crystals, stones, great, technology, fact, literally, minerals, frequency, construction, years, interesting, quartz, find, built, curious, big, pyramid, jared, world, podcast

## SPEAKERS

Chris Jordan

---

Chris Jordan 00:17

Coming from the city of the weird exploring topics from the esoteric and unexplored, two dimensions are known. Shining a light of truth on the darkest corners of our reality. Welcome to the curious realm Well, hello everybody and welcome welcome to episode 54 tonight of the curious round. Thank you so much for everybody that's been tuning in this last year since our rebrand we are now just over two weeks into the rebrand Well, a year and two weeks rather, we just had our epic seven and a half hour long 52nd Episode A couple weeks ago last week we had our good friend Mike Tiburon, as well as Dr. Kathleen ball talking about Knights Templar in Brazil. That was incredible. Tonight, our guest after the break will be our good friend, Jared. Jared Murphy will be joining us we will be talking about terra preta, as well as other loss technologies of ancient civilizations that were far far beyond where we're at now. I mean, when you get to the point that you can actively genetically engineer the soil under your feet. That's the kind of stuff that we'll be getting into tonight with Jared Murphy. Some insane stuff going on down below down Billy's way with him. Some great research coming up. Maybe we'll get into that. Our guest in the first segment here in just a minute will be Dr. Kimberly McGeorge, our good friend, as well as sponsor and the author of The Secret to everything series available on Amazon, make sure to stop on by pick up your copy of that on Amazon, as well as the curious roam store. Along with Mike, thank you, everybody, I want to I want to give you, I guess a hearty word of warning. As we go into the new year, there are a lot of things going on in our world. There are a lot of things going on politically. There are a lot of things going on in the world of disclosure, and it's sometimes hard to bust that fractal apart and to clear the cobweb without getting it all over you. What we have to learn to do is filter information, we have to learn to take what we need and leave the rest. That doesn't mean dismiss the rest. It just means set it aside. You know, don't overload yourself. It's hard in this day and age and after after our first the reason I'm doing this is because after our first year episode, I had probably about eight or nine targeted individuals reach out to me asking how they could contact Dr. John Hall. And it's hard. It's hard when you're a targeted individual. It's hard when you're somebody who's going through something that not everybody can equate to not everybody can sympathize or even empathize with sometimes and that's sad. But there are people who are there for you remember that this holiday season, folks. There's always somebody who's there for you. We will be getting into that we'll be getting into crystal energies. Tonight. One of my favorite topics in the whole wide world. My whole shelf behind me over my other shoulder, not

this shelf. But the one over there is full of crystals, everything else. We'll be getting into that and so much more with our good friend, Dr. Kimberly McGeorge right after we take care of the news of the week. The news of the week is of course brought to you by our Facebook group. Stop on by joining the conversation folks. There's 1000 and over people they're having conversations, posting articles about science tech, what's going on in the world all kinds of things. Here's a great update of Egyptian things and Rosa crew Shia from the Rosicrucian museum from Kathleen ball. Our guests last week at of cnn.com Elon Musk booted off stage at a Chappelle Show. And okay let's The Wow, there we go. There's 3000 books that are popular dot info. Three 363,600 books that have been added to the banned list recently, a matter of archaeologists.org scientists had successfully recreated a dinosaur from chicken DNA. Out of interesting engineering, MIT engineers develop paper thin solar cells that can power any surface. This is This is remarkable technology. out of futurism.com artists are furious about the AI that draws stylized portraits of people that is that is the new AI that's out there folks that everybody's taking their pictures with. Apparently, a lot of the filters are copies of styles of artists that are still alive. And out of I love the universe, scientists have created a Star Trek like plane that uses ion thrusters and no fuel. That is just some of the articles that are out there right now. Stop on by and join our conversation there on Facebook folks, our guest in this segment. Our good friend, Dr. Kimberly McGeorge, she is the head of the secret to everything secret everything.com is the website. She is your number one source for alternative health, Healing frequencies and consciousness exercises. Welcome back to the show, Dr. Kimberly, how are you doing?

06:30

I am wonderful. It's such a pleasure to be with you. I always enjoy you and your audience so much.

Chris Jordan 06:35

Always great having you on I always you were one of the guests that whenever I finish having them on my show, my fingertips are always tingling, which to me is it's a sign of extreme energy, whenever that happens to me. So that's the that's the feeling that I look for whenever I play instruments that I like things like that. So it's also one of the feelings that I look for whenever I am choosing rocks and minerals I'm holding in my hand right now a double point, that's a quartz that sits here on my desk on the day, as well as a large chunk, probably about a an eighth, almost a half or quarter pound chunk of meteorite that sits here on my desk as well. Those are those are a couple of my meditation friends that I keep around. Those that know me, those that traveled the road with me know that I am rarely without a crystal in my pocket as a grounding mechanism. And if I know you long enough, sometimes I may just meet you and bring you a crystal like, wow, I'm just moved to some people I shake their hand and it's like I can I can almost feel what they need. You know? And yeah, I'll go like find them a Polish stone of that quality. You know, be it the fact that they need grounding, or something like that. So I'll go out and find the hematite. I love

08:15

it or or the piece sensitive though your frequency sensitive. So every stone has a frequency and and the person has a frequency and you must be able to feel like what they're missing, you

know, or what they need.

 Chris Jordan 08:30

I definitely am. I guess what people would I get? I guess really? I don't know if I'm truly an empath, necessarily, but I always whenever I walk in the room, I can tell the person that I need to talk to. I can I can tell the person that needs help, like almost immediately. So I guess that is an empathic quality. I wouldn't go as far as to say is like I am a trained and honed empath. Like some empaths I know.

 09:09

Yeah, but yeah, I know. Yeah, I know what you mean. But you're also I think musicians are empathic, like, who is a musician and I'm a musician in my own way, not like you. But you know, I've played piano since childhood and I write music, but I think there's like a channeling involved in music. I think there is a a resonance and an in topic, sense of music that kind of all goes together.

 Chris Jordan 09:36

Oh, most definitely. Most definitely. And that is that is one of the things I as an audio engineer, worked with a lot of jam bands. And that's a lot of the reason why I liked working with them. Was there was this empathic play between the musicians, they could tell immediately where the next person was going. There were there was unspoken language that happened between them. And it was it was really remarkable to see that frequency on stage and to feel that transmitting through the audience. And when and now, we're going to get into what what a lot of people might call air quote here. Woowoo topics tonight, folks. But I'm here to tell you and I say that, oddly enough doctor because a friend of my wife's who I have yet to meet, she's in one of the white one of the moms groups that she goes to things like that. They were all out with the kids things like that. And they were playing and one of them was like, Well, you know, a, my friend was talking all this woowoo stuff about her crystals the other day and and the frequencies from her crystals. And my wife told me this, and she's like, I kind of hesitated to tell you because I thought you might like take it personally. And I just laughed. I was like, Okay, I've got your answer here. And I give people like that a five fold answer about one mineral, quartz. Quartz. Ask them if they are holding a cell phone, or if they have one in their hand. Feel free, feel free to remind them that every time that phone rings, it's using a piece of quartz in the piezo electric speaker, every time that they speak into it, it's vibrating a piece of quartz in the piezo electric microphone. Ah, yeah, yeah, they're actively looking at little bitty tiny microscopic slivers of quartz in that liquid crystal display. Yeah, that they're touching. And then they're using lithium, another mineral and crystal to power it all. So it's like, it's all right there in your hands as far as the technology that you use every day. Quartz like it's, it's in just about everything that we use electronically. It's it's a major part of the chips and things like that, that they actively make out of silicon. That kind of stuff. So to say woowoo is a little a little strange to me. Really, it's it's becoming much more solid science. The fact that yeah, we can we can store data on quartz

12:41

Yeah, really, really incredible. And a lot of people don't know this. So when they reverse engineered, you know, the spaceships that crap, you know, that have crashed UFOs, you know, I don't like call me up those but whatever we'll call them. Every single engine that they've ever found on an actual space ship is driven by court technology corpora. And I actually believe that in all time, all space, that you cannot find a spaceship no matter how advanced feature path, whatever, whatever dimension you want to say here or there anywhere that is not driven by card plasma technology course is so foundational for anything super powerful, whether it's a computer, or whether it's just kind of like quantum type of woowoo technology like you're talking about. Yeah,

Chris Jordan 13:35

precisely, no. Let's start getting into a little bit of the vibrational qualities of crystals and minerals. And what they can do not just with mere presence, but with contact and with regular use.

13:55

Yeah, the first thing I want to talk about just really briefly, is when we run scans on people with if anyone wants to listen, I think the first time I was on the show, I've run a couple of scans on you, but I know I ran one. The very first I think it was the very first show, right? I ran a scan on you. Yes, you know, when we scan people what we find is 100% Including me everyday people are starving for minerals, like starving for minerals. I mean, of course major ones zinc, zinc, copper balance, magnesium, you know, the major ones, even lithium Of course, I mean we're so our nervous systems are so dangly Of course, lithium, but really all minerals were just so I mean, we're electrical beings and we're being bombarded by you know, all this EMF and all this like, you know, dirty electricity and a lot of technology that we can't see, but we can certainly feel and because we're electrical, we just get so fried out and everybody's nervous systems are screaming on and everybody's immune systems are turned off. And if there was one thing I wouldn't even have to psychically gas or scan. I'm telling you, I could go up to any random person or animal and be like, you need minerals. And I'd be right. It's really bad. And I mean, plant minerals. I mean, absorbable you know, minerals. I don't mean like rock mineral.

Chris Jordan 15:19

Yeah, like I did through my skin that you did on me at that point, which was confirmed by my doctor later, after, after my massive gout attack last time. When I had blood work done, they were like, oh, yeah, by the way, you're also vitamin D deficient. And that was one of the many things that that was one of the many things that popped up in my scan with you.

15:48

Well, I didn't

 Chris Jordan 15:49

was that I was I was vitamin D deficient. That was that was one of the many things along with the fact that my my body craves CBD. My body actively craved being around crystals, minerals, things like that. It was it was really interesting, because all of that was blind. None of that was we had had no next to no previous conversation other than setting up our interview. Before your first interview, Dr. Kim, just so that everybody's like, Oh, you know, how long did you know her before you before you had her on? After you had the scan done? Literally, the scan was done about an hour before we went live. She was like, oh, yeah, if you want, I'll do a scan of you send me a picture. And I was like, Oh, that'd be great to show up on screen. So this was not like something that you had days to analyze. This was not like we had had days of conversation or that we know each other the way that we know each other now. This was I had talked to your PR person. And I had set up an interview. And we had exchanged a couple emails about what the process for coming on the show was going to be right that was it. You you basically did almost as cold a read on me as you could do and nailed it. If I remember, Billy Joe Kane was in the room. Cuz he was the upcoming guest after you. And his jaw was dropping, because he knows me knows me. And he knows that like, I am a daily CBD user. He knows that like, I carry crystals around in my pocket. He knows all of these intimate things about me other than the vitamin D deficiency that that your scan showed up with so it's really interesting. Have you ever done scans with people before and post crystal use or even Deering crystal use?

 18:00

Oh, yeah, I have tons and tons of crystal panels. So a lot of people will ask me to scan them and see what crystals are compatible, what they're calling for. And people call for crystals for different things, you know, they call for them, you know, emotionally they call for them for spike, you know, activate psychic gifts. One of the things that all the pork family so great at is sports and Ruby and a couple of the other ones are record keeper crystals. So a lot of people want to know which crystal they used to get, you know, to help them activate that past life memory where if you want to get really, really well, because a lot of these crystals were thought to be from Atlantis and the Mary and other Aesop's and a lot of ancient civilizations. And just like you talked about the beginning of the show with a computer. The ability of crystals to hold massive amounts of memory is amazing. And so we can get a hold of these recordkeeper crystals. And then I teach people how to activate them, and it can really help you. Remember, start remembering your past lives and remembering who you are, you know, all time all fake, because I mean, I don't know what your audience plays. But I obviously believe we're eternal beings. And we don't start out religion teaches us We start out as eternal beings in this life and then going forward, that actually doesn't make any mental logical sense. If you think about it. I teach that once you come out of the all of course, you're an eternal being idea and point of view. And, you know, you've been around millions of years and probably going to be around millions and millions more unless you choose to go back to the Gaul, which some people would call that.

 Chris Jordan 19:39

Yeah, it's interesting because it's not like you could actively be created necessarily, especially out of nothing. That's not how physics works. So you and you've definitely got to maintain afterward because at the least your energy changes but it doesn't dissipate or disappear. So

yeah, it's, it's interesting once you start getting down to the quantum level of things, and once you start looking at even once again, I've got the article up right now from CNN BUSINESS, about new, new Superman crystals that can store data for billions of years. And they're literally holding up something about the size of a quarter that has the Holy Bible on it. And these things can quite literally, literally are so stable that they could store up to one of these could store up to 360 terabytes the equivalent of 22,000, basic iPhones. And they can, and they can store that data for the equivalent of 13 billion years.

 20:50

Yeah, that's absolutely. That's absolutely crazy. Beneath the now beneath it now, do you are you aware of this though? So, you know, binary and chinery data was really, really about crystal. So I don't know, if a lot of people know is crystals are trying area. So they actually have sentient consciousness. They're not binary, they're not two dimensional, they're actually 345678 dimensional. So a lot of people don't know that they actually have a sentient consciousness. So you're one quartz crystal is going to have a totally different consciousness, and interactive, you know, ability than your other crystal like it's absolutely super amazing when you really get into the deep study of crystals. And what makes the Trenary so powerful is the ability as you said, to not just store frequency, but also the output signal. So I can release frequency, which is why crystals are good for active things like healing, they're not just, you know, good for storing they're also good for releasing and having an effect on matter and non matter.

 Chris Jordan 22:05

Oh, absolutely. And I'm holding in my hand right now. AlAmiri in quartz crystal, it's probably about 10 inches long, probably around four inches around something like that. Pretty big. But when she's talking about a record keeper, just so you know, folks, right here, you can see these little striations in the light that radiate all the way down the crystal. This one has them literally on every single facet of the crystal, they're just all over the place. A very dear person to me, gave this to me many years ago. And it's it's never ever left my side. It's always on my desk, always near me. But that is a that is an example of what a record keeper is. And basically the concept is that whenever something was stored, it caused a new striation.

 23:03

Yes, exactly. And just in case anybody has one, one of the simplest ways to activate it and has to be activated and released is to hold that in your hand and you can literally run your thumbnail or any nail down eat straighten, and you'll hit that it will actually open that like a file and you'll be really really surprised especially if you're very conscious about it. And you request to have like a lucid dream or you're open to any visions or any new insight you get in the next couple days. It's absolutely amazing.

 Chris Jordan 23:37

Well and you know, let's talk for a second because I think it's a good opportunity to talk about the idea of programming. A crystal quartz is especially fantastic for that. A lot of minerals you

the idea of programming. A crystal quartz is especially fantastic for that. A lot of minerals you can't necessarily do that with that kind of stuff but but quartz and quartz based crystals specifically you can program with intent. Now basically that that requires you taking your crystal a little bit of clear water running clear water over it thinking of clearing intentions, rubbing it in a salt bath of grounding salt if you like what have you but let's talk about programming and crystal and how you can get the most out of your crystal and friends.

 24:29

One of my favorite ways to program is to and you have to be careful quartz crystals are safe but not all crystals are safe to do this with but you can make crystal elixirs which is why if you've seen these really really expensive like water bottles which they have crystals and then like they're like \$100 and like vessel the socks and then you put water in and but what's really cool is you can program your water you know with intent so your B because the crystals have this you know output signal ability and you can program You can program for more money in your bank account, or you can program for, you know, attracting somebody into your life or selling your house or getting a new job or you can be activating your psychic ability. This just has to be like 3d stuff. And so it's super cool. I like you know, to do crystal elixirs, because then you're, you're drinking that that's like bathing it, like he talked about bathing, and it's the same thing. You know, that's washing over you that's, that's reinforcing them sending a signal out so multiverse you know, this is my intent is you're basically using what the matrix computers that run this reality, which are also run by crystals. You know, you're you're doing the same thing, you're kind of gaming the game. So when you really understand what crystals are, you really understand how they work, you can actually game the game, which means you become the creator of your life and the crystals are just a tool to do that. You don't need the crystals to do that you can do that yourself. But definitely just like any other tool crystals are an amazing tool to do that.

 Chris Jordan 26:07

The Crystal elixir brings about a tissue one of the first things that I have it's it's one of those that it's one of the first things that I ever learned about crystals, or big at least history, occult history, things like that was Amethyst, and the fact that it was used as an amulet by ancient Romans, and put in their wine to help to help ward off drunkenness.

 26:40

Ah,

 Chris Jordan 26:42

that was that was one of the that was one of the first I guess a cult uses of a crystal or mineral that I ever heard of. And I forget which which Compendium I read it from it may have just been amulets and talismans. A book that I used to check out for my public library regularly when I was in like Junior High in high school. But it was it was really interesting just to see that and see the fact that because it had the color of wine. The Romans just figured that it it absorbed what what wine did. And and would would increase sobriety. Even if carried with you, you know,

would would cause clear thinking, which is really interesting, because if you look at it in modern day concept, Crystal and mineral use for those of you out there that are targeted individuals or who are sensitive to RF, things like that. Amethyst is your friend.

 27:53

Yeah, and Salman says is your friend, you guys are gonna love this one. That is my number one. Well attracted money increase recommendation is amethyst. So yeah, I recommend when we Fung Shui a house, I recommend you carry that in your car, your wallet or your purse. Because it does attract wealth and does attract money too. It's a double federal good news for that.

 Chris Jordan 28:22

Interesting because I mean, I've got a little bit of Amethyst right here, just a small piece. I'll be showing you all these so that you can kind of identify them. But it'll it'll basically look just like quartz. Except it will be purple because of the iron content. And it's really interesting how all of these permutations of quartz have different properties to them.

 28:58

Yes, yes. They definitely have different properties to them. And they're I mean, like Rose Quartz Rose Quartz. Most people know is a you know, if you've been wounded by love, or you had a heartbreak or you've had a death, the pet has passed your grandma. Everyone I think know of course, you know, Rose Quartz, even though it's in the courts feeling has a very specific effect on the heart but opening the heart and healing the heart. And again, attracting love that is what we would recommend if you're looking for you know, a relationship or you're looking to be more open in a relationship, you know, so it's interesting how these frequencies even within the same family like you said, you know, are so different.

 Chris Jordan 29:53

Oh, absolutely. And now when it comes to programming, your crystals especially cool Words Rose Quartz, things like that. What is what is this? Is there any special process that you have people follow whenever they program one?

 30:11

I mean, again, you can program and into an Alexa or I don't I don't have any special to me it's intense. And again, these crystals are sentient. So you need to think to me, you need to think of a crystal as a person. So how would you interact with a person, you're not going to, hopefully, you're not gonna yell at a person. And hopefully, you're not going to say, go pick up my dry cleaning, you know, they're going to be like, yeah, right. Now, you're not going to do that to Crystal, you're not going to demand a crystal to deliver you something, you're going to recognize that kind of as a sentient interactive being, because it is. And so you're going to what

I recommend is people sit with it, people sit with it, they close their eyes, they hold it. If they can do it for 30 seconds, it doesn't have to be a certain amount of time, or you can do it for 10 minutes, you can do it for an hour. But you you feel into that crystal, and then I encourage respect, you know, will you work with me? Instead of demanding instead of forcing an intention? Will you work with me? You know, let's say Rose Quartz to attract a new partner. And it's interesting when you start asking questions of a sentient beings what you hear. And don't think that what you hear is you because it's probably not. Because all communication prior to the game is mind to mind. And most communication opera dimensions is mind to mind. So just because you hear something in your voice, or just because you're like, No, this crystal is not talking to me, I'm crazy. You can't think like that, when you have to start opening yourself up to how, you know sentient beings, like trees, and flowers and animals and crystals communicate. And so opening a dialogue is amazing. And I had crystals like me. I mean, in the middle of the night, Oh,

 Chris Jordan 31:58

I I think my wife was probably one of the first people to ever see me. In a shop, like rocks, a mineral, I love going to rocks and mineral shops, I'm a rock hound. But just going up to a bowl of quartz points. And love it and finding the one that talks to me finding a finding the one that like moves me that when I hold that I can feel it. And it's the same thing with just about any mineral things like that, like I'll hold 20 of them, but one of them will give me the feels, so to speak,

 32:42

that you said that and I encourage anyone that goes in a even a huge shot with tons of rocks, like you'll be surprised, like, you keep being drawn to one and you're just touching it or it feels unfortunately, I was in Sedona and I had to buy certain things I'd even have the budget for like half the stuff I bought. But like when I held it in my hand like it was like almost attached. To me it was like, it became like I say at once. Once a relationship it was like waiting. And so definitely don't just count like your eye going back to something or you can't put something down or, or like you said it is it's a relationship and US cement your relationship with your crystal star. And if if a crystal picks you out, it's a high honor and deep. I mean, upper dimensional beings. I mean, we think you know, we're the Bob but we're not. It's these silent, you know, sentient beings that really have all the mystery and all the magic. You know, you're looking for magic, you want to be an alchemist. You know, there's a hole which I just put a course and there's a whole field called stone medicine. I mean, the power of these crystals to move energy, depression, anxiety, heal serious diseases is mind boggling. Can anyone do it? Yes, but they can't. Because again, it's understanding the nature of these beings because that's what they are. They're sentient living beings. And once you understand that, and actually once you understand that about your whole world about trees and animals and plants and everything, I mean, everything starts to change. I mean, the mountains by your house or the mountains you see on vacation, again, sentient new information, you know, go and sit. You wonder why the monks go into caves and the mountain. It's not by accident. It's not they understand this living, interactive, sentient record. That's all around us that we don't take advantage of.

 Chris Jordan 34:44

Oh, most definitely. There is a connection that that we have lost the the easiest way I can that I can akin it is when I was a kid and and seeing my grandfather. And granted I'm 47 years old. My grandfather who has IV dad was in like seventh grade, something like that, I think he was 55. When he died, he was he was not an older elderly man at all. Maybe even 54. But to see somebody who grew up farming, somebody who grew up hunting and trapping, to see this person who had a literal connection to the earth around them, articles with him like growing, you know, 1415 inch daikon radishes, you know, a two foot long, like pound radishes, things like that. Just insane gardening skills and hunting skills and fishing. Somebody who truly had a connection to the world around him and into grounding, you know, because of that, because of that being outside because of that being surrounded by nature. Having a true grounding with that, and I think we tend to miss a lot of that in today's society, not just the idea of grounding yourself with crystals, things like that. But being a grounded person to begin with. The idea of I've been trying to get my son into the idea of walking around without shoes, especially in the house, like stay a while get comfy. Let your feet touch the ground.

 36:41

And do that with my scan people, I would say eight out of 10 scans. The first thing I'll say when I look at your arm, because that's how I started here is I'll say you're coming out of your body you need to get in your body. So we always think to be like victorious in this round, we need to have out of body experiences and this and this and this and that. But it still needs to happen in the body. You need to hold your body we see so much possession and so much, you know entry with entities and and attachments and things because people don't hold their body. And what a great parent, oh my gosh, my girls like you're not allowed, where's my house grounding and then they fell down my parents it gets horrible. I keep students in the car. I don't even keep shoes in my house. Because I mean, in all go outside, and I'll go outside when it's cold. And I sat wood on it for three hours, you know, like the survivalist do because you know, your kid gets hot and you can get to it. But there's just something about having that it doesn't matter what you're connected to gravel or dirt or snow or grass. But there's something about that connection, especially for people like me, and maybe people like you, we just need a little extra grounding, you know, and too cheap. That is brilliant. What a great parent. Like, seriously, I can't believe you said that. Brilliant.

 Chris Jordan 38:05

Thank you, thank you it truly is, I think it's something that we have lost connection with we have we have lost the feeling of vibrating and being one with the world around us. It's great. The ability to slow down and appreciate that that's truly what it is. It's one of the only times It's one reason why I keep a crystal in my pocket is because yeah, it's like a worry stone when I start to get anxious or something, I can hold it. And it's something familiar and it's something calming and it's something that it's an energy that I know and I am familiar with, despite anything going on around me. It's a way for me to ground myself amidst it all.

 39:06

I think that's right, you know, and it doesn't have to be even though Yeah, grounding stones are great, you know, hematite, Black Tourmaline I mean, there's all these stones that they say as I say whatever it's grounding for you because we're all different. So in your grounding so may

say whatever, it's grounding for you because we're all different. So in your grounding so may not be a typical air quote, you know, grounding stone, it could be something it could be an emerald

 Chris Jordan 39:29

terminated Himalayan Smoky Quartz. I carry with me

 39:35

crowded but interesting thing. Smoky Quartz is very earthy and grounding but so that's kind of intuitive while at the same time also be very expansive but it's crowding

 Chris Jordan 39:51

Yeah, it's a it's a litter my my son found it not too long ago it did. It had gone missing and He had not been able to find it for about a week. And he dug it up and found it and brought it to me was like, hey, look, I found this. And I was like, Hey, my friend. All right. And I think that was the first time that he realized that, like, I called my crystals and my minerals, my friends.

 40:18

Oh, man, that's so interesting,

 Chris Jordan 40:21

especially the ones that I keep here in the studio. The ones the ones like my business that I have here in camera right now. It just, it is familiar to me. And it's one of the pieces out of many that called to me amongst a shop where it was like, Hey, you look at me. And like you said, and and undeniable poll and reasoning to buy it. The rest of it came along later. But it was that being able to be present in that small moment that allowed me to be called to it to begin with, and the conversations that just that rock in my collection alone have started in my life, when people see it, and they're like, Wow, this is because it's entrancing when you when you start looking at the actual geometry of it, and the the tiny little squares that that it grows in naturally. It's wild, it's almost almost like you know, stylized ancient Grecian, little, little square square swirls. Just really wild, interesting stuff. And I've always been fascinated with geology. So minerals, to me, especially especially crystals have always had a special place in my heart. But over the last year or so it's really become minerals that I have been collecting and meditating with and using, like, I've got a chunk of Carnelian here in front of the camera right now. Big chunk of Texas Carnelian. Wow, and probably about palm size. That is, that's the size I prefer, is something that I've got it, The scary thing is I have a big hand. palm size may be different for you than for me, folks, for me, POM sizes, you know, just under racquet ball size, if something is completely round, you know, but something that I can hold in my whole hand is what I prefer when we're meditating or are using them in a healing way. Carnelian is one of

those that I kind of use when I am getting ready for my studio time. When I'm getting ready to create and write and and makes music that's that's normally when my Carnelian comes off the shelf.

43:01

Interesting, because I would recommend that in general for created for opening up positive life choices for competence for power. You know, so that's interesting, because it seems like that's kind of how you use it too.

Chris Jordan 43:18

Oh, absolutely. Absolutely. In a you know, a lot of these things, folks, if you if you literally googled the mineral itself, or and Google like, you know, Carnelian meaning things like that, you'll at least get a vague idea. It's kind of like horoscopes or astrology where yeah, there's some science to it. Great, but there's also a lot of tradition to it as well. And a lot of a lot of these qualities of stones go back to ancient uses traditional uses by cultures all over the world.

43:59

Yeah, absolutely. One of the things too, if you don't want to be so active with it, if you're like, I don't have time to sit around, meditating like you guys, like you crazy people.

Chris Jordan 44:13

Oh, I don't I don't have like 30 minute meditation sessions every day like I used to. But it's something that like, I've got my guard up right now. He's been my friend this last week. And it's, it's literally having it near me. Having it right there were like, almost like a worry stone or a fidget widget. You know, like when I'm when I'm working at my desk and programming things like that, like I'll, I'll have it just kind of rolling around in my hand.

44:44

When you can also know is you can take a picture or you can print a picture on your computer, or you can even write your name on a piece of paper and you can just plop that down on the person or on you or you can even draw if you want to do healing, you can even draw an outline of a human figure write their name, and you can plop that on somebody's throat or somebody's stomach or somebody's hat. Like so I love so medicine because it can be show radionic CLI frequency passive, but it's really super active.

Chris Jordan 45:21

How often do you do stone work with patients of yours and people that you are working with? In, in the psychic world? Because you you offer many different classes, many different courses

over at secret to everything. Right? How much does stones come into play with that? Is it more with the healing sessions, or, or explain it

45:50

really, if someone hires me to do a full scan and touches my heart, I often will do, I don't advertise this, but almost every scan comes with healing. I don't advertise that, but I usually work on them. I mean, if I see things in your field that I can remove, or your timeline or in your energy field, I'm not going to like leave it there, if it's easy for me to, you know, take care of so often. You know, a scan isn't just a scan, it's also a healing, energy healing. If I really touched by you, or of course, you know, people, I love my kids, my dog, you know, the people in my life, or particular clients touches me, I will go ahead and print their picture out. And I will play a stone grid, a crystal grid, which is a little more complicated topic, but I'll do a grid for them. And sometimes it's not just for healing, sometimes it's for attracting a job attracting a partner Attracting Wealth, activating psychic abilities. Again, it's not just for healing, but it just depends if I'm really touched by a client, like I'm working with a woman right now, who's had mine for 18 years, and she has a family and I'm just really touched by her. So I'm, she's not even going to know it. But I'm going to pick so to do a healing grid for her, which is great for me, because, again, I'm not saying I can forget it, but I can kind of forget it, I can set up a healing grid in my office, and it's working, it's working 24/7 while I'm sleeping while I'm doing other things, and I really suggest that you guys start playing around with that you will be shocked.

Chris Jordan 47:25

No, no. When you say healing grid, explain to the audience what you what you mean, and how they would go about assembling a healing grid in their own space.

47:38

Right. And it's intuitive. So there's no right and wrong way to do a healing grid people can teach you. But again, it's intuitive. So it depends what I'm going to do, I'm poor. So if I'm going to do a healing grid, you know, for certain ailments, for like lines, let's say I'm going to pick calm stones, and I'm going to pick balancing so they don't want to over you don't want to over kind of whelmed someone on the line. So I would, you know, get a body while I have, you know, anatomic clay correct body charts, you know, but you can just draw something if you don't, and I will write that person's name, or I will take a little picture of that person on this chart. And then I will play certain stones on their head and certain stones on their stomach. And of course, I scan them, so I know what their particular weaknesses are. And you know, some stones are antiviral and antibacterial. So I'll pick those stones and if they're prone to migraines, I'll pick those stones. And if I know that there's a lot of trauma, you know, I'll work in things like you know, the rose quartz, and Selenite if I know their crown chakra needs to open and there's no there any grounding hematite, you know, for their spine, and it'll just be intuitive. And I'll place these on this body chart. And you can do this with a home too, because a lot of people's homes can also be healed with some medicine and that's a whole nother subject but you can do the same thing you put a map of your home or you put a map of your land. And it's it's really cool. There's a lot to it, but you know, so that's what I'll do I'll set up but it's not just for health if somebody wanted well then I would use again, you know, I would use Moonstone I would use

amethyst, I would use Lapis, I would use a fence serene green adventuring, I would use Jade I would use different things that I would set up a different type of grid to draw wealth into their life. But But what's so cool is again, these aren't just like passive frequencies even working each one of these stones is its own sentient being that is also interacting with this game with frequency so much more living moving things like having your own little Healing Team and and that's what I'd like to get across today is that stones and crystals and minerals are not hospice, they're sentient beings, you want a doctor and nurse team of the highest caliber that's multi dimensional and magical. It's no crystal, like, bring these beans into your life and start working with them. You don't even have to believe me to live with it, like you're not gonna hurt anything. There's nothing that you can damage, there's no wrong way to do that. But you will be shocked if your listeners really did this, you will get stories they will, their minds will be blown. I'm talking,

 Chris Jordan 50:29

you know, I hear just from the people that I give them to those, those are the stories that matter to me. People that I travel with stuff like that, that are that are literally like my family that I've come to and been like, hey, so I've noticed that you've kind of been like this lately. Here's, here's a little something to kick around with in your pocket and think about, you know, and hear to hear them come back and say like, Wow, man, this thing, this thing really helps. Like I can, I can feel it. It's really incredible. And it to me, it's just about opening a mind into somebody's opening somebody's reality to something larger and greater. That's right there around them every day. And believe me, you do not need like a terminated piece, a double terminated piece of quartz with like 80% clarity or anything like that. You can go out and find a piece of gnarled quartz from the road. Yep, and that will have the same qualities.

 51:45

Yeah, and we haven't really talked about this totally but each crystal is a portal which is why they use crystals for crystal balls as describing you know, things like scrying mirrors and things like that because they have this portal multi dimensional connection. So you know, some people don't know like obsidian has been used which people think is weird because it's dark, but city has been used for years and years as scrying mirrors and I think it's so cool as Dark Crystal.

 Chris Jordan 52:26

John Dee's famous scrying mirror was was polished obsidian the ancient Mayans their priests use Polish did city and many many people have used polished obsidian for scrying mirrors

 52:43

I love it and as a matter of fact I recommend that so you guys know if you do have a crystal ball or you do have a scribe near I recommend you keep that covered at night because it's so super for and hopefully that you don't want to be conscious when you're working with that and not just allowing you know anything that well

 Chris Jordan 53:05

no no it's interesting that you say that I mentioned that regularly on the show that you know we are now in the world of scrying mirrors everywhere Dr. Kim everywhere cut your TV off got a big one. I literally do not have a television in my bedroom for that reason.

 53:25

be too good for you and I won't because it's a primary it's it's I mean it's a black mirror if you watch TV so black mirror I sleep

 Chris Jordan 53:36

with my sleep with my phone screen down yeah and you know a lot can be said that you know of well I also won't have a while I would probably have the push widget for a for a Ouija board I don't think I'd have a full on Ouija Board

 54:01

have the placard the little dad

 Chris Jordan 54:02

I go for the placard all day long but I don't think that I would go for a Ouija board in and of itself because that is the tool of divination that's there that is that is the intent is the board itself and you know yeah your your obsidian sphere I've got one back here behind me and yeah, you you should keep it covered. I keep mine covered. Whenever not in use things like that. Not so much with my crystal ball with my quartz ball or with my Selenite sphere or anything like that. But with my with my obsidian ball hit Yeah. It's it's covered.

 54:52

How you discover

 Chris Jordan 54:54

Oh, absolutely. Absolutely not, not my other crystal balls isn't managed There's not my other ones but that one. Yeah, because because it is it is a two way. It's it's a two way. And it's different than a two way conversation. Like a, like a normal quartz crystal.

 55:20

55:15

Yeah, exactly. Yeah, absolutely. And definitely.

Chris Jordan 55:25

And you know that, like you said, there, there can be some caveats. There's, there's not a whole lot. It's not like holding a quartz crystal or keeping one with you in or in your pocket is gonna even even though I'm here to tell you Smoky Quartz, if you love it, it's cool. It's beautiful. One of the reasons it turns smoky is because it was grown near a radioactive environment. Just so you know. That is that is what causes the smoking. I didn't know that. Quartz is normally it's grown closer to like a volcano or somewhere that there was like a seeping like carbon monoxide. Some kind of radiation like that like radon, you know, pretty close to fault lines, things like that is normally where you'll find Smoky Quartz. There's a big big vein of Smoky Quartz here in Texas because of our fault line. Nine but but it's not like carrying that in your pocket leeches radiation into you. It's not like putting that in water is going to leach the radiation out that it was grown near leached the radon out into your water doesn't work that way it is it is and that's what always cracks me up about Crystal Skull vodka.

56:47

Ah,

Chris Jordan 56:48

I don't know if you heard of Crystal Skull vodka. I love you, Dan Ackroyd ever really do and I was at the release of Crystal Skull vodka in Houston. I love you. But you cannot distill a liquid through diamonds. It doesn't work that way. Right? You can't distill water through quartz. And if you can't distill water through quartz you can't do it through diamond because that's a more tightly packed matrix than quartz. So you're triple distilled through diamonds sorry dude. No, maybe you ran it over some diamonds and like it passed over somebody's diamond bracelet on the way in but it's not triple distilled through diamonds. That's not how crystals work. Talk about tonics from crystals, you know. But it's interesting to me that this is all even if you go back to Kabbalah. If you go back to the high priests of Israel, they themselves had a had a placard that they were made out of gold that had 12 Different holy stones on it. Each one possessing a different quality that without that breastplate, you could not vibrationally directly contact God or touch the Ark of the Covenant.

58:21

Right, which is a whole nother interesting conversation.

Chris Jordan 58:27

Just to trace back some of the mineral use some of the crystallin use some of the use of precious and semi precious stones.

58:36

vibrational frequency was probably spiritually, you know, expand expansive as well as fiercely protective would be my guess, you know?

Chris Jordan 58:48

Yeah, most definitely. Most definitely. Well, no. How does somebody start making them say I guess start getting themselves ready to communicate with either crystals, minerals, what have you? How can how can they start making their way to recognizing that tiny pole from one of them whenever they see it in a shop or whenever they hold it, sitting next to a river?

59:17

You know, what I you know, and I think it's actually pre work for that. It's a couple of things. First of all, when we can people and I think I've told you this before, our soul requests. Most people told requests, which you hear this, four hours of silence today was the time. So any amount of silence you can give yourself is going to prepare you for communication of a higher vibrational connection, of course, just by, you know, unplugging your mind and sitting in silence, you know, without all the overstimulation and distraction that we have. And then the second thing that the soul requests, which I think I've also told you before, is a minimum, minimum and I'm scared to go further than this. We program the scans with 10 hours of nature a week and I live in the middle of woods and I want to say I get 10 hour, nature a week because we're talking about going into nature, hiking, walking, sitting, you know what I mean being in nature. And so those two things, I think, prepare you for almost everything that we would consider spiritual I think that's, that's preparation is listening, you begin to hear the whisper of the wind, you begin to hear the rustle of the small, small insects to begin to sense. The fourth and fifth dimensional creatures in the MSA kingdoms. And the kingdoms that you don't think exists that do, you begin to hear the language as a plant, you know, and tree, which the trees talk on the wind, you can know everything that's going on in the world by listening to the wind in the trees in your yard, because they talk to every other tree all over the world. And we just are talking, you know, the language of the trees. And so, you know, when you're running around, and you're going here, and you're going there and you go to Walmart, are you making Christmas cookies? You're not really preparing yourself to walk in a crystal shop and and feel that subtle call of a beam that's trying to get your attention, you know?

Chris Jordan 1:01:18

Oh, absolutely. Absolutely. That is that is more than a muddled frequency and way to live and sadly that man that's how I live 70% of the time. I'm trying to get to the point where I get back to 10 hours of nature a week or where I can even get back to baby steps of nature a week much less than 10 hours that I used to do because there was a point in life when I was assisting youth minister things like that where yeah, like I went out fishing, I went out hiking and you know all kinds of stuff rockhounding I spent plenty of time outside at one point in life and there was definitely a difference in my grounding in my day to day life.

 1:02:10

Yeah, we think we don't have time for it but it's amazing when you make time for that stuff how other things fall into place in your life. I just think prove when you you know make time for that kind of stuff.

 Chris Jordan 1:02:23

Oh most definitely. Let everybody know where they can go to catch up with you where they can go to find out more about crystals minerals where they can go to sign up for a session where they can go to get coaching alternative health and frequency healing from Dr. Kimberly McGeorge.

 1:02:43

Yeah secrets everything that Tom You know I have a YouTube channel I'm on social media and I have an Etsy stores, secrets everything so I'm pretty easy to find if you want to find me. Thank you.

 Chris Jordan 1:02:57

It literally is a very easy Google stock away folks. All you got to do is hop on Google and search Dr. Kimberly McGeorge and she will pop up as well as the secret to everything I want to thank you for your time tonight and always Dr. Kim

 1:03:15

Oh yeah. fun conversation

 Chris Jordan 1:03:17

I want to I want to a before we leave say Nathaniel Gillis take care of yourself man you're out in the hospital tonight. Rest easy brother. All right, the world needs you out there. But I want to thank you doctor one not only for being a sponsor of this show in our first year but much like our guest coming up Jared Murphy you were one of the many catalysts for our change. Well, it was it was having a frank conversation with you after our first after your first appearance on dudes and beer when you were like you know, I gotta say when Michelle first got a hold of me I was I was not about this show at all like I said no. And Michelle was like I know the name is off putting but go listen to it and go check out the guests and yeah, yeah, so that was that was a big part of of my you know, Peter over the hill of the roller coaster that has been the rebrand over the last year and I want to thank you for that little extra push up and over the hill it's one of those you hear it from a couple year thinking you think you think it then you hear it? And then you hear it again? And then you hear it from someone like you and you're like oh wow. And sure enough, as soon as I had rebranded and everything else you actively contacted as

soon as I can contacted people and said we've rebranded you contacted me and said how do I sponsor? So I want to thank you for your support in that. I want to thank you for your support over the last year it has really meant a lot to me and you are always welcome on this show with your wealth, wealth, wealth of knowledge about alternative healing.

 1:05:23

Well, I'm always here for you like I said, if you need me for anything, so and I look forward to working with you more in the future.

 Chris Jordan 1:05:30

Absolutely. Well, we are going to go ahead and head off to commercial break so thank you very much for coming on tonight. I greatly appreciate it. We will be in touch with you very soon with the link to the episode everything else.

 1:05:44

Thank you all you guys have a good evening.

 Chris Jordan 1:05:46

All right, you too while you were online checking out everything from Dr. Kimberly McGeorge at secret to everything.com Make sure to stop on by curious Rome. Curious Rome is our website that is where you can find all of our episodes. That's where you can find our story. Curious rome.com forward slash story that will take you directly to our experience or page Oh. Okay. That will take you to our experencer page which will actively work at some point I don't know why it didn't anyway, stuff on by check that out. Folks. That is where you can share your experience. That's where you can share your cryptid sighting your sighting of Bigfoot, your anything if you're a targeted individual step on by and share your story with us we will post it to our professionals. Coming up after this break we will be joined by Jared Murphy to discuss the world of lost technologies of our ancestors things like terra preta, other technologies coming up right after this folks. With the rise in attention to the health benefits of cannabis and cannabinoids, including CBD, drew him science has become one of the premier providers of full spectrum CBD and CBD related products using a proprietary spideroak process. Through him science extracts maximum benefit from the whole plant buds, leaves, stems, seeds, even roots, every part of the plant is used and then reused to formulate a rich, complex profile of CBD, CBD derivatives and terpenes guaranteed to provide the relief and benefits you need daily. Visit true hem science.com to experience the best CBD oils, edibles and topicals on the market today and use code curious seven to save 7% off your entire purchase of \$50 or more and get to 25 milligram CBD cookies or brownies free that website again is true him science.com and the code is curious seven. The curious realm Podcast is your source for the latest and greatest news and events in the world of the paranormal, esoteric and forbidden knowledge. And there's no better way to spark the conversation than with items from the curious realm store. Choose from fan favorites like hoodies, mouse pads, coffee mugs and more. Buy books and items from your favorite curious realm guests. Get your hands on the latest gear for paranormal

investigations and experiments we discuss on the show open your web browser and stop by the curious realms store at [curious realm.com](http://curiousrealm.com) forward slash store to buy the latest curious realm where and out of this world gifts for yourself, your family or a mind Did you want to open that website again? is [curious realm.com](http://curiousrealm.com) Forward slash school have you considered starting a podcast? Looking for a way to make your business a voice of authority in an industry? The podcast Cadet is the solution for you. Whether starting a podcast for yourself your brand, business school, church, or just plain fun. Podcast Cadet is here to help you navigate the waters of the podcast industry specializing in one on one consultation and training with industry professionals in fields ranging from podcast technology and editing, to distribution, monetization and even social media strategies. Podcast Cadet tailors their services to the specific needs of you and your podcast. Do you already have a podcast and trying to find ways to engage and grow your audience? Sign up for your podcast Cadet audit today. And let us help you explore new and exciting ways to leverage your content and elevate your podcast brand a whole new level. From consultation and workshops to affordable podcast production and maintenance packages. Podcast Cadet is your one stop shop for everything podcasts related on the internet. Visit [podcast cadet.com](http://podcastcadet.com) today to sign up for your consultation or training and use code curious wanting to save 20% off your entire purchase. That website again, is [podcast cadet.com](http://podcastcadet.com). Well, hello, everybody. And welcome back from this commercial break. Thank you so much to our last guest, Dr. Kimberly McGeorge she is of course the owner of the secret to everything secret to everything.com. She has been one of our best supporters, champions and sponsors over the last year since the time that we have rebranded as curious realm. And speaking of champions of the show, Jared Murphy is our next guest in this segment during our pre recorded segment this week, and the reason I bring him up in such a fashion is actively because Jared was one of the one of the many catalysts to the rebrand of this show and to the idea that it was obviously on a bigger trajectory than its previous name, dudes and beer begat for it. And we needed to honor that we needed to be able to bring these messages be able to bring these technologies be able to bring these researchers in their work to a larger audience, then that title would allow. So thank you so much for your input, not only as a guest and listener, but as a friend, Jared, for that, and welcome back to the show. How are you doing?

1:13:16

Oh, man, thanks for that intro. You're welcome. I am doing great. I am happy to have been a part of that evolution. You were well on your way. You had so many great things going on the momentum and the fans and it was so fun to be on the show. And then I mean, I think you really framed it well. But I also I think it's just great that you know, you see an artist working on something like okay, I'm not saying he's built the David for everyone listening. But, you know, you see someone working on somebody that's so professional and it's, it's boring. It's so great. Well done. And then you just step back and go, well, the only thing missing is a hat or a scarf. Like oh, oh, look at that. Curious realms.

Chris Jordan 1:14:05

Sports shirts. Let me get the mug too. Oh my gosh, you have a BioCurious from.com forward slash store. I shave Shameless, Shameless, shameless self promotion. Jared, you pitched over the plate for me, buddy.

 1:14:22

How else do we get support to keep this thing running? Not aliens.com. I'm getting redesigned. I am I was severely setback. This is this is working for us. But I have not aliens.com There is the new book. I really am trying to get it out for everyone before Christmas. It's so close. And we have this website that I was hoping to have redone. It hasn't been. I did do the live event in Salem. And it was ironically I'm going to do it again next year. It will be my third year I'm going to do it again. And I will do that again actually and then yes not aliens beyond prehistory it's not aliens, not aliens beyond prehistory. This is going to be the new book there will be a hard copy. And that will be available along with a paperback that is hopefully still going to be here prior to this Christmas so what are we on?

 Chris Jordan 1:15:19

And this is a this is one of the original copies out there if you if you search the book Folks, I'm here to tell you you can still find an original out there 20 It is crazy now and it's hilarious to see it you know because I've I go to a lot of conferences now Jared because of the rebrand of the show I've had the opportunity to to sponsor a lot of great events across the country this last year and it's some of them I got to meet some pretty pretty up there folks, you know, and Nick Redfern is one of them that just a classy guy really fun, really down to earth dude, but he will him and King Gerhart both will tell you that like, yeah, you know, like, you might be able to find one of these online like they've always got all their books on their table and people ask if that one's for sale, and they're like, I don't know, I have a problem like going and paying \$300 For my own book. Like if like that's literally my copy. And if I sell that to you, then I would have to go out and like spend 300 bucks because that's much one of them cost now.

 1:16:26

I know it's bananas. I don't understand. Don't do that folks. The new one will be the hardcover it makes the hardcover for like what it's going to come out at so much cheaper.

 Chris Jordan 1:16:40

Oh god yes. And

 1:16:44

and then there'll be the again, there'll be a softcover and there will also be a digital copy. And when all of that is running out, I will work on an audio. But till then that that is that is happening. And the website I have met with some new people to revamp it. We're going to continue to plug not aliens, documentaries and interviews into the actual website of not aliens.com We have some wonderful supporters that are behind the membership wall. However, like you said, if we can get the not aliens store run in and maybe get our own little hoodies going

 Chris Jordan 1:17:21

Chris Jordan 1:17:21

absolutely I can I can point you in the right directions with that not just so you folks know like there it is. Out of control. When don't do it. Don't do it. Wait for the new version, believe me. The all kinds of things that are in there had been fixed, had been prettied up there is a whole new slew of pictures with this research be color. Yeah, collar. It's gonna be fantastic. And actually last time we had you on Jared was just I want to say like 1015 days before you went and did

1:17:57

your Stonehenge,

Chris Jordan 1:17:59

America's Stonehenge there with Dennis stone. Let's let's go into how that when,

1:18:06

you know, it went great. People showed up that some people drove eight hours, six hours, four hours, there was people online listening. And the lecture that was recorded will be out on not aliens.com that will be available. I do have a rock fin channel, not aliens. But for everyone out there, not aliens.com We'll have that available to all. It'll go to members first probably for about a week. And then it'll be available to everyone here in the next couple of weeks, likely before Christmas. And that was a fun one because it was about synesthesia is and about hidden things that we think are natural or accidental human abilities that we sometimes chalk up to superhuman abilities that might be more related to maybe ancient lost biotechnology and how that would have related to building something like the pyramids, specifically any any ancient megalithic construction or ancient construction with polygonal construction. So with the various Ziggy's ag bot blocks for those that don't know, and for the idea that these buildings and pre pre pre dynastic Egyptian or Aztec Olmecs Toltecs or Mayan times these were buildings that were built by very advanced humans that were dealing with the frequencies and energies naturally of the earth like earthquakes, but also dealing with technology that may have allowed them to directly feel or connect and communicate through soil and or through bio networks that may have been more translatable and kind of a one and zero sort of way and through a frequency network energy network that was connected right up through these constructions. And so the whole lecture for about three hours including the question and answer period is about that. So it's pretty interesting um, Lecture and the slides you'll be able to see that along with the voiceover that will all be available here before Christmas. That will be coming for sure.

Chris Jordan 1:20:10

Fascinating. I cannot wait to see that we just got done talking with Ella bank or not Ella bein with Dr. Kimberly McGeorge about crystals, healing Healing frequencies, things like that. And one of the one of the concepts that I have talked with denistone, the owner of America's stone hinge about numerous times is a are have they checked for any resonant frequencies inside of

any of the chambers that are there to see to see if perhaps it's something that like sitting inside the chamber and chanting you get a different, even visual effect of what the stars are, that are rising around the format of

1:21:01

Stonehenge. Yeah. Yeah. I feel like America, Stonehenge, you know, they they did carbon sampling that showed a couple of the walls going back at least six 7000 years. And that that's significant, because huge. Yeah, a lot of people there's a lot of here. This is so odd. There are current stacks of rocks, there are walls that are snake like they're, they look Serpentine, like the Ohio mud Serpent Mound, but they are all over Connecticut, New Hampshire, Massachusetts, I was just gonna say maths for you locals out there. But the area all the way up into Canada has hundreds and hundreds and perhaps maybe a couple 1000 Unidentified or hot first off over 800 known sites that are predating indigenous or what we think of as you know, the Mayflower shows up and I'm paraphrasing for everyone just to get us to modern Europeans coming here four or 500 years ago. And oh, you know, there's indigenous people here in the there are early early letters to the governor of Massachusetts in 1620s. That just don't points out that actually have the new colonists asking, look, the local indigenous tribes do not know who built these carts. Yeah, they're all over these hills are all over these walls. We filmed it while we were there. About a month prior to me doing my lecture. I was there filming for more. We're going to do a documentary about the primitive survivor cultures post Younger Dryas. Oh, he reached him. Yeah, they reached down to the Gulf archaeological site in Austin. Yeah. And that that site has a floor in it that's at least 22,000 years old.

Chris Jordan 1:22:49

Well, in that that was one of the things that we talked about with Dennis last time he was on was that connection to the hunter gatherer because number one, and this is this is not to say all Native Americans, but the Native Americans of the area, were not prone to building structure. Not not like that not like let's build a wall around an area. Everything else that that wasn't something like the Mesa builders or the you know, the Native Americans in even the central and west part of America. They were much more nomadic because of the weather patterns that exist on the East Coast. And yeah, was it more of the fact that maybe these were a means by which for them to find their way along hunting routes? Because Absolutely. A hunter gatherer society knows the stars that rule their seasons. They know they know the stars that rise when it's time to fish they know the stars that are setting when it's time to plant like they are intricately tied to the movement of the sun and the moon and the stars.

1:24:05

Yeah, they had the equinoxes the solstice is the stones and everything that's set up their their significant indications that this site was used in the last few 1000 years. And specifically, like I said, when they find fire pits directly along a wall that is clearly in the 6000 plus year range. You have to and then you have letters to a Massachusetts governor going the indigenous don't know what this is. Yeah, we

 Chris Jordan 1:24:33

just got here. We asked the local population, they're like, I don't know, man that was here when we got here.

 1:24:38

Yeah. And that's saying something because I've done they have a very strong oral tradition and yeah, you know, there's there's no mixing it there's these sites don't add up to dynastic, indigenous even or post Younger Dryas the people we think of coming down in quotes the well the landbridge people. That's such a joke. The it's There's clear indications that central North and South America have been occupied way before the biblical flood the that whole Younger Dryas event, and that's catching some people up. And I only say it because there's we're all at a different spot. But this, this clearly is just a very interesting space. It's a really neat space to visit while we talk about who are these advanced ancient humans. And I think the Americas Stonehenge is absolutely relevant because it's a site that represents that at the time of survival. There was clearly a group of humans Neandertal Denisovan, and a mystery two or 3% Human race and possibly maybe another that were breeding together really at the end of the last super volcano exploding around 7574 plus or minus, it's they say 1000 years. But Mount Toba goes off in southeast Indonesia causing what really probably was the the nuclear winter that caused the massive glacial freezing massive. What really became really at the echoing end of it, I think, somewhere between 75,000 years, and when we hit that 12,600 year mark, there's this 1000 There's an estimation that over 1000 years or the biblical flood wasn't a one day event or a 40 day 40 Night event it was it was possibly over 1000 years, that fairly quickly. You have these flash floods, you know, flooding and falling apart of these ice sheets, you know, in America, all over what would have been where America's Stonehenge is. So there's just, there's definitely maybe that's the last crescendo of what really is a secondary catastrophe, and that it froze into that state because of what happened 75,000 years ago, and are the people between 75 76,000 or 74,000 years ago, and the people to the Younger Dryas are many of them, just survivors of that, that ancient catastrophe and are the echoing stories of like an Atlantean 10 city population really an allegory towards a worldwide, the advanced survivors that built the SIMATIC biotechnical. You know, engineered, soiled engineered biologies that connected with things had functioning third eyes, in reference to the pineal gland that it wasn't subconscious or 10 or 15% of our brain that these survivors have possibly 80 or 90 or 100% cognitive abilities. Did they separate themselves and as they rebuilt are there are really the allegory of Atlantis as an indication that they were more parallel that they visited with their man satchels, and taught people how to farm again, did they show up like a Peace Corps and help get people at least the survivors functioning on a primitive level? Meanwhile, we have ancient megalithic ruins that indicate maybe a potential attempt to rebuild that global grid. And yet after the you know, after that 12,600 year mark, we got hit unluckily with something else. Yeah, these man bags show up all over the world. And yeah, something that I haven't talked about a long time since you got the picture up. They because they show up in these DD things and Gobekli taffy.

 Chris Jordan 1:28:36

There it is right there and mine are Olmec Oh, yeah. And

1:28:41

then on the Gobekli Tepe, a pillar that they're so excited about, they bring it up in the new Graham Hancock thing right there with the vulture your way, you know, they have the man bags across the top. And they're also there's some interesting indicators of the animals or the birds that are on the Gobekli Tepei statues are showing up on the Easter Island heads. And the end for the man bags.

Chris Jordan 1:29:09

Well, everyone in you know it's interesting because you keep saying survivors of the flood, because they by all by all accounts that we have both anecdotally the world over, as well as geologically, there was a mass extinction level flood that happened on this planet at some point. And most of the stories line up with when that happened. Now the question comes to bear do we do we also follow the line of most of these stories that it was to reset humanity? Because that's what most of the stories are is that we kind of got too big for our britches. Either that or we were genetically bound with something else. And and that had to be washed clean. And like you said, survivors. They I mean, just to flip that on itself, we could be looking at the fact of those survivors may. I'm not saying that they didn't have the technology, they would definitely have the technology. But would they be using that technology? To the ends of the best of us? You know,

1:30:30

right. I think that we've and he moderating sample of government and power. I don't like the people who grab power, are the people who ultimately are the ones providing a true narrative of any actual past event. I think narratives are written to maintain and control. Yes, and I don't and or the truths are, any truth can be presented in a way that makes a case for a particular opinion. And we see more of that even in what we think of as pure sciences, whether it's math or archeology, you have people more interested in protecting their own fragile egos than truth. And the truth are the facts and the facts are not what you say they are. They're just, here's what we found, or cherry picked facts. Right. And and so when you are willing to only build a story on that, we end up with this very, I think, in fact, that very observation is how you end up with an allegorical story of well, we suck and we're bad and we deserve to be punished. I mean, what an ends. What

Chris Jordan 1:31:42

Yeah, yeah, yeah, no, no, literally it Hey, brother, we've had the conversation and on and off air. My audience knows former Roman Catholic seminarian, you could not you could not get more hip deep. In the I am a I am a worthless skin sack. Yeah. Like almost literally the words of St. Augustine, one of the following Fathers of the Church, you know, like I am just a useless waste of a human being just waiting to sin.

1:32:14

Oh, my gosh, you know, what, a way to live life, right.

 Chris Jordan 1:32:17

But it was also the fact of I had an experience. I had an experience with a dark entity in my room, it was what most people would call a shadow being. It was during a moment of sleep paralysis, and it grabbed me, and I don't care what you tell me. It grabbed me, man.

 1:32:37

Were you high?

 Chris Jordan 1:32:42

No, just clarify the

 1:32:44

situation. Hey, well, asleep made it more clear. Like you can see them.

 Chris Jordan 1:32:49

I've had those experiences as high and not high. Let's just say that. Well, I

 1:32:55

agree with you though. Because there's no way but when I

 Chris Jordan 1:32:59

took that to my spiritual director, okay, that that's when the story flips. Yes. See, because talking about the survivors, it's one of those you would think I would be you know, Well, Chris, you know, the church's data church doesn't have a teaching on it, Jared. And I was like, Okay, well, I got a big problem here, man, because you are like, asking me to accept a belief based on spectral evidence. Yet still will not accept evidence of the spectral when presented.

 1:33:37

Ah, yeah.

 Chris Jordan 1:33:40

And that's a conflict in my brain that like those synapses just don't fire together.

 1:33:47

For me fascinating. I think again, it's it's true

 Chris Jordan 1:33:50

change my faith doesn't change what I believe but it definitely changes the conduit through which I go to get my capital T truth.

 1:33:59

Yeah, because that truth has to involve all the facts and all the facts are that there are many faiths and practices that have truths Yeah.

 Chris Jordan 1:34:09

Literally telling me that evil is stalking my soul around every corner and then when I tell you something creepy grabbed me be like ah, yeah, I don't know about that dude.

 1:34:19

Well, yeah.

 Chris Jordan 1:34:22

Like the turkeys don't match

 1:34:25

well, either even the majority of this world believes in a different lawyer the problem with us is that we're blind because we're Westerners Yeah, majority of the world believes in a couple different Eastern philosophies of those and we I even by just my vernacular called it a philosophy. The reality is this is their faiths. Absolutely. And I even being a you know, winter Catholic, you're always cat it's just something you're born into. And if you if you've lived it, your your everyone knows what what we mean. But I think that in the East there are many trues that manifest in what because of our, the modality you experience the big 10? You know, you say Well, it's my faith showed me this or my experience and my faith showed me that or my faith define this experience and you get fill in the blank instead of well, you okay, there cannot be paranormal, there cannot be second sight, there cannot be remote viewing there cannot be factual, experimented with quantum, I would say more quantum than Newtonian physics,

experiments with the mind that aren't showing that for sure that there is a singularity, a single congruent orchestral Symphony of Science. And it includes not a single faith, but a single modality that we are missing, we're banging on the blank keyboard, we're getting congruent, parallel agreement to our individual faith or system, when in reality, those paranormal projections, genetic memories that you and I have talked about genetic, collective human consciousness, that's been to a degree proven Kirlian photography, magnetic fields, the reality is that these are not separate systems. So it cannot boil down to one modality. It's not about proving one belief system wrong or not. The point is, is that they're all experiencing what is really a singular system that we are so detached and broken from, yeah, that we use these individual systems. We grew up with our faith or our family of origin stories where we haven't experienced like this. Did something grab you 100%? Believe it? Did. Your experience happened. And a lot of people would argue like an induced a drug induced of any kind, or a hyperactive work. Yeah. So there's a lot of say, like,

 Chris Jordan 1:37:06

it could even be the fact and this is this is something I've been positing to a lot of people is the fact that even the use of that changed my frequency. Yeah, to where I was in the same frequency as that being,

 1:37:22

you could have been amplified and on kind of like a steroid. And the reason it happened is because you could see it, you were jacked into something you already naturally prone to. Yeah. And then it hyper allows you to really be present, and connect. And not just a theory, but to actually connect physically. With that with that, but I don't think

 Chris Jordan 1:37:41

that makes my experience so much more frightening. Thank you, Jared.

 1:37:44

You're welcome. And I just wanted you to have something to dream about later.

 Chris Jordan 1:37:51

Yeah, my kids, you're welcome. Realms everyone's right. But in all sincerity, you know, just to loop it back to what you were saying earlier, these these ancient peoples who were quite literally living a technology. It was something that permeated the soil that they had their life existed to make that

 1:38:19

I think they engineered a lot of things and the buildings weren't just disaster proofing, I don't think it was just what we need a frequency to predict from an earthquake. Now we need a frequency to be able to connect to Carl for a phone call. And at the same time, I need to be able to project through my synesthesia is the color pattern in order for me to take away with my frequency device, the shape of this polygon or block, we need to lift it onto this location, we need to move this other thing we're about to go through a solar storm, the ionosphere needs to be tuned this way. We have X amount of pyramids working at these base sub human eared frequency systems. We have energy systems, we have communication systems, I think we're talking about a fully cognitive human race that was bioengineering down to this is the scariest thing. These are the things that we don't want to accept as a possibility. But how do you get a chicken before an egg? It's such a funny joke. We keep joking about it. There was no example of any creature on this planet suddenly going from Yeah, I don't want to give birth anymore. Let's just lay eggs. So what what's the only other way to do it? Well, you engineer creature that does it. We can get a gene CRISPR right now, if you want to work on a baby that can play the piano and has blond hair and blue eyes. We can do that. Man, we're on our way we can do gene crispers we can specialize people.

 Chris Jordan 1:39:33

We have been cross breeding animals. I mean, a prime example is

 1:39:38

the dog. All genetically engineering, donkeys are

 Chris Jordan 1:39:43

all rooted from the wolf. Every single domesticated dog breed out there, originates from that and within only the last few 100 years.

 1:39:56

You know, curious realms needs a new logo and it needs nothing The finds curious, like looking at a wolf and a Chihuahua. And going, as far as I know, it's like how do you go from a wolf? To a chihuahua to a wolf? Oh my gosh, or one with no hair?

 Chris Jordan 1:40:14

No, no, I want a dog owner until now, Jared, you have changed my life twice.

 1:40:23

You are welcome. It's the birth of everything here, folks.

Chris Jordan 1:40:27

Hurst my wife's twice. Your 444

1:40:32

You're welcome. I didn't realize I was on such a roll. The the I do think you have a society that we're we're only just scratching the surface of understanding and I think if you had these very Cocha like the stories of Eric Koecher why why did South America these man beg people? You know, a guy named varicocele, red beard, red head, comes and teaches us to farm and teaches us to count and teaches us to, you know, to do arithmetic and basic living what do you have you have a worldwide global advanced that we're in the laser bunkers that we're in the as in the well cut, engineered megalithic underground, not just spaces, but totally and systems that were there for society that I think was always prepared and able to manage large catastrophic events on the terrain of the earth before I think that they could manage the actual protection of it. And we you know, we're not I don't think it's the first time we've ever gotten to space. I don't think that these people when they came out after this actual disaster with Mount Toba, and maybe before and after enduring the Younger Dryas, they came out, and he got all these guys showing up, showing the survivors that did breed with Neanderthal and Denisovan and you know, the fish guys, they can't come out of that they come you got scuba guys, you got basically got scuba guys scuba deer coming out of the ocean, and they are teaching you how to function. And then they swim away. Like with scuba gear, and then the allegory is that well, they're fish people and

Chris Jordan 1:42:19

and if you look at these pictures on screen, folks, you can see like, here's the Dogan, people that you're talking about Africa, right there, you know, fish, human hybrids in Greece, in the in Lord Native American war, you know, em, Native American, South Native American. To be specific. Yeah, I

1:42:43

mean, there's, there's clear the the idea of these creatures Hindoo. I mean, they're all over. But the reality is that if you have a more paralleling advanced human society that, again, a fraction of them make it through, ultimately a world catastrophe and cataclysm. And simultaneously you have these surviving Neanderthal and Denise human and humans, and this mystery two or 3%, human, which may have also been our advanced ancestors. They're breeding and just living and they're, they're doing primitive work and construction. And then, and then after a whole lot of storms, and a whole lot of earthquakes and a whole lot of water melting, you end up crawling across what used to be the capital of Ancient Advanced Tannis of combat, which is now Egypt, and the Egypt has no longer capital and Tanis because it was obliterated. They start grabbing, and big and building out of the ruins, a society that we call Ancient Egypt, and then they mimic and they rebuild. And they end up with a construction that although they reused, like the Great Pyramid, that geopolymer article references. Well, not that one specifically, even but the point of geopolymers is you have the father of geopolymers, Dr. Joseph David ovitz

pointing out that there is actual geopolymers on the Great Pyramid. And if and if you have a power plant frequency tuning energy, communication, gosh knows everything that that construction could have been a part of getting hit by a comet or a scalar weapon or some sort of impact. You'd have to patch it, you'd have to fix it. And again, we don't know what kind of metals plastics, ceramics, Mike is fill in the blank Building Material Sciences 101 The actual finished layers and yes, for those who are really steeped in it, there is a very, there's a back room at the Cairo Museum and a couple packs of smokes later, you will find out that there are pieces still left a lot of people don't know this. of the casing that was on the grade pyramid. Yeah. and they are very consistence in depth. And what a lot of people don't know, is those casing stones are covered in hieroglyphs. And not just from eyewitness accounts from archaeologists that I know that have seen them, they made it really clear, these are not chiseled, like, you know, the hyperbolic, you know, the hyper hyperbolic ceiling. At the Serapeum, the giant boxes, these are very well, machine cut hieroglyphs on a very consistent level of casing and stone that is just truly unique, and appears to be possibly an artificial casing. And so maybe the entire structure itself was hieroglyphs. And it told that story are told the people story are people story. And that's what's been lost to us. And so there we go, what did you find?

 Chris Jordan 1:46:09

actually a pretty interesting article here from the geopolymer Institute. And I'm going to quote from it right now, the direction of this field varies with the ages if the blocks of the pyramid have different magnetic orientations, it would be because they were assembled in a random matter after having been extracted from the quarries then cut on the other hand, if the blocks have the same South North magnetic orientation, this would prove that solidification took place at their current location at an extremely recent geological age. So these blocks would have been made manually by humans on the spot. So Wow, interesting, interesting stuff regarding you know, the the actual crystals and layers of it to begin with, whether how they were cut everything else but to to know that we're just now getting into the world of I mean, we've just figured out the, the formula, not the full formula like percentages, but at least the ingredients for Roman concrete.

 1:47:20

You know, we're barely, we're barely, we're barely

 Chris Jordan 1:47:22

barely scratched the surface, all we did was figure out all the parts of it not the percentages or window and mix them together, which if anybody is mixed concrete on mass like greater than a greater greater than a bucket of concrete. They, it becomes it becomes pretty scientific pretty quick, if you want board right. And it is a very specific endothermic reaction that happens with that stuff. So it really is very much chemistry and everything else. And to see the fact that yeah, there were geopolymers used to add here those blocks together, things like that whenever you start looking at sites like in South America where it literally looks like the blocks were poured into place. Yeah, you're left to stand

1:48:19

now the the Great Pyramid when Dr. Joseph David ovitz did that. They found spots, like you know, there were repair spots. So yet, what was interesting was a researcher from Yale, and a Egyptologist independently picked up the research and confirmed it, that there was geopolymer patching. So the antiquity of any American Bridge for those of you listening in this country, and quite frankly, I think, outside of Europe, anywhere modern construction and rebar is used. If you go under a bridge built even 10, sadly, within a decade, but you go under a bridge that was built in the 60s, or, you know, the original Eisenhower project, and there are my gym in the Twin Cities, and we're fully aware of how badly it can go when our entire 35 W collapsed into the Mississippi River. And that was tragic and difficult. And that was a couple of 100 feet and we can't build concrete bridges to last 40 years. And you're looking at constructions in the Roman periods last time to this 3000 2000 1800 years with no issues. So how much antiquity is within a structure like the Great Pyramid that has polygonal construction on it so it has the the earthquake work? It has nubs that you see in Do you and aku and Puma Punku and Machu Picchu as the same things that you see over in South America and other megalithic sites. So when Dr. Joseph David obits does evidential reporting, of geopolymer patching, where are we, when we look at the age and antiquity of the Sphinx, where do you have Dr. Robert shock saying, well, it's 10s of 1000s of years old, and you have a construction like the Great Pyramid that might have to do with energy work or picking up the earthly you know, dealing with energies and frequencies that don't involve explosions and oil and you name it, but are a giant machine that when it gets hit by a meteor or has a malfunction, you know, how do you patch it? Well, you just use a geopolymer. And, and, and we're not taking into account the antiquity of the repairs. I mean, were they done 10,000 years ago, were they done? 100,000? Were they done? 1000 10,050 60 You know, pre Mount Toba going off was the last repaired on 100,000. Where they were they somehow a creative dynastic recipe that they they took like the Charles, you know, like the analysis of the Perry Reese the Piri Reis map, or, you know, of Antarctica being in a map from 1530. From older information. Was there an old recipe for that the dynastic Egyptians used to mix a cocktail that for them would have been very advanced and again, is a Roman concrete or tartare, a recipe of concrete. Does it really shout back to the allegorical survivor advanced ancient culture that was still trying to, in close proximity help primitive people get out of the Survivor Mode of the final death throes of the Younger Dryas and get back to farming and and try to get them out of being? You know nomads and there there there are questions here that if we table all the facts, I think it's a very fascinating world for us to get into and start actively seeking the answers.

Chris Jordan 1:52:23

Well, in number one, you've you've got to be willing to ask the questions to seek answers. And a I know, we have differing opinions on Graham Hancock, things like that, like Graham Hancock, I love Graham Hancock. But the one thing that even even Steven Meyers, who we have on the show regularly the one thing that we are told straight up from Egyptology. I've heard it my whole life. hieroglyphs get you into the afterlife. You got to have the spells up on your tomb law. So why does he should tautology keep telling us that this chamber, that's the king's chamber in his his tomb and sarcophagus has nothing in it. Smooth granite walls, not a single carved hieroglyph. And it's really interesting that now one of the things that we've rabbit hold on on their show over the last many months is the fact of just how fast a technology disappears. Yeah, I write it down here next to me. I've got a mini disc player.

1:53:39

Oh, those were a thing. You got Def Leppard and that deck?

Chris Jordan 1:53:43

No, no, but I do have Radiohead. I do have I do have Radiohead, the big theater on on, I want to say it's the bins I think on mini disc, but that is just a prime example of a technology that has popped up was useful. Really horribly marketed had they waited five years, I think it would have taken off. But one of those that was truly visionary, like it was it was yours until we saw ReWritable CDs. Yep, on the market. Now here's something that in your pocket, you could be like, oh, I want to take song number two and make it after song number eight. And then you open up the disk and you slide the little window and just like a disk on your computer. It was safe. You couldn't write over it. It was wicked cool. However, knowing how to use that knowing how to or even finding the device to be able to get information off of one getting harder and harder to learn that that is within the last 2025 years. You know, that's just an example. Another one that I give all the time is feel free to go out and find yourself a master woodworker. Oh wait.

1:54:57

Oh good luck. Feel free to go

Chris Jordan 1:54:59

out and find Somebody that can like with a hammer and a chisel or a mallet niches will rather carve you a wooden, Indian. You know, like a master craftsman. Hard to find hard to find, yet still in our parents generation 3040 50 years ago. Very easy to find. Yeah. So when you're talking about something in the scope of the Great Pyramid of Giza, and the time that it took to build, very, very likely that the dude who knew the new the mixture to build the casing stones, hey, he may have died sins apprentice Jack, what do we do now? You know, now we literally have to come up with another technology to stand on top of his shoulders, like we somewhat know what to do. But the real recipe is lost. And it doesn't take long from there for that to become a lost technology or even an abandoned technology, by a civilization. So when you start looking once again, at the Great Pyramid of Giza, it shaped the way it's used. The fact that there are even explosion, what looked like to be burn marks or explosion marks, I've always loved the theory of the Great Pyramid of Giza being used as a Hydrogen Generator.

1:56:29

Yeah, that sounds interesting. And also

Chris Jordan 1:56:32

the idea of just hydrolyzing, lime, things like that, which would be perfect in a granite thing like

this, you would end up with a great heat expenditure. And you would have to have vents, that you would be able to control the baffles, you know, to to collect all of that. And every once in a while, you may get a really big boom, that just might rattle the complex a little bit, and maybe you gotta go repair some cracks.

1:57:01

Well, there is, you know, there, there were early reports, along with Sakara. A number of their pyramids, one of the things that I find interesting is when we look at those interior spaces, a lot of people don't think about what they were found like, or that it was documented that there was actually like a plaster on the wall. Yeah. And not only was there a finished plaster on the wall, there was also in the case of the Great Pyramid, you you also have, well, a lot of the structures over there. There's indications of saltwater, of them being flooded. Yep. And so the question is, were they accidentally flooded, which I probably think was the case. But then you have a lot of indications of natural spring water under a lot of the constructions and that not being managed anymore has put a lot of chambers in different places underwater. But then the main structure of that pyramid, and mencari, or, you know, the third, well, what's left, what we can now think of is three pyramids. When in reality, there was like I said, there was probably at least seven. How many were dynastic? Don't know. But the interior that chamber was that finished plaster? Another indicator of dynastic use where they did. I mean, both series can be true. They could have plaster the interior of that space. It could have had hieroglyphic writing on it. It could have had constructions that indicate that it was a tomb, pick how many years hundreds shows us, it wouldn't matter because it doesn't date back to the original use. Everything about this construction appears. And what's so deceptive. I love this photo that you have up because you're looking at the Great Pyramids innards, from what we can tell is it's and the problem is depending on where your knowledge base is or fascination with the Great Pyramid, it doesn't show you the swivel doors that are on the exterior. It doesn't show the other spaces they found it doesn't indicate when they did the muons the French researchers had a theory about there being an internalized Zig winding up spiral walkway. Yeah. And and again, you can see that in the muons. And in the not only do we have a great space that I don't know why we're not drilling into it yesterday. Although I know but

Chris Jordan 1:59:40

what do you think I'll say why I think and then you can say why you think I think quite honestly the whole reason we have not gone beyond those lower chambers, which we know to be connected to the water sources. Yep. Underneath and that that's a big part of Stephen Meyers book is the fact that they built the pyramid as a as a water pump as a means by which to pump water out of the ground. And if you start looking at the design of it very similar to a single stroke engine, you know and if you're talking about just a chemical means of combustion to make a make a big thump upstairs to suck stuff out. Not not a bad idea. But it there's a lot that goes into it. And to see once again, like you said, the the muon study that was done. I don't I don't think they allow the digging below that or below the Great Sphinx. There is because I think they would all lose jobs. Oh, you don't think they would? Much much like if I would love to be on an Egypt tour and be like, Wow, so did they just want to doom this dude to his death or what? Like he's just never getting into the afterlife. Like they spent all this time building a temple to him just to be like, Ah, screw you.

 2:01:06

You know, the. The problem was, it's totally funny. But it's also true because funny. Well, it's so sad. Funny, because one it's not wrong. They just even if they were 100% proven right that for 100 years, 200 years, 1000 years, it was a tomb doesn't mean that's what it was when they built it. Yeah. And, or for the most of the time. And I think personally that they, the here's something I think it's so obvious to everyone who's not been indoctrinated, or those that are willing to that they were indoctrinated, but they know they're wrong. They know the truth. And I think they need to hear this from people who have always been, I think it's no different than making movies. I think they need to hear that we are their fans. I know it's been hard to be funded. But because you're wrong about something you've you've either been teaching or something you've been believing yourself are perpetuating through books and publications. If we don't care that you're wrong, that the only person who is going to fire you is yourself. You're so tied up and not. It's ironic, no one really wants to fire the people that are wrong. The only people who want to fire anyone are the people who are wrong. They want to fire the people who are right, who aren't even hired. They're not even on their team. They're obsessed with either proving wrong the truth. They're more invested in that and protecting their own hubris, which just does make you look embarrassingly simple and ignorant.

 Chris Jordan 2:02:41

It kind of does, you know, when when it boils down to it when when it comes down to the fact of Yes, suppression of knowledge of pressures of evidence, even even non acceptance of what is their true testing.

 2:03:00

It's just like, it's just like Shaggy, you know, pitcher, this, you know, we were in the bat, you let her catch you. It's like, it wasn't me yet. It's just but it's you were right there. Yeah, it wasn't me.

 Chris Jordan 2:03:12

Ya know, and it's mind blowing to me, because we did I say it on the show all the time. That that is how a science is not static. By definition. Science is not static.

 2:03:27

Nobody is ever in

 Chris Jordan 2:03:29

change. It's forever in flux, every laws up to question. I agree, but every laws up or reproof regularly,

2:03:37

I would be more impressed with a researcher who's willing to keep running like SpongeBob and Patrick, like Patrick can fall flat on his face and get up and fall on his face and keep running nothing but respect.

Chris Jordan 2:03:50

Yeah, it doggedly pursue. I don't care if it's if it's the tails of, you know, like, Merman, like we were showing. It doesn't matter if you want to doggedly pursue Why the heck these bags show up across the world, in every ancient civilization and what they're about pursue it vague, look it up. But whatever happens a and like I've told you before, about about projects, things like that. I approach it from the fact of I am I am there to document something I am not there to put my twist on it. Right? I'm not there to put my zing or my zeal on it. I am there to document an occurrence. You know, when it's funny to me and always an immediate tell whenever I show up at somebody's property and they're like, oh, you know, I'm targeted this and that. And I start pulling out things like, you know, my my gas leak detector or my Geiger counter. First and They're like, Oh, whoa, what are you pulling that out? For? I'm like, well, let's see if maybe you live on a fault line. You know, let's see if maybe they're written some gamma radiation leaking up through your through your sub basement, something like that before we jump to somebody a mile down the road with an electronic weapon. We mentioned that we need to disprove Yeah, what is provable and leave the anomaly. And once we have just the anomaly, now we got something that we can study because we have gotten rid of all the extraneous, but you have to be willing to view every facet of that gym. Yep. In Polish every facet of it. I equal amount of fervor.

2:05:45

Yep, it would be more interesting to see people just, hey, we got this wrong. Here's what we know. Yeah, again, finding the college that comes up with more questions than answers would be the more intelligent one. You know, it's like, well, we don't have this answer. Well, how many things do we not have answers for? Well, how many students? Would you like to start training to get those answers? Yeah, how many? And then then you can start getting the the hubristic award for we had 100 million questions last year, and we solved 100 We solved a million. Come join us. You know, I think the one on one hand, they say, you have a group that says everyone should have a college education, then you have another group that I find it indignant, it's incredible. You'll have a group that will say, Well, if everyone has a degree, what are they worth? And it's like, well, I thought the point was to not have idiots. And to have everyone educated it was the point was to create wisdom, but it's not we all know this. So a paradigm shift a massive paradigm shift, where you have more college franchise locations than subway, or Quiznos or Domino's, and they are literally like, Well, I was I was the graduating class of Section six of the Mayan city of Guatemala, of section 20. And then we uncovered 20 pyramids to the ground, and we went 30 feet in the ground, and we got this far through 27 Unknown cultures and we came up with 1 million more questions. That's the academic environment that should exist and it doesn't instead we have this lethargic, backward Victorian, ancient humoristic ignorance. Oh my God, Self aggrandizing

 Chris Jordan 2:07:33

I say it all the time. We need more Magellan ins. I want I mean, he was the one that was like, nope, so you think I'm gonna fall off the world? Let's find out. Who wants to come with me and find out. Because in any, you know, we say it regularly that that was one of the last big realm revelations other than like, you know, germs, the the existence of germs, the existence of planets beyond Neptune, that kind of stuff. Pluto, that kind of thing. I mean, honestly, it's like, until the last until the 1500s. It was pretty well, like anathema to say that the world was round, or that the sun was the center of the solar system. You know, is it was witchery you would be burned or driven at a town.

 2:08:30

You know, I heard the story of the man who said, You know what, I'm pretty sure we need to wash our hands before we birth children. And it's disgusting. I heard the whole story on of all places. It was MPR. Er, yeah, remember, that one was so depressing. I catch it where this guy literally says, you know, we need to wash your hands before we help a woman give birth for the child and for the woman. Of course, that's the way you're supposed to do it. But this guy was told he was a nut job. Yeah, literally murdered in an insane asylum. They they they abuse just credited him they burned him at the stake that is quintessential for the most part academia. Yeah, that is it. It hasn't changed.

 Chris Jordan 2:09:12

Yeah, not not that far back, you know, and we are not. I will say this. We have the tendency, but are not by nature as humanity a deep species my man.

 2:09:31

Well, you know, I think at this point, I don't think we realize how urgent it is for us to reactivate in code so superhuman abilities, those Wim Hof consciousnesses and our autonomic nervous system and our our meditative, unconscious states becoming conscious, I do think our abilities to physically move and to create and meditate. There are, again, we have psychosomatic drugs that are amplifying what I think are are actually a conscious states that we live and exist and that we, of course, can't move in that direction yet. But my curiosity is to brandy to actually get us from being curious into actually being actually those things

 2:10:19

became debating that in reality.

 2:10:23

Yeah. And so it's not just I think a fun conversation but everyone out there listening I'm sure there's different points that might tingle their, their connection to the human ether, to the

collective consciousness to genetic memory. And wherever they are in their meditations or their systems. The more we positive gene effect, the more you eat the right way, the more you movement complexity and change your meditations and change your mindsets and work with what we've seen in on the quantum level of water consciousness. I think that there's a lot of methodologies or labels we've put like, the Emoto, Viktor Schauberger, and all that work, and what we've done with Second Sight and or like you said, remote viewing and, and these paranormal things, in reality, somehow this is a conscious system that was part of a biotechnical system that was also including inclusive of these large, advanced ancient structures, and they predate dynastic peoples, but dynastic peoples did some really creative stuff and whether they're hydrostatically moving blocks or not, I don't I don't think the advanced humans that were engineering I think biology's not because they thought, you know, hey, I just, you know, like some people make apps for the app store. Oh, look, I made a new butterfly. I don't think they were just doing it for funsies. I think it was no, there rejected.

 Chris Jordan 2:11:52

Well, there was a difference, there was a difference. And, you know, once again, harking back to, to how fast things disappear. I remember my grandfather, but like, had articles in the newspaper about like, the daikon radishes that he would grow that were like, you know, 12 pounds, things like that. Our connection to such things, and once again, to bring it back to the beginning of the whole conversation, when we were talking about the people that obviously built the complex up at America, Stonehenge, intricately tied to the world, to the movement of stars, to the seasons, to what to eat, what not to eat, what's safe to eat. All of that was intimate knowledge to them. It, it was beyond sacred knowledge. It's literally that avatar concept of like, it is what makes them live. Yeah. So it becomes part of their religion.

 2:13:06

Yeah, and then the problem is, when you have 50, or 80, that's all being that on being a true statement on its own, but adding on to it, if you get 100 years of it going from a factual point, two, a that's the that's these waves that really blur things where 100 years goes by and it becomes a religion, or a belief. Yeah, not a fact. Yeah. And then before you know it, you have hundreds of years or 400 years or three or years, if the society remains where something that was once a fact becomes a belief system. And then if that entire belief system is or and society is wiped out in a way, you have an abandonment period, or you have another type of society, having taken it over imposing their own opinions, and you have this constitute their adoption or abandonment. It's constantly a brace of velcro is how I'm going to call it no of societal info. Yeah. And then relations. It's just, it's connecting and sticking. But then when you tear it apart every time or even a little bit, it's always ruining it a little bit. And you're putting it back together. It's still sticking, but it's not sticking in any way. You want to pull it apart again, but then it is. And it's just it's so it was I just think we had such a period of chaos. When those primitive cultures that were using those rock sites. And again, here's the other thing. We know that well Dennis knows that there was no on on that those planes below where America's America's Stonehenge is on what's left of a ground down glacial mountain. But that area, it would have been on a high plane that was unknown, at least a modern archaeology and paleoanthropology that those acres and acres and miles and miles of that below Valley was burned. So that was grazing for game. And so what's great about this photo that you just brought up, is that all those trees, what there's a couple interesting things, those are big trees. Some of them are over a foot wide. But all of those trees were wiped out in a massive hurricane

80 something years ago, 90 something years ago, and then prior to that, there was no tree. So were these woods, were these were these wood or any wood structures that would have been coinciding with these stone structures? Do they just rot away? burn up? Get used for firewood? There? Yeah, the reality is you're looking at a site where literally all the trees is 110 acre site that the that denistone owns. That's been in their family, 70 years. It's an active archaeological site for over 70 years. And lots and lots of scientific papers. This is not just a bunch of people walk around feeling it? Yeah.

 Chris Jordan 2:16:02

Oh, and once again, this is a prime example of one of them that I was talking about where I was like, Have You Ever Have you ever had the interior resonant frequency of one of these chambers found? Well, because because by doing that, you could figure out if if perhaps they were using that structure, as once again, a place to meditate, chant ohm, that would vibrate at a certain frequency and even vibrate your body that way, or even even show you the direction getting inside of it, and darkening your surroundings so that you would be able to use these other stones spotting stones for finding other alignments, things like that.

 2:16:53

Yeah, so you, you just did a couple of different on that photo, you know, the big chamber is at the end of the giant table there where the green is the grass. So for those of you looking at the screen, there, it looks like a patch of green where the where the mouse just to the left of the SUV you go, right? Yeah, right where your mouse is now. That's the large chamber. So there's enough room in there, it's L shaped that chamber you can stand almost fully upright in at six, two. And then under the table, there is a window, like you could shout Yeah, under the table into that space. So now dynastic Lee at some point, were there primitive people that may be used as an altar? Was it an ancient Cold Stone for ice cream? Was it for crashing and crashing?

 Chris Jordan 2:17:45

And of course, to me the connection there, between the chamber and and the, the, what's called the altar stone really, really does ring back to like ancient Greece and their temples and the way that they had ported sound holes for the priests to chant and things like that make it seem like the, you know, the beast that was near the fire was still alive. All kinds of things. It was it was pretty interesting.

 2:18:22

Yeah. And there is besides that one hole. I mean, the Archaea acoustics I think are pretty limited. I know. I know, Dennis has there have been people who've done some of that work. They've done a really great job of strain and try to get rid of some of these trees that are destroying the site. I love trees, but I do not love them when they're destroying stuff. We haven't figured out Yeah,

 Chris Jordan 2:18:42

yeah. And I mean, once again, if you look at the size of these trees, they are they're smooth and the last 15 to 20 years. And yeah, directly on top of what would be these cavernous structures that are built so definitely encroaching upon their structural integrity.

 2:18:59

Yeah, they need to go there, they and again, they went to bed there anybody who occupied the site, they were they were burning the value below for game and to keep it grazing land, so they didn't have to go far for hunting and gathering. So you would look down on 20 miles, 30 miles of just, you know, just between width and not even the length of the valley, but you would be able to see all the game you ever could have wanted. And up on here, maybe 7000 6000 5000 years ago, any harvested trees were a part of structures or part of this building. And then you have a family that moved here to this construction in the 1800s. You know, this thing was occupied. But what was it in its entirety? What was it in its ancient periods? I don't know. And yeah, and over seven or 6000 years at a minimum, it could have meant many things to many people. The Ark the Ark yo astronomy alone, along with the Ark yo acoustic acts from the chambers that do exist, they may indicate not origin cultures, or they could be for a hot minute related but then separated by even what points of the astronomy they were worshipping or caring about. But to your point about hunting time of year, whether or not they should be moving. This is a site by the way that I'm maybe Dennis did talk about it but relate other mountains other Yeah, like past this stone, there is a another, you know, 30 miles away, there's another mountain side, and there would have been no trees, these trees would not have been there, you would have been able to see all the way to the other mountain side of a campfire, you could have communicated with each other. You may have even I don't know what the echoing and the acoustic version is, you would have been able to get maybe a communication without leaving your top. And so were these sites, mountaintop to mountaintop to mountaintop? And were they intentional? Yes, some of these stones are a couple 100 tonnes. And if you were if you were the colonists that they say the shoemaker that lived on this site during colonial times. They're like, Well, they did all this and it's like I never going to be bored enough trying to survive that I'm going to stack this Dolman I'm just I'm not going to stack a dormant. Just you're not going to do it. There is a major major, a major currently dormant back at the site. There's a major dormant not far from what you're looking at right now. Fault line, in fact, it's right there. The grass line to the right, in this photo that is actually on a sleeping fault line. That is the fault line. In fact, this shift up in the stone, that's actually a fault line. So it's so funny you were talking about like maybe we should find out if you're getting nuclear irradiated. Well,

 Chris Jordan 2:21:56

you know, and it's interesting because if you go back to like ancient Greece, the Oracle of Delphi, things like that, like yeah, that's pretty much what it was traced back to was the fact that like, there's somebody sitting there near a natural fault line with a with a natural gas source. Goey, goey leaking out all day. Just say and every once in a while. Yeah, you know would would go into a visionary seizure. Cuz Well, oxygen and not having it you know.

 2:22:26

11 2:22:20

I bet you saw some stuff along with almost dying of some toxic poisoning. Yeah,

C Chris Jordan 2:22:29

yeah. Me It's so and only a chosen few could be it well, because the

11 2:22:36

others died. Yeah, the other ones got cancer. The guy we

C Chris Jordan 2:22:40

really didn't want to talk through them. really upset with us offering them up. Yeah.

11 2:22:48

That's it's amazing how people go at this,

C Chris Jordan 2:22:52

um, but but to think of this as a, a loss technology to think of this as once again, a shift of vibration, even if you're looking at America's Stonehenge and its alignments to think of it as a way to keep yourself in tune with the environment around you once again, something that people even even Anglos not too long ago, were very tuned into like within within the last 50 to 60 years and not so much anymore, man. And it's really interesting to to see that leap of technology and how fast that happens. And then to kind of think about it in that back engineering sense of Yeah, what uh, what if the technology that you used on the daily just went away?

11 2:23:50

Well, if it was especially if it was a solid state hard drive Yes, solid state all these high court sites there's so many things about we again we have parallel successes with crystal technology where really it's more crystal woowoo where we we have some this energy we know there's energies we know that there are sciences behind crystals that that's why they're in all our computers. But yeah, but what if these large courtside structures and the way they were again, I mean, I don't understand if I can't get my head around the fact that we can be each buy up a grow crystal kit, you just grow crystals. And it's like how does that work? And like how can I do that? And

C Chris Jordan 2:24:38

what what is there it out?

 2:24:40

Right and I right? We don't have time because I really could get no no, but what if we were growing our own solid state hard drives there there have been some guys that have made some great jokes about a I'm gonna I'm gonna some kids gonna stumble into some new, you know, flash technology and they're gonna plug into the Great Pyramid of Giza and it's you To turn back on or download. And so, you know, we have the core sampling from you know, this just hit the news. I think we chatted about this once. For everyone who don't recall when they found in the 1950s, a core sample was taken out of one of the original Sarsen stones at Stonehenge. And that, there we go. There you go. Yeah, of course, they put the Bible on it. Oh, my God.

 Chris Jordan 2:25:28

Oh, you miss book. I get it. But yeah, we're already talking about storing data on crystals, everything else?

 2:25:37

Well, yeah, so the sarsen stone is mostly silicate. And and and they didn't know that until they had the destructive core sample that was returned to them from that couple in Texas that had taken him because they had helped at the site. And so I think that some of the original stones represent construction material from what would have been a more advanced construction. And then what you have the iteration at Stonehenge, one is completely interpretive. And from the 50s and 60s, and two, you have 1000, the last couple 1000 4000 years of use that is surely just abandonment use, but the sarsen stone being silicates, how many other constructions are using crystal technology? That is actually memory storage, that we just don't even look at and recognize it as storage? I mean, who would look at that little chip that you just scroll by and say that that was technology?

 Chris Jordan 2:26:34

Yeah, that's just literally or anything is stored on it?

 2:26:38

No, not definitely not billions of things are for billions of years.

 Chris Jordan 2:26:44

The exact number was 13 billion years at room temperature able to store there on that little thing able to store 380 terabytes for 13 billion years. So yeah, you're literally talking about the the idea of one of these being the the library of Alexandria

the idea of one of those being the the Library of Alexandria.

 2:27:17

Right. And it's so funny because along with it, there was an I keep meaning to give this thing some street cred, the second biggest, or they always say it's a second because now they've already stated Alexandria, but there was the Antikythera device was likely from a Greek library. And there was actually nine to 11 large libraries like Alexandria, and we know of all of them, we have them by name, and I am blank. I think it starts with a P. For the, the Greek one I'm I can't believe I'm blanking on it, but it's, it's where they think possibly the Antikythera device was coming from or going to. And at the same time, we we have these repositories of knowledge that clearly represent a more ancient period of of knowledge. And meanwhile, we still have that Oh, slightly available to almost no one Vatican Library.

 Chris Jordan 2:28:15

Yeah, yeah. Yeah. I mean, you do. I mean, you can get some generalized access and go and visit. But you do have to be a researcher of some insane credibility to be able to get into the annals of such thing. Oh, there

 2:28:27

are some other requirements. Did you know you have to request exactly what it is you're looking for? Yep. You have to know where it is. How the hell would you know where it is? Yeah. Yeah. You're supposed to know what it is where it is? And if it ain't there, and it's not where you say it is. So you have to leave? Yeah. I just feel like there's some limiting factors. It's actually rural. Its world, right? No news. And they're hoarding it. And I think that should be illegal eventually. But hey,

 Chris Jordan 2:28:58

well, you know, there was the whole group of hackers that claim the fact that all data was from God. And was the sovereign property of mankind. Pretty interesting concept.

 2:29:15

I'm hearing myself in my mind, and what I'm about to say even shocks myself, the Catholic Church, the Vatican has stored this information. I'm gonna say it. Go ahead. If we're going to make it public availability, sure. They have we have to pay the Catholic Church for the fact that they have stored it and not an easy task. No, no. And and the amount of technology and effort they have put into filing, maintaining and having that library I can't believe I'm saying this, but they deserve to be paid. So it's a lot. It's a lot what it's meant If, and I can't fathom the as a technology guy and for you, can you imagine what the energy costs are to keep it either cooled or not humid or dry? Or yeah, did I must be horrible. The money and 10s of millions or billions of pieces of of information that, you know, they couldn't hire enough people to do it, I

 Chris Jordan 2:30:24  
think from works of art to chunks of buildings to

 2:30:27  
Yeah, layers and layers. I mean, oh, my God, you know, years ago,

 Chris Jordan 2:30:31  
it's literally the equivalent of the Smithsonian meets the Library of Congress.

 2:30:36  
Yeah. And I think that if there was a way to baby step away to compensate the Vatican, the church to get them paid, so that we can just get legit access and start digitizing. And here's the problem. You have parchments that once someone got smart enough to X ray for iron, they've been reused over and over and over and you have, you have layers of information that predate Bible information that have Greek and Roman stories on it. They did. You know, we have parchment. So digitizing what the words that we see isn't going to just cut it. Every document scan would have to be scanned with every layer of technology we have in order to see if whatever information is on that. And then I don't mean throw the document away. But then there's DNA and assorted other information about the parchments themselves.

 Chris Jordan 2:31:29  
Yeah. A you know, that is that is something that we talk about regularly on the show with researchers when it comes to evidence is that as opposed to DNA, which can be very, very hard to store properly, everything else and even to maintain a usable amount of it. for later use frequently, what you'll get is enough for your study.

 2:31:52  
Well, we have sedimentary DNA testing now. So we

 Chris Jordan 2:31:55  
that's what I'm saying, though, is that we have vast new means by which to test a lot of this material, despite where it's coming from, we'd be at the Vatican archives, what have you.

 2:32:08

Right. And I think, from a profit center standpoint, also on a richness of information, everyone stands to benefit by paying the organization, what we need, in order to get access in order to digitize every format for the world to study we would get so much more done. But also it's a it for all the other things this information should be paid for. And they should be given a pat on the back and we should be working together to help its preservation. But the the accessibility factor is abhorrent is. Yeah, it's outrageous. And it's a crime against humanity, I

C

Chris Jordan 2:32:56

would I would tend to agree on that end, you know, the fact of access to any of it and research because once again, we're looking at a paradigm that may change. It's on every level. It's people's careers. It's people who have numerous books that are now being used in the halls of academia. Really religion whose Yeah,

o

2:33:22

all of what you're saying. Yeah. No religious. Well, right. And those academic books are hundreds of dollars. They're used for classes. They're used for degrees, and they're completely out of left field and wrong. Yeah, some of them.

C

Chris Jordan 2:33:34

Yeah. Yeah, it just happens to be you've got a fantastic publisher and can get things out there. And, you know, much much like any of it, how much can you pay to get it out in front of the audience?

o

2:33:47

Yeah, no, no platform for asking the questions. The platform for experimenting with the questions you want to ask. That's what we need help with. That's what the army of listeners that's what the rest of us are for is to feel the experiment with what it is our questions are and to experience not just a factual reclamation of our past but to reactivate abilities that could cure cancer or correct an imbalance in your body that has been causing you frustration or pain or, or you know, there are, there appears in the historical record, a more durable way to be a human being and we seem to mesh it between our technologies that we think are natural biotech and our our ancient and our constructions that it's not a matter of of a woowoo functional way it seems to all be woven together in a fabric that we don't we don't see or recognize. Yeah. And

C

Chris Jordan 2:34:49

Jared, thank you so much for your time, man. It is always a pleasure talking with you about these topics. It is I cannot wait for the new version. None of it's not us worse or it's not aliens worse, it's us to come out. Please do keep us in cycle with that. Until then let everybody know

where they can go to follow you where they can go to keep up with your work where they can go to subscribe and get out of your fantastic work.

 2:35:21

Yeah, so for now go to not aliens, we have a member area, please support us anyway you can there, wait for the book to come out definitely would like you to do that. You can go to not aliens on YouTube, but I would prefer we're trying to put everything to rock Finn, you can go to rock Finn, and not aliens we are they're not aliens. And then I need to update this, you know, my, my, my page, but when you send me some links, and then for next iteration of the website, you know, it's not going to change the.com So it's not aliens.com not aliens on rock fan. And the book will eventually of course be available on Amazon. Awesome. On my website, I'll have signed copies and I'll be bringing with me to lectures and events. So that will be that will be a thing.

 Chris Jordan 2:36:15

Absolutely, man. Well, once again, thank you as always for coming on. It's I love our conversations. They are always fun, they are always energized. They always go places and talking with you about technologies and and what we have lost as a society and what what I guess even the changing concept of what a technology is, you know, people people just plain out forgetting that. Yeah, you know, believe it or not like a shovel and a hoe is technology. Yeah, yeah. Shovel go. I guarantee you you go bring a shovel from from Ace Hardware to a dude in the 1500s you would be like a god to him.

 2:37:07

On that note,

 Chris Jordan 2:37:09

thank you are literally Prometheus reborn, folks. You know that,

 2:37:13

you know, the depth of that though, is when you have these super elite gardeners that know that gardening with copper tools is better than cast steel. Yeah. So we have a whole nother Pandora's box because you bring up a point where there's a known relationship with the plants and the energy in the soil. And they use copper. Yeah, well, there's a whole nother reason for that. Yeah, absolutely. And to you and I were just dumb enough to think well, one shovel is prettier than the other. But other than that, we wouldn't think of it as a that there's a magnetical relationship, that there's a frequency energy relationship of a copper spaded shovel versus a big hole. Yeah. And versus our hands. You know, it's like we'd be thrilled with the handle. Oh,

Chris Jordan 2:38:02

that's because there's a difference between digging a plant up and harvesting a plant.

2:38:08

Yeah, well, big difference. Those layers we digress.

Chris Jordan 2:38:13

Yeah. So once again, Jared, thank you as always for coming on the show hold the line while we close things out while you are online. Everybody checking out not aliens.com and all the amazing work of Jared Murphy make sure to stop by curious realm curious realm.com is our website that is where you can find our store curious rome.com forward slash store you can buy books buy our guests. equipment that we talk about on the show, you can download our free app, you can stop by and visit the Knowledge vault. Make sure to stop by and visit our share your story link curious round.com forward slash story. If you have been touched by the paranormal if you have had a paranormal experience. If you are a targeted individual if you have been abducted or had any kind of paranormal or cryptid experience, stop on by share your story with us and we will share your story anonymously. With our guests on the show are researchers. We will bring these topics to them and maybe be able to get you some answers. So thank you so much as always for everybody for staying tuned for listening to the show, for supporting our guests and supporting all that we do. Make sure to take care of yourselves take care of each other and remember, stay curious. We'll talk to you soon. Bye bye. Thank you for tuning in to this episode of The Curious realm.
