there are reasons for deep secrets within military things like that. And absolutely one of the things that we have held throughout this entire recent I would actively say post movement of disclosure. Because the movement happened long ago, Stanton Freeman, all those good folks who fought for a good 20 years for the disclosure movement, what we are seeing right now is what appears at least to me to be a fully planned dissemination of information. Much like After Roswell, things like that, where technology took a huge leap to from microwaves being the size of a building to hey, here's one that can fit in your kitchen folks to what we have now and the only way that the technology will be monetized or be able to be brought out for the next generation of technology to come out is to be foot forward and say where it's come from.

 1:29:10

You're absolutely right you're on you're on target

 Chris Jordan 1:29:13

and even now to see China going back to the moon they have actively just discovered a new crystal on the moon that may be may be key for fusion energy. There are numerous anomalies on the moon numerous anomalous things regarding the moon even even the fact that seismographs on the moon recorded a rain like a bell

 1:29:41

or Gong has happened at least twice. Absolutely

 Chris Jordan 1:29:45

add to it because the first time they made the anomaly then it happened again. And you know for all those out there and my my great grandmother God rest her soul Mary was one One of the many that would swear up and down. We never went there. With that, nope, nope, that was Hollywood that way, which never happened her whole life. Like even when it happened, I was like, nope, not real. However, like, we have laser mirrors on the moon, we have seismographs. On the moon, we have scientific instrumentation that's there. I have jokingly said for numerous numerous years married that, oh, no, we went to the moon, we were just heavily invited not to come back.

1:30:40

Some confirmation of that in the book, I was able to go back and get a copy of the radio interview that Donna Hare gave to WL Wol radio in Washington, DC, way back in 1995. And she worked for the Space Center, or worked for NASA. And she had some kind of secret clearance. She went public, again in 1995, and talked about how NASA was deliberately airbrushing out images of things that were found on the moon. And so that interview is kind of interesting. And in the book to make it easier for people I've highlighted things that I think are really worth noting.

Chris Jordan 1:31:29

Oh, absolutely. I mean, NASA has, they have been airbrushing photos, since they have been taking photos in space.

1:31:40

Because of that, because of that is very, very hard, even using Google Earth today to find anything on the especially the far side of the moon that hasn't been tampered with, in some way or another. And I was absolutely flabbergasted that when I was doing my scrolling of the moon, that I actually found a pyramid that is on the side of the moon that's facing earth. After all the cover ups, I couldn't believe that that was still available for anybody to look at. And it's no small thing, it looks like a White Pyramid. And each side is like 328 feet. Wow. in size. So that's another image that I have. It's one of the few black and white images but it is a photographic image of that image or that pyramid? Well in

Chris Jordan 1:32:32

there there are numerous structures on the moon, there's there's the the large smokestack that apparently puffed out air as as our modules went past it on the moon. There, there are what look what appeared to be glass tubes on the moon. All kinds of strange anomalies. And, you know, let's, let's start getting into a couple of these other images that you sent, specifically the images from an article. For

1:33:14

clarification, those two things at the top are two of those entrances into Mars that I was talking about. Yes. And that's just one of 20. That's just two of 27. And in the book, they're a little bit sharper than that because I had to do copying and pasting to get these images. But if you look at the edge of each of those, the border around the entrances, you will see that the little notches are a little bit different with each one. Yep. So they're not identical. But they at first glance, they seem to be one of the rest of those entrances are in Antarctica. Well,

 Chris Jordan 1:33:55

in you know, of course, there was the long held belief by Admiral Byrd not even not even belief account that he flew into Antarctica that there was a hole that was wider, big enough for him to easily fly his plane through. And there's another place

 1:34:19

I have, you know, had that on our website. And it reads like a fairy tale. Yeah, but it's coming from a man who's not very likely to concoct a story like this. So you have to you know, hold your breath and think Hey, he may be telling the Absolute Truth.

 Chris Jordan 1:34:35

Well, in a you know, even even to that note, there is quite literally let me let me see if I can find it real quick. But there is an actual no fly zone over Antarctica. There there is a part of Antarctica that is a radio free no fly zone like it's a it's a dark area. That's correct. And you It's It's pretty wild even even whenever you start looking at other anomalies that have been found in the Antarctic region.

 1:35:14

If you can go back to those two entrances, and I can give you some more information on that because a great cover up story goes with that one.

 Chris Jordan 1:35:23

Well, let's, let's talk about that real quick. Here we go.

 1:35:31

Okay, the larger entrance, which is on the right, is 300 feet across at its max and 100 feet high at the peak. So any plane that we have could fly in there very easily Yes, out. I suspect this is still a very active entrance. Because no sooner had I put that on the sky ships over cashiers website. I think it may have been within a day, it was like somebody poured black India ink all over it, so you no longer could see anything. But that wasn't the end of it. Right after that, I was still able to find the two entrances. And I have a photo where you can see where they are in position to each other. They're not right next door, like they appear to be here. And even though they black them out, there's still words that say Hollow Earth entrance one, hollow earth entrance two. But that didn't last last very long, either that went totally black. And ultimately, they turn that whole area into a White Ice feel like there was nothing like that ever existence. So when you look at the series of photos, you begin to see how cover ups can be done. And you know, we no longer can see what's really there.

C

Chris Jordan 1:36:51

Yeah, and there have been numerous cases of images disappearing from Google Earth, things being there one day and then not being there. The next. It's and this this other image that you have on this page down at the bottom is pretty phenomenal, and shows some incredible structure.

U

1:37:15

It's almost a year ago that we began to discover ancient cities emerging from the melting ice and Antarctica. And you can see the wall like structures here. I mean, it's very, very clear. But we posted a number of our I have put a number of these in the book. And not only you do, do you see the rectangular box shapes of walls. But then you can see also how the off say the city has evolved, let's say along a river or something because the flow of the boxes is in a very organic fashion, like we see when, you know we see cities developing today. Now what makes this incredible. And again, we only only found these a year ago. Most scientists say that that continents been covered in ice for 34 million years. So these are just now appearing from the ice, which would make them incredibly old if they if that continents been covered for 34 million years. To put this in perspective, the Great Pyramid is less than 5000 years old. Compare 5000 to 34 million. There's just no comparison. So this has got to be the oldest remnant on the planet.

C

Chris Jordan 1:38:32

Well, yeah, I mean, if all scheduled sciences they have it is according to calendar date. Absolutely. And you know that that brings into question a whole number of things that we speak about regularly on the show, Mary, which is the almost the almost religion of science and rigid unwillingness to change things like that. Even whenever you're talking about the land, the quote unquote, land bridge to America that brought people over to North America. That's funny, because Native American stories go back further than that. Correct. They, you know, and even even whenever you look at things, which, yes, I will admit, the Perry Reese map has never been fully confirmed. However, it shows a pretty accurate accounting of the actual continent of Antarctica and the coastline. Right? And that was, at least to all knowledge at that point, not an explored area of the world. It wasn't like, you know, hey, here's, here's a map by America, Vespucci that Columbus is gonna use, you know, that wasn't the case with an article At the time, yet still, there is a perfectly accurate representation of the coastline, sands ice. There, there are numerous accounts from other ancient cultures about another continent, not even Atlantis, but about there being another continent. So, to see structure like this, and granted, this is yes, a zoomed in image however, the the angular markings of this specifically the filter being used to process this image for that to pop out would mean that it would have to be raised. Right. I mean, even even if you're using Photoshop or something like that, like that is a, quote, find edge function where it's like, okay, fine, the raise parts and highlight them.

U

1:40:57

What I did with this particular photo, is that I just turned up the contrast Yeah. You know, you could see it instantly, you can still see it when I when I don't do that. But I wanted people to be able to easily see what I was talking to Oh, well. And

 Chris Jordan 1:41:13

that's just it. And that's why I'm decoding for folks, a couple of different processes that you could use to get the image like that. And like you said, All you did was altered the contrast, man, those those hard lines pop out immediately. And that that's how you can tell that like, it's not altered. It is it is an actual physical thing that's there. So these are some incredible images that you have provided, especially those of the Mars entrance there. Now, Now, granted, there was the whole kerfuffle recently, and that's probably fresh in a lot of people's minds, especially our listeners. That about the quote, entrance that was found on Mars, it actually just ended up being a geologic feature. However, this is quite different.

 1:42:09

Yes, this? Absolutely, especially when you find 27 of them.

 Chris Jordan 1:42:13

Yeah, yeah. And the fact that, once again, it's not a shadow being cast or anything like that. These are hard lines. That is that is lack of light on the inside of something. So pretty, pretty incredible. What other evidence Have you found on Mars?

 1:42:40

Let me thank you. I'm gonna go blank on your here. The habitats I think are significant. The I found one of my explorations, just before I finished the book, was to explore areas of Mars where scientists believe that there's water or ice beneath the surface. So I started searching in that area. So the very last, it's not at the end of the book. But at the very last thing on Mars, I found a deliberate cover up in an area where the water is found. And in one of the photos it, it shows like train tracks that are parallel to each other. And then there's two areas where it's like somebody took a stiff brush, dipped it in kind of a reddish kind of paint, and just did swatch marks over two places in this region where water is supposed to be. And it's just not natural. I mean, it's, it's almost like a stupid cover up, it looks so blatant. And so I have pictures of both of those sites where it's been blurred up. And the reason I started looking for that information is there is an organization that's known as swim as like you swim in the water. It stands for subsurface subsurface water ice mapping on Mars. So I started with their research, and then ended up finding this by just doing searches over and over and over again, you don't instantly find these things. I mean, the things that are in this book, I have really collected over the years, and still it's brand new.

 Chris Jordan 1:44:20

Yeah. And I mean, just to show you how new it is, folks, I mean, December 20, God December 16 2021. I've got the article from New Scientist right now large deposits of water found on Mars below the surface at the equator. We had found surface frost, we had found ice, mainly made

of carbon dioxide, things like that. We had seen frost form that was a big big moment was when they when they saw frost form on the actual rover overnight, that that showed the fact that there was at least a van aeration in

1:45:00

the atmosphere that I didn't know. That's really interesting. Yeah, yeah,

Chris Jordan 1:45:04

that was that was one of the first big like, there is water on Mars because you're not going to get frost forming on something without it without without evaporation in the air. So it was like, Oh, this is a big moment, like, we just saw it form on the actual rollover. And then it was shortly after that, that we started seeing things where water was found deposited at the polls. And then once again, and this is all within the last few years, the announcements of water, water, water, and then once again, large deposits like they're talking about, like underground lake size deposits like tappable, aquifer deposits,

1:45:49

I may not have made my logic logical for you. But what the reason I started exploring that area is because humankind needs water to exist. So I figure if there's going to be evidence of us being there, it's going to be where water is most most likely to be found. So my assumption on the pictures that were covered up or brushed out with red paint, is that that is a facility of some kind that's been inhabited by most likely us are aliens one of the other. Yeah, well, and

Chris Jordan 1:46:20

even the fact that in 2020 have got the nasa.gov site up right now, from the inside and articles talking about water discovery on the moon, inside and out. That is that is molecules of h<sub>2</sub>o embedded in perhaps sticking to the surface of grains and lunar dust. Like we have, we have actually now actively found water on the moon as well. Right. So and even the announcement in the last week and a half that we have found the first exoplanet that is half rock half water. So the the existence of water is like you just said it is key for life as we know it. Right. Like there's other life things like that. But But life as we know, it requires water.

1:47:18

I found two sites around one of the polar regions right now, I can't remember which one it was. But one was ancient. And one is contemporary. They're about 80 miles apart. So both in the past and in the present. They had been built near a water source.

Chris Jordan 1:47:37

.....

Oh, absolutely. Yeah. And and you know, even identifying potential landing sites, things like that, for the for the Mars Rovers. Those, those were things that they were looking for, right? They're looking for places on Mars with signs of past water. Like those, those were absolutely key landing spots for them to go and explore. Because of and even now, they just made an announcement here in the last day or so I remember posting the article of new new biomaterial, new actual evidence of life having been on Mars. So what do you think the odds are that we have a sustained colony out? Even if it's the fact that we are out resource gathering? You know, what do you think the odds are that we have a sustained presence on either the Moon or Mars? Mary?

1:48:43

I believe we do.

Chris Jordan 1:48:44

Wow. Wow. And have you

1:48:48

actually I believe that it's more likely to be on Mars than on the moon. But as far as Mars is concerned, I've done enough researching on that I am. I would do a heavy bet that yeah, we're there. Wow.

Chris Jordan 1:49:05

And, you know, once again, there have been quite a few people that have come out from the quote like super soldier programs, things like that, where they have actually said that they have been part of Mars mission that they that they have actively been part of the occupying force. That is the

1:49:24

sad thing about that is the only thing we have, if we cover stories like that, is life say one is one person's account. And that isn't enough, you know, to really totally be convincing, but it also is enough for us not to easily dismiss it. Sure, sure.

Chris Jordan 1:49:44

Absolutely. Especially if you can vet that individual if you can bet there past, things like that there. There have been a couple of folks that have have withstood a good bit of vetting that have come forward with that and it Yeah, I always find the topic interesting. I find nothing. My wife is one of those married that's like, I don't think that I don't think that people have it in them to cooperate to that extent. She is a disbeliever. In that way she she doesn't believe that

it's possible for people to put forth something like that and just keep it secret. I am of the camp of you know, there were people building singular parts all day long at a GE facility in Alabama that were like, well, this is what I do. And they had no idea that they were building detonators for atomic bombs. And that's all that they did was pump that one part out all day long, every day for a decade. So yeah, like there, there are definitely compartmentalised programs, there are definitely, as we've said before, with with the deep underground military bases, a a swath of evidence for such things as well as budgets and technology. And the reason I bring that up is because one of the others pictures that you sent, and we have had Merrill Fankhauser on musician who has done quite a bit of work out in the Catalina area of California talking about anomalies that are underneath the water there. And you sent a fantastic picture of what appears to be an underground runaway under under the water near Baja, California. And if you zoom in on this picture, folks, you can see the absolutely amazing structure that is down there, the full curves. Everything that once again look strikingly like like a runway for an airport. But regardless of that, definitely do not look like a natural feature.

1:52:09

No. And I got the picture of the Spokane airport runways, which I have which you have two, which you can compare and you can pin almost instantly see that similarity? Oh, absolutely.

Chris Jordan 1:52:24

Absolutely. And you know, once again, the there were plans way, way back in the 60s, folks, for underground military bases, underwater military bases. There exist numerous like literal books, full of artists, rendering illustrations, things like that there is a full on underwater base, right over off the coast of Florida.

1:52:52

Now, my my take on this, and I have quite a number of underground, I mean, under the sea imagery that's included in this book, my working theory right now that these are ancient remnants. I think this is a civilization that once was above water. And I do not think that these are necessarily space related. At the same time, I know that there's a lot of UFO activity along that whole California coast, especially around Catalina, which both things can be true and not

Chris Jordan 1:53:27

well, and they don't have to be mutually exclusive to exist, either. Yeah, I mean, you know, we have to we remind the audience regularly on this show, Mary that the term UFO does not mean extra terrestrial, it just means on identified and that it flies through the air. And that it is that that's literally the definition. So could it be the fact that the civilization that was there is still there, their technology would be pretty advanced to have survived the previous melting of ice caps to make the ocean that we have that now covers them, you know? So to imagine the fact that they may have craft or something like that would not be unimaginable, if they were able to build that and even survive it possibly.

1:54:22

Yeah. But the reason I really, really think that this airport is ancient is because you don't need a landing strip if you're going to land in water. Yeah. So that to me says this is ancient. And I have found what I think are ancient remnants of maybe even the old continent of Mu or Pan or Lemuria. That's three names for the same place. But I have found evidence of photographic evidence from Alaska, all the way down to Baja. And so that whole coastline there's just all sorts of remnants and we continue to find them. So it's quite an active place to search.

Chris Jordan 1:55:05

Oh, absolutely. And once again, there have been some amazing anomalies that have popped up Alaska wise and article wise, things like that. And there have been more than one situation and disclosure of things being found off California, specifically in the Baja and Catalina regions. So

1:55:30

now it's a little harder to find things off the Atlantic. And here I will give you a personal story. Back in the days when I went live in Cocoa Beach, I was at the pier with a friend and we were having drinks at the bar at or the, you know, at the pier, and got into a conversation with a young couple who were still rather excited because they had been diving off of Vero Beach. And they had discovered a point of the pyramid coming up from the sandy bottom of the Atlantic Ocean. Well, that got my curiosity, it was the first time I had ever heard of that possibility. And eventually, at a much later time, I started using Google Earth and searching and searching and searching, and finally found two pyramids south of Paradise Island, which is, you know, one of the popular islands that people go to. And I have pictures in the book of the two pyramids that I that I discovered that way. Again, this is also a cover up story, because shortly after I posted that on the website, which is where things seem to happen first. A new photographic strip had been put in there, and it was specifically over where these were, so you could no longer see them. So it's just real interesting.

Chris Jordan 1:56:54

Well, in a, you know, there there have been numerous sites like that discovered. I mean, parts of the Library of Alexandria had been rediscovered in such a way. There's even the gentleman, right, you have been trying to track him down to have him on the show. But there is a gentleman right over in Louisiana that spent years and years out on oil rigs, things like that. And claims to have actual sonar evidence of an entire, almost sunken temple, just off the coast of Texas and Louisiana.

1:57:34

Wow. Yeah. To get him on. Yeah. Make him bring his photos to Okay.

 Chris Jordan 1:57:39

Oh, absolutely. Yeah, his I'm, I'm trying to remember the show that I saw him on. And I was like, Whoa, where did it gives? It was like a news story. Wow. Did I saw that somebody shared with me. And it was like, wow, that's, that's crazy. That's interesting. Because it was an he apparently tells very few people about it. Takes very few people out there. But yeah, here we go. Where is it? But yeah, we have we have had all kinds of things like that pop up around America.

 1:58:23

You might find this interesting. The Atlantic bottom is very sandy compared to the Pacific. And whenever big storms come in, the treasure hunters will go out there looking for things that have been exposed because of the turbulent, let's say a hurricane. And one of those explorers was one who worked with Mel Fisher, with the Tosha find in off a Key West. And he would fly in his small plane over the coast of East Coast of the United States after the storms. And he had seen the pyramid that would sometimes show up when the sands were you know, like, let's say flushed away. But then the sands will cover them back up again. So it's like they appear and disappear. So if you want to be a treasure hunter in Florida, you need to get out there after the next hurricane, which is headed there right now.

 Chris Jordan 1:59:15

Yeah, yeah, absolutely. And there's the article that my buddy had sent me. Amateur archaeologists may have found an ancient city off the coast of St. Bernard. And there's the gentleman right there. Cyril serious Yeah. And I mean, like he's he's got some pretty interesting sonar soundings and things like that showing right angles and all kinds of stuff. So the, the question, I guess, Mary is, what do we do with these things? These anomalies that we've found the ones that you have found on Mars, the ones that you have found in the Antarctic and on them What are what do we do now that we are armed with this information?

 2:00:08

First of all that the more you know, the better off you are, because then you can find out if you're being hoodwinked or winked or not. That's one thing. The more people know, the more pressure can be put on, let's say our government to provide more information because our government only provides information when they're cornered. You know, and and have to say something. So, you know, this year, they've been showing us radar images of tic tac UFOs through radar images from jet aircraft. Yeah. Deal. That is not that is so that is such a baby step in Revelations.

 Chris Jordan 2:00:50

Well, and once again, I am utterly happy for the discussion that it is opened on the floor of Congress, because apparently a lot of people who are quote, read on on the topic and in charge of such committees and the financing for search committees, were like, Hey, how come we

haven't heard about this? If this is going on? How come it isn't in our briefings? And even if you wait, when you those are moments that I actively go and I screen capture the whole thing? And, and save the like, I've got the entire five hour long? Wow, I I go and record the whole thing. Like just in case they disappear.

2:01:36

But from my experience, it's a smart thing to do. Yeah, yeah.

Chris Jordan 2:01:41

Even even the the panel on the origin of the COVID virus. Like most people didn't know that that panel happened. There. Were there were five people from the intelligence community testifying to that to five members of Congress in an empty pressroom. Hmm, remarkable. And most people do not know that these hearings happen. This one with the UFO UAPs happened to hit quite a bit of national news. They made quite a bit of noise about it, which you have to ask yourself about. While it was great that quite a few of the questions that were posed were literally called for MUFON data and questions. At the same token, there were two or three times one of which they actively asked. What about objects going into the water? What about these accounts of UFOs becoming quote USOC and becoming becoming underwater submerged objects to wit, they literally responded, we'll discuss that after this in our closed door session. So when it when it came to things coming in and out of the water, because those were there with the Nimitz encounters as well. Right, you know, and with the stories told by the sailors and all that kind of stuff, and hey, those those stories even date back to like, Cuba, and, and Christopher Columbus, like Christopher Columbus even recorded lights going in and out of the water.

2:03:20

Now, you know, that I believe in UFOs. But I want to tell you a little bit about Christopher Columbus, I was on San Salvador Island, which is the island that they believe Columbus first landed on, I was there at the time, they in October, at the same time that he landed there. And I had studied his log before I made that trip. He talked about little lights flickering up in the evening. And he described them in such and such a way. I was around a campfire at that point, and the natives are the people who live on the island. To this day, we'll keep throwing logs on the fire to keep the mosquitoes away. And every time they do these little lights, you know, flare up into the sky. I do not find that conclusive that he saw UFOs because I saw that phenomena for myself at the same time a year. And I think that's what he saw

Chris Jordan 2:04:14

I could see that definitely being something that and you know, the the fact that we have explored once again the option of basis underwater. The fact that we have quite an extensive research base underwater off the coast of Florida I don't find it strange that there are things underwater. It would make perfect sense to me. Especially the the every single culture around the world just saying that there was a flood at the same time. So yeah, we definitely had some

stuff that is landed on underwater, but some of these things are so intricate. It really does beg the question, you know, are we using the same technology that we use to burrow underground and build tunnels and infrastructure to do the same thing underwater? So I think the possibility is there whether or not it's a fact. I don't know. What is a fact is the strange anomalies. And this is the image of this is just one of them. Once again, there.

 2:05:36

I should add something to this. The longest airport in the world is I think, a little over three miles. This one's at least 80. I think it's 89 miles long.

 Chris Jordan 2:05:46

Wow. Wow. That is incredible. That's huge. That that's regardless, just construction on a massive scale period. Right? Which ones?

 2:06:00

You know, everything I've seen along the coast of the Pacific seems to indicate that there may at one time had been not only a very unique civilization there, but it may have been a civilization of very large beings.

 Chris Jordan 2:06:15

Yeah. Well, and you know, specifically there in the, the West, you in Tahoe Basin, Utah, Western California, all that the Native Americans actually actively talk about the large redheaded giants, right, you know, the the pie Utes talked about them regularly. So it's, it's interesting how these anomalies that have popped up. On Mars, the Moon here on Earth, may very well be remnants of ancient civilization. And we have to, as as individuals, be willing to push the timeline of knowledge and push the tie and also destroy our assumptions of what ancient people were capable of. We we recently had Steven Meyers on and love having Steven Meyers on, mainly because he approaches the construction of the pyramids with a with a very logical point of view, you know, yes. And some extreme technology going on. But does it have to be alien based or aliens? No. Like, they were really, really good with water? Have you considered the fact that they just flooded the plane and dropped the bricks into place instead of taking them off a raft and pushing them across the dirt? So yeah, things like that. If you start considering the engineering techniques that ancient civilizations and cultures had frequently, we haven't even caught up, we still haven't fully decoded the the chemical mixture of Roman concrete.

 2:08:13

The very ancient civilizations seem to have been more advanced than we are getting close to catching up.

 Chris Jordan 2:08:21

Yeah, yeah, precisely. I mean, when you go back and look at things like Machu Picchu, stuff like that, just what it takes to construct something like that in such a place. Phenomenal. Does it have to be alien in origin? No. But it's the technology alien in the same way that these are truly UFOs unidentified flying objects? Yes. It's alien, because we don't know it. You're right. And by true definition and usage of the word, yes, it's alien. It is something foreign to us. That probably even when posed with it, we're going to be stupefied by Gotcha. That's I mean, just to think about the fact that anybody that was building at the time that their structure off the coast of the Baja Peninsula would have been made. Even if that is a geoglyph. Even if that is something like a NASCAR line that has been taken over by water, AB nine miles at nine miles and able to make straight lines for 89 miles. That's that's some incredible technology. You know, even even we have deviations in our equipment that don't make perfect lines over 89 miles. Yeah, I want to thank you for coming on. As always, thank

 2:10:00

Before before you disappear, well, if the last pictures that I sent you,

 Chris Jordan 2:10:04

okay? Which ones are those?

 2:10:10

That UFOs around the sun?

 Chris Jordan 2:10:12

Oh, yeah, that's right. I forgot about that one, the Phoenix.

 2:10:17

That's really a big deal. There was a man who contacted me in 2013, from the Netherlands. And he was taking NASA photos of objects around the sun. And then he would clear up the debris and the interference and zoom way in and began to get really detailed information. And he was in touch with me from 2013 to 2015. And you can see by these two images, how detailed and how metallic, these things are, now, they're giant, everything that we have found around the sun that I posted in the book is bigger than Jupiter, which is our biggest planet. And both of these things that I sent to you are bigger than Jupiter. We the the man, his name is Matt Patmos, he and I name this supplying Phoenix hotel because the more you zoom in on it, the more it looks like it's a flying ship or condo type thing, cruising the neighborhood of our son. And there was another one that will also look like a wingbeat creature. And we call that one the flying Phoenix. This one right here, that you're now looking at was like a giant extension rod

going way, way, way out in space from the sun. And yet, when you zero in, you had the detail like you would have if you zeroed in on a saxophone. It's metallic. And it's interesting, you know, just incredible detail. And so we have a number of those things. And I include the original NASA photos, by the way, anybody can access NASA photos by looking at Soho. And so hosts is a satellite that constantly monitors monitors the sun, and I think sends a picture out like every 15 minutes. And sometimes when you look at that you get lucky and you find something.

 Chris Jordan 2:12:19

Well, there have been numerous anomalies spotted around the sun over the last few years. There were there was, of course, the image that went viral of the suppose a sphere like taking plasma from the sun. Yeah,

 2:12:35

it looks like a round ball with this umbilical cord to the sun. And it's there. I no longer can remember it seems like it was some 70 Something days, maybe it was it was attached to the sun for some time.

 Chris Jordan 2:12:47

Yeah, yeah, it was. It was like umbilically attached. It was it was really weird. And the other image that you sent along with that was one from a NASA mission from the Gemini five missions. Now, explain this one. Because once again,

 2:13:07

I can't explain it. The as there were two astronauts on board that space mission, Gemini five, which goes back to the 60s. And that's they got a photo of this, I cannot explain it. I call it an electrified donut. But you know, it's just playing on, there was another one that the same Gemini crew took a photo of, and again, I have, you know, a picture of that in the book. And it looks like the wiring or the filament inside of an old time incandescent light bulb. Why would something like that be floating in free space? I don't know. But again, this book, is is a photo book. And it's a great book for people who really want to know stuff, but don't have the time, or the inclination to want to wade through a lot of words. And like I said earlier, there's there are photos on every page, except for three. So photos. And it's photographic evidence of secrets and cover ups on Mars, the Moon, here on Earth, out in deep space and around the sun. And I think people will find it very interesting.

 Chris Jordan 2:14:22

Absolutely. I once again, since I found out about the book, because I've got your whole collection, as I do with most of my guests. I ordered this for my collection as well. I appreciate that. I cannot wait to get it. I absolutely love it whenever guests have photos in their book. And

like you said the fact that the whole book is photos like what we have been looking at this whole time. So

 2:14:49

and I do the same thing on the on the website, which is scholarships over cash. Oh, absolutely. Yeah. And there's photos with I think there's photos just about every story that we do. Yeah, and the best stories are in the section called Global links, because those are the ones where you have the photos from, you know, deep space.

 Chris Jordan 2:15:10

Yeah. Yeah. And I actively follow scholarship, over cashiers. I love the updates that you send out with stuff. You are always putting out some fantastic. Here's a, here's one of those, talking about

 2:15:26

the larvae. Yes, we just did. We just posted this one. And it's created quite a conversation on our Facebook page. You know, these are tubes. What are these tubes? And you know, some people who knows, I'll go back to that. Go back. Right there. We'll back up again, I want you to see the inside of that lipo up again. All right there. Oh, see that? What does that look like to you? And why would something like that be floating out in space?

 Chris Jordan 2:15:56

Yeah. That is interesting. Because the first thing that I thought of was was plasmic discharge, Aurora, you know, something along those lines, but even then you would need particle for it to come off of and even if it's the fact of Is it is it what's in the center that the outside is reacting to? You know, much like that would be so absolutely phenomenal stuff. And once again, you you always put out some great material Mary, I love it whenever you come on.

 2:16:39

You're very kind of very gracious, and I appreciate it. And just don't forget that you are part of the greater team that's trying to create true disclosure, because it's not going to happen from the top down.

 Chris Jordan 2:16:53

No, no it isn't it it will happen on a grassroots level. It's the only way it will happen and once again it not to discredit anybody not to take any thunder away from people like Lou Elizondo stuff like that who are out there and doing things but there's still a lot that's under wraps. There's still a lot that Read on to people are not willing or wanting to talk about. And that that

to me would speak more military than Extra Terrestrial. It would speak to me as more of black technology and and technology that is still being tested and Red Team Blue Team. Which it just seems to be the case with a lot of this. The important thing is that the discussion has started that since when was that December 17th 2017. When Lou Lou Elizondo first brought forth a tip and and the Nimitz videos to CNN. Since then, the conversation has changed the conversation around bars on the topic has changed. The conversation around dinner tables on the topic has changed, mainly because the topics now a topic. Gotcha. It didn't used to be a topic, you know, it was one of those that got brushed off and dismissed pretty quick. Now a lot of people are willing to have a conversation. And when when pupils come out things like that, typically it's it's in the greater 80% of people that believe there is something else. Yes. So, so keep up the good work absolutely you to once again, let everybody know, before we let you go where they can go to follow you socially where they can go to subscribe to Sky chips over cashews. YouTube, all that kind of good stuff, Mary.

2:19:05

If you go, I don't know if you can go back to the homepage. Oh, I'm there. No, hit home. You're sorry. You're correct. Okay, right there under editor's corner. There's contact information that you can get from there. There's also there's a lot of things in there. If you want to find out about the books, there's quick summaries of each one of them. The area that's getting the most attention right now is the one that says global links. Many of the stories that ended up being in the book originally started in that section of the website. And we just keep doing research and that's that's a hot one to go to usually. Oh, absolutely. That's how you can contact us if scholarships over cashers.com. We do have a Facebook page. I tend to do shorter things because people on Facebook have a very short attention span and but you can type in the same thing scholarships over cashiers.com and do it on the Facebook page and you'll get to the, you know that particular place.

Chris Jordan 2:20:09

Fantastic. Well, once again, Mary, thank you so much for your time in this pre record. I love talking with you. I love the evidence that you bring forth all the time. Keep sending pictures. Now, please, please, please. I know we had a bit of an issue. But man, the pictures that you used to send and that we would have conversations about were absolutely fantastic. So I look forward to many, many more having you on again and again in the future.

2:20:37

You're very kind you have a good dress today. Absolutely.

Chris Jordan 2:20:42

Take care and we are going to close out the show with the audience real quick while you're online, checking out all of the amazing work of Mary Joyce over at Sky ships over cashiers.com Folks, make sure to stop on by curious Rome curious Rome is where you can find all of the episodes that is where you can find our knowledge vault full of amazing scientific documents

studies, declassified government programs and PDFs. That's also where you can go and click our share your story link. Whenever you click that it will take you to a page where you can share your evidence, pictures, videos, audio, where you can share your account of the paranormal, Bigfoot. If you're a targeted individual, you can leave it anonymous if you like. You can use your name if you like. But this is material that we will be presenting to our experts on shows about topics about the same so if you would like your story heard if you would like your experience examined by professionals in the field, feel free to stop on by [curious realm.com](http://curiousrealm.com) forward slash story. Until next time, everybody take care of yourself. Take care of each other. And remember, stay curious. We'll talk to you soon. Bye bye. Thank you for tuning into this episode of The Curious realm. Stay tuned for more guests forbidden topics hidden hidden truths. Download the official curious realm app and view the knowledge vault on our website [curious realm.com](http://curiousrealm.com) Follow us on social media by searching curious realm. Curious realm is available on your favorite podcast services as well as YouTube. Roku, Amazon Fire an Apple TV through the APR TV app available on all App Market. Curious realm is a proud member of the HC universal network family of podcasts. For more great content or to become a sponsor of curious realm or other podcasts.
