## SUMMARY KEYWORDS

people, talking, nasa, human trafficking, kids, trafficking, put, years, happening, good, data, scientists, thought, topic, find, information, children, ai, curious, started

---

00:17

Coming from the city of the weird

00:21

exploring topics from the esoteric and unexplored two dimensions are known.

00:28

Shining a light of truth on the darkest corners of our reality.

00:34

Welcome to the curious realms

00:51

Hey knows when I'm supposed to hit that button. How you doing everybody? Welcome back. Happy Tuesday night.

01:01

We have an amazing guest in studio tonight. very good friend of the show. He has been a board man, you've been coming on the show now for almost six years. It is it is mind blowing. I love it.

01:13

Love it. You're you're definitely up there as far as appearances and continuous appearances on the show. And definitely one of the one of the guests that whenever we have you on, numbers creep up for a little while. Because of the topic. So welcome back to the show. Billy Ine Kane

creep up for a little while. Because of the topic. So welcome back to the show. Billy Joe Kane, everybody numbers up everybody. Yeah, absolutely. Here we go. Notifications are silly. Do all that stuff, click it. So click it or ticket or, as we say here in Texas. So Billy Joe Kane, as many of you might know, is the founder of radical empathy education foundation here in Texas. He is also co founder of PBJ learning.

02:00

Feel free to stop on by and check them out online folks, you can you can find them right there online red reef cares.org is radical empathy Education Foundation, and PBJ learning.com.

02:15

The topic tonight is a rough one. It's a tough one. But it's one that I have I have come to consider a cause of my program, Billy and that is that is human trafficking, prevention occasion. To big word, you got that right. Education. And that's just it, you know, trying to get people to understand exactly what human trafficking is how it is different than the typical situation at the border or something like that, where you know, you're talking coyotes and smuggling and that kind of stuff. There's a lot of confusion about the topic. And it's and the media isn't doing their job of trying to educate people, in my opinion. So it's up to us to get out here and actually try to have that conversation with people directly.

03:05

So one of the things that I found is really useful when we start having conversations about human trafficking is to actually go through the definition of what human trafficking is. And human trafficking is essentially, someone unfairly profiting from someone else's effort. And human trafficking has three requirements, according to the National, the National,

03:30

sorry, the TVPA, which is the Trafficking Victims Protection Act. And those are action means and purpose. And an action is essentially having someone or possessing somebody or presenting somebody for means, which could be through force, fraud, or coercion, like you're tricking someone or forcing somebody into

03:49

selling their body or their labor for sex.

03:53

Or sorry, sorry, selling their body or their, or their labor for a commercial exchange. So basically, somebody is benefiting from that. And so everything else that you may think about trafficking that is happening because somebody comes across the border, that's not necessarily

trafficking unless that person is being taken to a place where they are actually going to actively be trafficked. So still something horrible.

 04:17

Now, oddly enough, unless you're paying to get across that border yourself, what translation what is trafficking

 04:26

is getting a bunch of people from another country on a bus or a plane and taking them somewhere under the illusion that hey, there's jobs there waiting for you or, you know, like under coercion that when you get there it's going to be better than here that there have been traffic if someone if someone financially benefits from that that is trafficking. Yeah, that's right. Yeah. So it

 04:54

the How did you first come to the realization of this Billy, because of

 05:00

With the conversation we were just having with my wife, Amy, front.

 05:06

As she was saying, at least generally, generationally right now, his parents were pretty close to the same age, she was like, the issue is, of course, we were brought up with the we were the generation of after school specials, like I remember the

 05:23

the episode of Different Strokes with the bike, you know, and the guy trying to touch Arnold, and things like that, right. And those conversations happening on TV and happening in after school specials. And, but we never heard about human trafficking. We heard a lot about drugs and how you can get them behind the Kroger.

 05:46

Right. I don't think I knew exactly where to buy drugs until I saw most of those.

05:52

I see what you're saying.

05:55

But but it this was this was not on the radar. And and as Amy was saying, it seems to get lumped in with like child abduction, and things like that. Where were helicopter parents and people are as same as our parents were really, really worried about child abduction. And it's like, you know, your kids more than likely going to get struck by lightning on the playground. Right for their abducted in broad daylight on the playground like that is that is a pretty rare scenario. That is like a one and a half, one and a half to 2%. higher chance. Yeah, of course. And then that you're right. It's it's higher in certain areas. But that's not really the point. The point is that it's incredibly low. Yeah. Is my mic on? Or is it working and coming in full for you? Because it's kind of popping in and out on this ear? Okay. You're a little bit. Just wanted to make sure. So let me change over. Okay. I'm sure that'll be fine. Sorry, I just want to make sure that everybody's getting good. Oh, yeah. No.

06:52

But okay, so yes, that's right. That's a that is.

06:57

That's definitely the case. Yeah, yeah. And

07:00

unfortunately, because of that, it gets obvious skated, it gets hidden away and gets put into the realm of, well, that's not something that you should really panic about. Because once again, abduction cases are in the low low, low percentile, however, right, the chances of your child being socially groomed on social media,

07:22

the chances of your child possibly knowing somebody at their school who might be traffic, or something like that, or they are, you know, are much greater, right and, or that your kid is going to be a victim of sextortion. If they get tucked into sending a nude to somebody they could be, they could now get in trouble for creation of child pornography. I mean, there's a lot of things that are that are that are very significant, that are not human, they don't rise to the to the cause of human trafficking, necessarily, but they all do get lumped into the same thing. And I think there's, there's something going on, and I'm trying to really put my finger on it. But when people are thinking about human trafficking now, it's it seems like they're putting that on.

08:04

You like a q&a and sort of level, when all of those other things that we're talking about the social bullying, the social

08:12

extortion, and things like that. That stuff is extremely real. And it's extremely manipulative. And it's happening on a broad scale that is unimaginable on the internet, with AI, with chat bots with automated tools, that the number of things that the number of vectors that your kid, or you or your adult, you know, elderly parents are being attacked through all are part and parcel of things that could lead to human trafficking. Human trafficking is just the bullseye for all of this stuff. Yeah. And it's like, for some reason, it's all kind of just getting lumped over and into the Oh, though, shouldn't worry about that. It's like no man, there are certain things that are extremely real, like your kid, if your kid has access to the internet, your child is in danger. If you can, if they can get SMS texts back and forth. If as soon as they get one SMS text that they click on, that kid could be going down a pornography road, they can be getting tricked into doing things that that you would never expect. I mean, there was a kid recently that had come back, the family came home from vacation. And in the middle of the night, the son got talked into exposing himself through the internet, and they blackmailed him and so he killed himself. like boom, you wake up and you you wake up and your kid was murdered by somebody on the internet, you know, and it's like they're they use our very human need for love and attention and affection against us. Well, and that everybody isn't perfect and who's who has any sort of

09:52

armament or armor for this stuff unless your your parents are like psychiatrists or psychologists to teach you from forever. It's like

10:00

They're more sophisticated than we are. That's all there is to it is what they do for a living. Well, well, yeah. And, you know, unfortunately, the people that do things like this would be they

10:14

a pimp a madam things like that there there is a

10:19

associate sociological need inside of their psychologically that that leads them to that point of one of control, you know, something gets them under their control. That's absolutely right. And it's done psychologically, as you said, yeah, it's a slow process. It doesn't just happen. It doesn't just happen. Develop your trust over a period of years. Possibly a prime example is Chung Kim, are good friend, if you're out there listening chunk. Hello. She says, Hi. I just talked her morning. So yes, I'll say hey, awesome.

10:54

And yeah, you know, she she was a young person who fell in love with somebody. And he, he dazzled her and had a uniform and all kinds of things. And once she was away from home, and on her own with him, and somewhere where she couldn't support herself without him, things like that the story changed.

11:16

And slowly and surely she was pulled into the world of that. Yep.

11:23

And yeah, it doesn't take a whole lot. It doesn't take a whole lot. Like you said, it's that it's that I mean, even you, we talk about it on the show all the time, the the want of confirmation of belief, you know, that can take us to wild places, as human beings and to interesting acceptances in our own mind of behavior. Oh, yeah. I mean, like,

11:52

well, a lot of people I know are tired of listening to me talk about slavery. So it's like, every year, it's like, give me a topic, and I'll connect it to it somehow. Right. And but it's like, the more of this world that you see, you know,

12:06

it's hard to it's hard to not see it anymore. It's hard. It's hard to pretend it isn't there. And I think what's happening is some people, their eyes sort of get open to it, and they see it for a second and they're like, oh, no, no, no, I can't look there. You know, I don't want to think about where my X Y or Z comes from. You know, it's hard. It's hard to think about it really is it really isn't. And sometimes as a consumer, it's not your choice that that came from slaves. No. Did you realize you know, most of the cacao is picked by slaves. Most of the lithium in the world now is mine. And through one of the artisanal mines Yeah, they're not they're not industrial mines. There are Teasle Oh, That sure sounds nice. Doesn't Yeah, that means it's done by hand at me and it also means they're destroying somewhere beautiful. Oh, yeah. I had with their children. You know, it's a three artesian spring. Right there. Yeah. Isn't Oh, man. Come on gap. And what we don't like you said it is a seedy underbelly. And

13:10

like, we were saying, in our conversation outside the thing that I think most people are not ready to accept in their life. Right? And in their consciousness, Billy is that slavery never stopped. Never stopped. Never stopped worse than it's ever been, right? Worse it mainly

because at least when you're talking in the ancient world, things like that, where slavery was a common practice. Like, there were laws that protected slaves, like Yeah, like they were considered a part of the household, things like that. And most cultures that had slaves and I am not a proponent of slavery, people believe me, I'm just saying that. Like, when you get to Chatel, slavery here in the United States, things like that, it was it was a pretty, it stood out a lot, because that's not the way that slaves were typically treated.

14:08

And, and to know that, yeah, slavery still fully exists in that you were a part of that chain.

14:16

That's a hard nut to swallow, man. That's a hard nut to sway. Just look at our carceral system. I mean, look, how many prisons how many prisoners do we have that are being paid a fair wage for what they're what's going on? Now? They're these people are they're all if they're working, it's generally wage slavery, if the very least but that is slavery. Yeah, that is labor trafficking. And the the numbers are so bad. I mean, I've done so much research on this recently. I have, you know, as you know, we have a knowledge vault on PBJ learning.com. And that knowledge vault includes easy ways for you to access some of these topics. So there we have categories and tags that are really easy to get to. And prison labor is something I highly recommend that you look up at

15:00

Every article that is on there, I sourced from major news outlets and specialty groups that know what the heck it is that they're talking about. So inside of there, you can read everything. It's free, you don't have to register or anything like that to become to become a member to get any of this stuff. But it is absolutely fascinating finding out what is going on in America. So I pull all these articles off of the news. And I get rid of all the ads and all the other junk and it's just brings just brings the stories into our environment, so that all these things are interconnected. So you can easily access the things that are going to be related to it.

15:37

But the the prison slavery in America is just unbelievable the amount of amount of labor trafficking that we're that we're putting people through Starbucks uniforms, McDonald's uniforms, all kinds of things, call centers, etc. You know, if those people are working, they should be paid a living wage.

15:56

And all of the other things that are happening to those people, I mean, they are essentially if you think about it, they're in a company town. You know, you got to pay whatever it costs to use the phone, you got to pay whatever it costs, you know, to get the tablet to be able to look

out, you know, you got to pay what it costs at the you know, it's like, that's just that's not right. Yeah. I mean, it's just not right. And it might as well be a company town. There it is from the San Diego Union Tribune on the frontlines of some of the deadliest fires raging in California, are inmates getting paid \$2 a day.

 16:32

And only up until a few years ago, they were unemployed ineligible to become firefighters when they got out. Yeah, yeah, exactly. And there's also despite their raging experience, helping put out massive forest fires, if you want to dig further into that, you're going to find out that there are prisoners that were kept in prison because they wanted them to keep taking care of the forest fires. And you're like, Hi, how can you do that? That doesn't seem right. Absolutely. And the thing is that all of these things that I'm bringing up are that we're discussing, you can research them yourself. I have them online so that you can easily find them.

 17:10

We are anything but alarmist.

 17:15

If you find something that seems alarmist on our site, it's usually because we put it there so that you would have it as a reference to what's going on in pop culture. And generally, it's even labeled as such. The thing is that in when I started finding out anything about human trafficking, I did not know where to go for information. Yeah, I didn't know what's trust, everything seemed like it was just a giant mess. Some some resources that were up, we're only up for a couple of months or a couple of years, and nobody's ever updated anything. So

 17:48

I'm determined that we're going to change that. Absolutely. And what I love is hearing stories like I did earlier

 17:59

where sheriff's are like I need this to be able to train all of my officers like Ryan and and you know, people people in state legislatures are looking to you to bring this stuff to light. Yeah. So it's fantastic. And I just popped up while you were talking The Philadelphia Inquirer story about the judges. This was like back in 2000, the judges that were actively selling kids into for profit facilities. I saw like it's unbelievable. Again, yeah, it's just another example of this is happening right in front of our eyes. Yep.

 18:39

If you just open them up and look, you're gonna see that this is what's what's really happening everywhere if you're an RSS user, folks like myself, I mean, number one, if you are you should be subscribed to our RSS feed.

 18:54

Got that right, Sam here PBJ learning.com RSS. And that's just it. What I was gonna say is go follow fbi.gov Follow their RSS. Guaranteed you will see at least one human trafficking bust across the country a week. It's crazy. It's crazy. I mean, to the point of like, they have big ones so you can huge ones. There was the one a couple months ago in Atlanta where they like fried 200 Kids, so Okay, so let's let's maybe that's one of them. And maybe it's not but it's that's indicative of a large bus that they do. So they do large bus with large groups of people, they coordinate and they do they do amazing work to put an end to these people and these types of people. I want to caution anyone that is thinking that that's that that's actually helping people. We got to have a realistic conversation. These people are dead, not even a dent. You're right. It's possible that a lot of those people were, you know, sex workers by choice. And that does happen. And they're, you know, there's nothing necessarily wrong. I mean,

 20:00

Sorry, I have my concerns about 200. They're picking victims, including 59 missing kids.

 20:08

Yeah, that's what I'm saying. And that was all good. Next question. That's gonna be August. Yeah. And the question really is what happened to those people? You know, there was no what's now? Well, I mean, I'm on a large number of coalition's and I read constantly things that are sent to our major groups, and we have problems sometimes having like one bed for somebody in a state. Yeah. And like they're talking about how they've got a found 200 victims. I, I don't have the time to do it. Maybe one of these days I will. But I'd like to find out what happened with those victims. Yeah. How many of those, you know, were really sex trafficking, or were they potentially sex trafficking? You know what I'm saying? There's so many questions that need to be answered. Yeah. But it makes a heck of a headline. And then you don't find out what really happened. You know, did those people get help? What services did they get? Did they go back to their trafficker? Were they in situations? You know what I'm saying? Yeah, it's like, this is just the beginning of what should be like a massive like undertaking to find out what happened to those 200 people. And

 21:15

I think that that is some of what's happening right now. I hope Sally,

 21:22

before before we get into trapped and everything else to Appleseed program. Let's talk about trafficking in the headlines in the news right now. Right as there has been some interesting

cranking in the headlines in the news right now. Right as there has been some interesting articles happening. And number one, there was the huge bust of Andrew Tate. Right and and like on human trafficking charges. We'd never heard anything more of going Maxwell. Her I think, I think they sealed her case for 100 years, something like that. I'm not even joking. I really believe that's what really happened. Yeah.

 21:59

But what's interesting is the number of people like like, for instance,

 22:07

Russell Brand right now, right? Going through what he's going through the conversation we were having earlier outside, you know, like, he is he is highly connected to people like the royal family, and they are highly connected to people like Jimmy Seville, who, right? Who for decades, people were saying like he is a pedophile. He is trafficking children, to stars, things like that. Right now, one of the people that is accusing Russell Brand was a teenager when things happened, right. Right now we're looking at the the case of the sound of freedom producer. I just brought up the curious roam group. Hey, folks, if you ever want to just find these things that we talked about ready to hop over to Facebook, follow the curious roam group, and just a really, really search, search the group that really is the place to be all the articles about the sound of freedom. And this goes back to a month or so ago?

 23:14

That that yeah, one of the producers,

 23:19

a pair apparently was involved with an underage trafficking victim.

 23:25

That's not good. That's it's not good. It's not good. Not when the movie is about anti trafficking. And I have floated the concept I have floated the concept. Billy of

 23:39

this is just my conspiratorial mind going well, before we before you say that. I'm gonna say I don't know what this guy did or didn't do you think filing this case went over this. This? I don't have any idea if he did that mean? No, no, no, there should be a whole bunch of a legend hands on this. All right. I mean, I hope he did not do anything, say you know, and I hope that this isn't a smear campaign by somebody else. That's just you know what I'm saying? It's like, and there's so many levels to all these things that it's so difficult to really get to the truth. I

hope that we get to the truth and the truth that this guy is innocent, but who knows? Yeah, you know, I mean, that sucks. That is not good for that show. No, no, it's not good for the movie. It's especially not good for the cause. Yeah, it's not good for the cause he then and makes everybody agree well you with the

 24:32

especially with the fame that the movie was gathering the traction that it was gathering like it outperformed movies like Mission Impossible. Oh, that movie should not have made that much money it should not have should not have especially coming up from an independent Christian studio, right. The end up against movies like that it should like God, Indiana Jones got buried by Batman like

 25:00

You know, so So it's one of those like, for the fact that it hit the rungs that it did. media wise was incredible. And it was doing such great, amazing things for the cause. Right? I believe as far as people saying, Wow, this is a legitimate thing. Route, like I've heard about this, and now there's a movie about it. Wow, wow, like this is a real thing.

 25:27

But then this slamming the brakes on all of that,

 25:32

to me, it's one of those. I don't know, like I said, my conspiratorial brain immediately goes to, well, it immediately makes was all of this made, so that it could come out in public, and so that the cause could be discredited. Oh, dude, there is no doubt that that could have happened because the no doubt I have said on this show since since we were dudes and beer is you can be angry about those, those emails, all all that that you want from the Democratic Party or the pizza gate emails, everything else.

 26:10

Pete the pizza parlor was fake. No worries. Oh, however,

 26:18

there were a whole bunch of other allegations in there about human trafficking, and things like that, that were not addressed. And were never really addressed as like, well, well, that's not real.

26:31

pizza gate is kind of one of those things that you could see is like a limited Hangout, whereas like, a lot of a lot of things around it. Were real enough. But that one thing wasn't. Except that the thing is that, no, they really do order children like pizzas, they do just knives from that location, I assume. Yeah. So it's like your thing, but it makes a thing but the fact that the pizza parlor was part of it, all of a sudden makes all of it sound crazy. Yes. You know what I'm saying? Yes. So it's like so maybe this this guy is put in as an investor so that later they can discredit the entire movement? Yeah, man, anything like that's possible. You know, there's there's games that happen on the way will the the names being named in things like go a Maxwell's case? In in cases? Like, oh, God, who was the other movie producer? There was another one recently that was that was like, huge that went down.

27:29

I can't recall. I can't recall as well.

27:33

Not Weinstein. Yes. Okay. Weinstein. Yes. Yeah, like there. And there were people like, you know, Emanuel Lewis or not a not a manual, Louis, Gary Coleman. People like that. Who raised the alarm on this stuff. years ago. Corey Feldman. Yeah. Like,

27:55

oh, my gosh, if you talk to him, he's in town to him. So all of a sudden, now you're going to be in the crazy where I know what I'm saying. Like, you can't talk to him. He's like going, why can't you talk to somebody and get their story? And why can't Why can't you believe in? That's just it is that there? There have been people that have been sidelined on this topic in Hollywood. And in Upper rungs for a long time. We're like, oh, no, no, no, they're a crazy person. They're a crazy person. Okay. And

28:27

I don't know, things like this. Once again, my conspiratorial mind immediately goes to with all of that hitting the news

28:38

requires more attention to it and more attention to it. More attention to it. People are paying attention and poof, now it's all your crazy, the number of college scientists that we're not even cursorily connected like, deep connected to Jeffrey Epstein.

28:57

11 28:57

Like people who like lead MIT labs, things like that, like right, it was freaky. It was freaky.

29:05

That day was throwing money around. And he wasn't throwing his money around throwing somebody else's money around and it's one of those like, it reaches high it reaches really really high.

29:18

And yeah, you know, pizza gate sounds like a crazy thing. It was really one of the one of the seeds that begat the Q anon movement there really was things like that which is like once again, where where people get caught up is like it's tied with Q anon stuff like that.

29:37

Even though we were talking outside even Jim covveys you'll from the movie is tied in with q&a. He is definitely like that he's definitely tied into Q anon. And here's the thing I'm God bless him because because we live in America, you know, it's yeah, you can write to wake up think any any way you want. Right? He his The thing is that anything hit well

30:00

That's true. I mean, you can, but there there are, there are some limits. And while there are definitely repercussions, right, no doubt, there's definitely repercussions. But I mean, as far as him, I mean, a lot of the things he says are verifiably true, verifiably. True, yeah. And every so often he says something that's a little much. And it's like, okay, that probably would have been nice if you hadn't said that one thing, because it's like, it's too it's too much. Yeah, you know, the Adrenochrome thing is the one that gets me. I mean, I have I have talked and talked and talked to people. And so far I no one I know has been able to prove in any way shape or form that that actually is done and is effective. But the thing is that it doesn't matter if it's effective. It matters if somebody thinks it's effective. Well,

30:53

you know, Grant hard doing all of those things to children. Great. Oh, my gosh, if people think that I am, I've worked at the state hospital, I know what happens when mentally ill people are left to their own data, they will do things and if you have power, and you and you have freedom to do things, because you'll just get away with stuff. So I don't know what people are really doing. I haven't seen it well. So who knows how well it's granted. I want to do a whole Adrenochrome episode. Because there there is that hypothesis out there. And don't get me wrong. I think that there's definitely one guy I want to introduce you to for that there. Okay, okay. He's, I want I would love for you to talk to him. I would love to talk to him. Yeah. We'll talk about that after the ship. Yeah, we will. Um, but the idea that in yes, there there are some

vampiric parts of society. There are some parts of society that I'm not saying that, like anybody's being killed in a satanic ritual to have their Adrenochrome harvested from their adrenal, however,

 32:03

are they being

 32:06

trafficked and tortured in order to possibly draw that blood from them after they've been tortured? When it is heightened with Adrenochrome? And everything in it? That's what I'm saying is whether whether that is a going hypothesis, or whether or not it actually would reverse your aging. Okay, which is I think, the big fantasy, whether or not it did that, it doesn't even matter. Because if they are torturing children, then that just has to stop. Yes, that's all I'm saying. Let's let's let's just conversation. We don't need to go down the crazy part. Let's just stop children for being tortured. Period. How about we start there? Well, I mean, definitely, there's, there's that that old vampiric tradition of the fact of yes, the drinking of the blood is what gives you immortality. This is more of the fact of there is no better Hi.

 33:00

Yeah, you ain't gonna get a better high than off of Adrenochrome and off of somebody else's Adrenochrome

 33:07

is apparently the that's the thing. Super fresh. Yeah, yeah. Yeah. Who knows, ma'am. And

 33:15

once again, even even that could be a placebo for crying out loud. You know what 30% of all drugs are like a placebo effect. Right? So it's like, Wait a minute.

 33:26

Yeah, totally sweet. And whoa, I know. It tastes like Adrenochrome. Who knows what's going on in people's heads, man, if they're doing any, anyway? Well, look, I want to I want to take a couple seconds to be suspicious for a second. Yes, because this topic, it could rapidly make somebody think that I'm like some crazy person. And I'll share with somebody that I wanted to share that. So I worked at the Austin State Hospital for almost a year. And I was there. When we did intake on a young young girl in her mid 20s, who had been locked in a cage her entire life and only used for rituals. And I read all of her paperwork. I was absolutely fascinated by this. I talked to all of the people that did the intake to find out what happened and apparently

she her parents were using her and satanic rituals since she was born. And they kept her in a cage. And this was the first time that she had ever been out of their home. So it doesn't matter to me whether there is a heaven or hell or God or devil it What matters is that people are treating each other like well, they're masters that.

 34:43

That's right, that is people that is evil, and that evil infects people and makes them do it further. Yeah. So whether there's a good or evil thing going on, that's really happening and that behavior is definitely evil. So I have I have a lot of people that are very concerned about that.

 35:00

You know the good side losing to the bad side and the bad side doing certain things? Well stuff is a Cancer man it is it is and once once again even to see how it it has, like it destroys a consciousness. I mean the idea of the sound of freedom situation is a straight or a Boris man like it is the snake biting its own tail. It's crazy. Like

 35:25

it just numbs my mind numbs my mind. And once again, he's not the only one that has some accusation. And no, I'm not the only one in the film production that does this. Here's a couple. And you know, like we were talking about with a question

 35:42

how clean do you have to be like, I mean, like can can a movement be squashed like that by by chopping off people, you know, all the way through? It? Looks like oh, this person got it. salutely by discrediting pete this person spared in a school zone and that person doesn't recycle.

 36:05

These accusations are a bit larger than speeding in schools. I understand I'm but my point is like, where's where is the drugs in a school zone? That could be a deputy one story but but did they go to prison for it and pay their debt to society? You know, there's a million questions for this debt doesn't that social is still bad? What's here? That's very bad. That's bad. torrefied. I'm just saying there's, there is a point at which you kind of gotta go. Are they just digging up something on everybody? Because everybody's got something in a closet? Yeah. Yeah. And like, my knees are bad thing like my wife. I mean,

 36:40

it could be the fact that he got tied up in something like that come to find out later

36:47

that he, he is doing this to help clear his conscience. And that's why he got behind this movie. You know, I mean, I can make up a reason to you know, but it's like,

36:57

once again, there should be a lot of alleged Yeah, all these headlines allege a lot of alleged on this headline, no doubt about it. We cannot we cannot be part of the party is Billy that

37:09

convict from a story? You know, I don't want to do that. We got to hear the facts. That's right. I do. That really is what it's all about staying calm, and in the middle of a big mess, because and that's just it, because this everything? Well, once you start digging into this man, it is it is a hot tater of a mess, is the only way to put it like it is. It's all over the place. It blows my mind. Let's start getting into statistics, things like that, Billy. Okay. So the one of the most quoted statistics is that they believe that human trafficking is \$150 billion a year.

37:51

profitable industry. And so that's money that's being taken out of the out of the pockets of all of the people that are that are being trafficked worldwide. So as far as any real statistics, because this is, it's illegal. And it's covered up and many people don't even know they're being trafficked, or don't even know what trafficking is, because they've been living in it for their entire lives. They don't even know

38:17

how to estimate it. So they're just doing the best guesses they can based on based on the numbers that they can find. So everything can be off wildly, and some of the some of the research that's done

38:29

is limited in scope. It's limited in the amount of money that they had. And sometimes they're sometimes they're they're looking for the things that they're only looking for the things they know, they're going to find. So you know, so the statistics are not that great. But they show that there's over 20 million people in forced marriages, you know, because that's also considered human trafficking if you're somebody benefited somebody. There was a dowry involved. Yeah, that's right.

38:56

And you know, one of the things that's that, another statistic about it is 88% of people that are trafficked report having seen a medical professional while they're being trafficked. Yeah.

39:10

Another another surprising statistic is the

39:16

oh, I always get I was bogged down on on statistics. Oh, I think it's, it's over 60% of people that are being trafficked, knew their trafficker. Yeah, before they were trafficked. And I'm not sure the exact number but somewhere around 40% of people are being trafficked by a family member.

39:39

It's like what is going on? And a lot of that, that it's called familial trafficking or inter familial trafficking or whatever. But it basically means that you are you are being taken advantage of by somebody in your family and that could be for labor. You know, like your family may just decide that you're just never going to get paid for working for your entire life. And that's just how it is.

40:00

Um, you know, work could be fun. Nice. I thought I saw some Hey, that wasn't cut. Yeah, exactly.

40:07

There's some, there's some crazy stuff.

40:10

But

40:12

but there are too many family members that are trafficking their children to pay for their drug habit that came from the oxycontin crisis.

40:26

And so it's just like, I mean, we are our country is, is being hollowed out. By this, it's it is affecting our citizens. Is this a bad thing? Yeah. And, you know, the only the only answer to this is to prevent it. We have to get in front of this. And we have to teach people how to acknowledge that they have vulnerabilities that someone could take advantage of. That's That's it? Yeah. That I think if I could get anything across to somebody, it would be just acknowledge that you have vulnerabilities. Here's some examples. You know, hey, you're broke, you haven't paid your you haven't paid your rent in two months, almost anything looks like a good idea to make money. Yeah. You know, it's like, oh, it's because I'm extra vulnerable, right? So it's like, if you can get people to think about that, like, Oh, I'm on I'm online, and I'm lonely. Wait a minute. Now, why am I clicking on all these these weird ads and things like this? It's like, Dude, you need to acknowledge, recognize and acknowledge that you have vulnerabilities. Yes, yes. And it's like, and that's as a parent, that's one of the things that you want to teach your children. It's like, teach your kids how to acknowledge and recognize that they have vulnerabilities. Yeah, you know, and if you can do that, your program not programming, but you're, you're teaching your kid how to think for themselves in these situations that they're going to encounter for ever, it's gonna happen 24 hours a day on your kids cell phone, they could be bashed by SMS messages, with very nasty links. I am trying to find pardon me for being on my cell phone right now. They know that this is not what I was thinking, wondering what SMS listeners think you were gonna pull out. I got a bad one the other day I was. I was actively looking because you know, I take pictures of him every time I see him. But I'm looking for the last human trafficking sign I saw,

42:20

which was not that long ago, where I was right. I was at a hotel and right saw it in the bathroom, and you're starting to see them more and more where it's like, hey, look out for this. It is shocking to hear the number of

42:35

persons with lived experience that will tell you that they never had anybody tell him how to question than ever even asked them. Are you okay? Yeah. And I'm like, how is that even possible? And they're like, yeah, just for years. I mean, people would just pretend like these things weren't happening right in front of them that they would just ignore it. I was just like, man, and they so they said, when they saw when they see those stickers that just says, Hey, by the way, do you need help? They're like, Oh, my God, it was the first time I've ever thought about anything. I'm like, you talk about something that's effective. It's a sticker. I am trying to remember who it was with a cutie that I just saw there. There. There was, like, almost like a travel Plaza type place. It's all around the country that actually has like a safe room where you go up, right? You go up with your stuff to purchase. And if you're being traffic, you let them know. And they telling anybody where you're at until the cops get there. The only person that's going to be walking in that room as a police officer. And it's like, hell yes. Awesome. That does sound just crazy. It sounds awesome, though. To me. It does sound awesome. They I think they there's a few places that also take babies to some they have like a safe space. They will accept a kid. But yeah, that's great. I mean, that's yeah, those giant travel clauses are dangerous, man. You were just saying that

44:10

it was wanting to train their truckers

44:14

the well, let's see. So right now what's going on that the state of Texas has passed a law saying that if you are gonna get a if you're gonna start doing rideshare to get onto their system, you have to have some human trafficking training. So they just, they just approved a course. And so we're actually we're actually working on that. And we've been talking with

44:37

someone that works with the Department of Transportation who is interested in building some online courses to do you know, possibly inspections and teach people how to inspect vehicles, because apparently, they're their industry is enormous. And the they will also need all this human trafficking training, which we can just throw in there. But the thing is that it's

45:00

I mean, these guys are the eyes and ears of our nation. Yeah, there's the tells me and I'm sure this number is wrong, but it's like these are 9 million truckers in the US and and whoever has happens to be typing. You know if you're if you're online right now tell us the answer how many truckers are in the United States? I'm on Google right now, man. Let me look at here we go. So the other thing, the other interesting thing was he said that there are also a number of independent trucking companies. Right. So he said, How many independent trucking companies do you think there are in America? 3.5 million truckers as of 220 21 3.5. Truckers? 3.5 million. 3.5 million? Yeah. I think the number that he saw, I think he's talking about the number of people that are in the industry. But I'm gonna find out because yeah, the

45:50

only difference is probably just OTRS not people doing local routes. Yeah, cuz, you know, because when we're talking about the the trucking industry, we're talking about everybody. Yeah. Even a local florist that you're even talking about your local UPS guy. Yeah. Anybody? So yeah, I think, well, you think that'd be a great, great thing for somebody to tell us because I'd love to know why. One person says why wouldn't you want your local UPS guy to be able to spot a trafficking victim? Heck, yes. Who's probably answering the door for the UPS guy. Well, yeah, there's there that's there. Is that like, and you can ask people like Chung Kim, folks, you can you can you she is perfectly available online. And I'm in an amazing person. But like nobody questioned. People came to the door, she answered the door. She wasn't like fearful of that. That was just a common thing. You know. And that's just it. That's, that's, I think, what what the misnomer in people's head is, Billy is that we are expecting somebody like, with a with a chain and a dog collar around them and a mask on or something like that. You know, right. We're expecting somebody in a cage. Yeah, that's right. Like, like that young lady that you

worked with? And that's not the case. No. Kids go to rarity. Yeah, like, they go to school. This is a common place thing in their life so much that it is now normalized to them. Yeah, I mean, these children, some of them are trafficked on their way home from school. And that's, that's what they do on their way home from school as they have a neighbor that takes advantage of Eleanor sells them at their house. I mean, there's all kinds of ways that this works out. But it is not like you said it's not a cage that is general that is like so rare. It's unbelievable, but it is, but it does happen. And it's it's not like you're getting potato sack on the street. It's not like somebody's coming up with like snatching the kid in a Van Aken or another male, you they have something on you, they know something about you. You'll do anything to get them to not tell somebody it's I mean, it's typical blackmail. I will give two examples from my life and one of them involves my son.

 48:04

Where NDA we were talking earlier, you know, he plays Minecraft, things like that on his tablet. He's like six, all the parental locks are on things like that.

 48:14

But there was one game that it installed at one point that we installed with him. That nowhere on it, did it say it was cooperative, or community or anything like that. And I mean, the boy like narrates while he plays like, seriously, I'm about to make him a digital avatar and just start recording it and posting it.

 48:38

But I mean, so we thought it was that. And then he answered a question. And he answered another question. Oh, then he was like, Oh, I live in Austin.

 48:50

And I was like, yo, yo, yo, yo, let me see that thing, son. And yeah, it was like a chat. Going on verbal chat, too. Yeah. Wow. Like with my six year old son.

 49:04

This was just before your last appearance on this show. Wow. violation. So it was like, Okay, I'm sorry.

 49:12

No, no, no, no, no, no, I'm not. I'm not. I'm sorry. The kid can't play the game. Yeah, I'm sorry for that, because he was thoroughly enjoying

49:22

why there isn't a parental lock on that. I mean, that just doesn't make sense to me. Oh, no, I'm sure that there is okay. Yeah, it was just the fact of nowhere in the description of the game. Did it say anything about community chat be a part of a team ripping like that? Yeah, you would have steered away, we would have would have never been installed. You know, like, all parental locks on his tablet like so.

49:47

There was that. And then there was a situation with my niece many years ago, like 2012

49:54

where I was on social media. She'd had a couple of friends. She had one friend commit suicide one

50:00

die in a car accident oh my god from drunk driving another one attempt suicide. It was a it was a bad year for her as like her sophomore year in high school, and she posted something

50:13

on social media about being down or something like that about missing her friend.

50:18

And this dude popped up

50:22

whose comment just didn't didn't seem right. Like, he was about my age, something like that. And it was just very, like, as someone who's been a youth minister, or someone who's dealt with parents, things like that, at the time, I wasn't a parent.

50:40

But still, my alarm went off of like,

50:44

parents don't talk to kids like this in a moment like that. Right? Like, if spider sense went off? Yeah. And I was like, Hey, Randy, like you should go check out your your daughter's Facebook profile. Like, there's this dude on there that is, is really asking her to like, hey, yeah, you know, message me feel free to give me a call on Facebook Messenger if you want, like we can talk and that kind of stuff. And it's like, I don't know any parent that anybody trying to get you off of them off of that platform. That is that's a dead giveaway. Yeah. So I sent it to my brother, and he started digging. And sure enough, this dude was like 2829 years old, didn't have any friends that were over the age of 20. They were all in the 16 to 19 range. The most of them ladies.

51:39

Things like that. And he was like, Hey, bud, and send them a screenshot. It was like a sea you

51:46

ride. You need to let this fish go. Like, good job. I'm telling you right now. I will contact the authorities. Then they would never saw the dude again. Let's go i bet but it was one of those ladies, that was my first experience where it was like, wow, it happens just that fast. Just that fast. And they are they it is a sociopathic mentality. I helped a

52:16

I helped a young woman put up her LinkedIn profile. And like within moments of her putting her picture up there, she was getting hit on by some dude who was clearly her elder. Yeah. And I had to write the guy myself and just be like, Dude, what are you thinking? You know, and he backed off. But I was like, that was just so weird. Well, it wasn't like one of those spammy or scam faces. You know, it was like, this is like a real person. I was like, creepy. Yeah. Yeah. All the time, all the time. And that's just it. Like,

52:52

it's pervasive, it's pervasive, and you can't keep a track of all of it. You can't No, I mean, there's, I mean, I wish I had, I don't have all the stats, like right off the top of my head. But the the amount of nudes and requests for nudes, that's happening for children, and for people that they don't even know anything about, and the AMA even say that they think that are adults. Is is crazy. It's like some myths weigh over 50% You know that these kids are getting these things constantly. Yeah. And you're just like, I mean, what the hell? Yeah. Yeah. And that's just it, like, you had your own experience with your children, which is what led you to build trapped? Yeah, let's get into the software, let's get into helping build empathy through VR, because not many, not many people might be familiar with that concept, or how VR can actually help trigger the emotive centers of the brain. Yeah, you're right about that, you know, I actually, I actually got into this field, because, you know, we had a personal experiences, you know, as you were saying, We,

54:06

I was working on a project for a friend of mine, and we had a landline going to the house. And so he would call the landline and I would get the phone to get given to me. And sometimes he called the cell phone, but one time, so my boss

54:23

was calling me, but sometimes he talked to the kids because he had known us, you know, known them for a long time. And

54:31

turned out that this guy was a sex predator. And we blocked him and we did everything we could to try to teach the kid I mean, I don't want to go into all the details. It's pretty, it's not good. But I realized that the thing that that was happening was it was caught. What was happening was he was grooming My children and what that is, is a slow psychological,

54:55

you know, turn towards normalcy of talking about sex and then eventually

55:00

possibly using that person, you know, sexually or even all the way up to and including human trafficking. So the, the whole thing was that

55:11

I didn't understand how to teach the kids anything about what grooming was and how that felt. And we looked at a bunch of movies and read some books and tried the best we could and did some role playing and things like that. But there really wasn't a way to educate people about grooming. And so when I got into working in VR, as you said, VR has the ability to help you be in somebody else's shoes. So you can experience something from their perspective, which gives you the ability to see the world from their viewpoint. Yeah, and as I started learning more about grooming, and how, how the psychology works, and what trauma bonding was all about, and how people's vulnerabilities are being taken advantage of, as I as I was doing

55:53

interviews with people all across the United States, it turns out that when somebody is trauma bonded to a controller, or trafficker, they see the world differently than we do. So when you see a cell phone, you think, Oh, that cell phone means go get some help. To them that self, that cell phone represents a ball and chain because they have to keep that cell phone with them all the

time. Because if their trafficker texts them, they have to be able to text them immediately backwards or back back to them. They have to take pictures of themselves to post online so that they're doing their own. They're they're doing all their own advertising on their social media. It is, it is ridiculous how different the world looks to a trafficking victim, versus what it looks like to us. In fact, there's even a term for it, they call they say that they're in the game or the life, and we're in the square world. So we're all squares. And really, what's happening is when they see the police, they won't go ask for help. They won't they they will not go out the front door and you're thinking, why don't you go out the front door, and it's like, oh, this because this guy's gonna beat me. You know. And so it's like, what we do in this VR experience to try to try to get somebody to actually have an emotional experience with a with a situation is we provide, we provide them, this young woman, we explained, we provide an opportunity to spend time with this young woman named Lisa, who she meets a boy online, all she thinks it's a boy, but really, it's a it's a professional predator who is out to out to trafficker and he recognizes all of her vulnerabilities that she's busy posting online, I'm, you know, my parents are divorced, my mom's never home, I don't get any attention. Nobody loves me, you know, et cetera. Now, all these things that are basically saying, Hey, I just need some attention, and I'll do anything you want, then that's exactly what winds up happening. This guy comes in, convinces her that he loves him, tricks her into sneaking out with him, and then eventually tricks her into use, it ends up selling herself for sex, and all the while psychologically convincing her that he loves her, and that she's doing all of that for him to help him to help them and their relationship, which is completely psychotic. But it is it is what happens to people. And so this experience takes about 20 minutes, and then you once you understand and you have this connection to the topic, you are actually more interested in trying to do something and learn something about the topic. So that's what we're, we're, we're proud to say that we've been we've been doing this for seven years now six years suddenly goes six years. And we've, and we're in 10 states now we are fine, we finally hit our 10th state this month. That's awesome. So many, like I've said so many times I've loved watching the journey of this technology watching the journey of this model of education because once again, and I've sat through educated like I told you about the veritone ver tus training, things like that, that happened for the Catholic Church, whenever you're a volunteer, that kind of stuff. I've sat through numerous trainings about ethics with kids, things like that.

 59:03

Never really a topic that was broached never really suddenly was brought up whenever I was being trained to be in a classroom with children, right? Things like that. It was I mean, we learn to spot signs of somebody who might be emotionally abused or something like that, but not not on this scale. Yeah, you know, we, so my wife, she has, she has a bad history of child abuse. And so her from her perspective, she's like, when she was a kid, she felt like she never saw anything that said anything about child abuse. It didn't feel like there were big posters everywhere saying anything about that. But eventually there were some and now you now you see them a little more often. And it's kind of how it feels like with human trafficking. It's like, that wasn't even on the radar at all till 22 failed the year 2000 When they put it into law. So when all of a sudden the term human trafficking became the word that people use because of the TVPA. So it's like yeah, when we were getting

 1:00:00

It's nobody even thought about calling it this stuff. I mean, it would they would have guessed

they would have been going out on a limb and calling it slavery. Yeah, right. Yeah. If they can even convince somebody it's real, or or just abduction? Yeah, you know, right, which is what most of it fell under legally was abduction, that kind of stuff, their kidnapping, you know,

1:00:24

the labor trafficking, it's like, what? What was what was that considered before? Yeah, I should probably know the answer to that question. I'm gonna go find out. Well, you know, once again, even though I sat through trainings and watch videos and things like that,

1:00:38

this is a thick, meaty topic, and not a comfortable one to talk about. It's not like, it's not like, here's what you do, here's what you don't do. Like most of the trainings that you go to like that, right.

1:00:54

Even even the the topic itself is a good 1520 minutes before you can even get into it, just introducing the idea of the topic. So trying to get somebody in 20 minutes to a understand what trafficking is, right? Exactly what trafficking is. And to be able to give them that empathetic experience, where it's like, wow, I want to know more.

1:01:23

Yeah, that because that's the main thing is not just walking away with well, you know, wow, that's a thing that there's nothing I can do about it. The to have them walking away and wanting to know more wanting to go to training, we are what's incredible. We've been we've been incredibly blessed to be at a large number of public events where we get to train the public, and we have families come up and the parents and the kid will all go through the VR experience. And

1:01:55

like we had one mom would come, she came through and she She said, Yeah, I'm interested to learn more about this topic. I don't really know anything about it.

1:02:04

You know, I don't think this could possibly be happening to us. We're like, that's cool. You know. And so she puts the headset on and she gets she gets, she gets halfway through it. And she is just crying and crying. And she's like, she's like, this is happening in my house. And I'm like, what? So she runs away. Actually, she didn't say this happening in her house. She ran away, crying, and came back and said, I want to I want to finish this thing. And we're like, what's

going on? She says, Well, I didn't think this could possibly have anything to do with me. But I realized that my daughter is sneaking out at night. And she's hanging out with people that I don't know who they are. And I didn't realize that it could potentially be this bad. Yeah, you know, and she was like, she's like, I'm not spending enough time with my daughter, I, I've got three jobs, I need to quit one of my jobs and get to know who my daughter is. Yeah. And then she finished, she went through the rest of the experience, had to stop again, because she had she got too emotional. But she went through a third time she came back and finished the whole thing. And she came back the next year and told us that she had made those changes in her life. Wow. Incredible. They may even if it's one person that had helped, yeah, you know, even if it's just that one person, I feel like we're doing the right thing here. Well, let's get into your seed program a little bit because that's the latest thing. And that is such an incredible success. I've loved seeing you travel across the country. Yep. Going to all of these licensees and being able to put a box in their hands. Yeah, it's, it's, it's really interesting, because the topic is, as my friend Dallas Snell says, radioactive, you know, people are just not interested in it. But the end the technology is also a little bit scary to people because they don't know what virtual reality is. So they they're a little nervous about it. But once someone tries this, they see that this has enormous benefits. Because you're getting 20 minutes nonstop to spend with us with a person with lived experience. I mean, it's all of course, it's a it's a story, but it's based on real events and real situations. But they're getting to be like directly interacting with them. And even if it's nothing else, they are in a completely enclosed environment and there are no physical distractions from the mirror No, no, no little squirrels running in front of them. They're not thinking about their phone getting a text you have 20 completely immersive minutes with this, this learner and they absorb this complicated material at their own pace. That's what's epic. I never thought about that until I until we had done this and then I started taking a couple of extra courses, some online classes. I was like, oh, I need to we need to learn how to make an online course I started experimenting with them and I'm like, it's like they just show video after video. Just horrible.

1:05:00

fact after horrible fact after horrible fact. And just like, oh my gosh, oh, here's a voiceover here's a voiceover PowerPoint. But but it's but it's too much. Yeah, it's coming at you and it's in. It's too much. And the thing is there and this. This is just from my time as a teacher, Billy, right?

1:05:19

There are auditory learners. There's visual learners, there's tactile learners, right. And they all they all cross over, you know, I am an auditory tactile learner. If I can, like I can be doing something and hear other things and absorb that information. Yep. But for me, it's the technical part. If I can touch it, and do it, right, I'll learn it three times faster. There are people out there who learn faster from a book. And from diagrams, and from a PowerPoint, the end absorb the information faster that way? Yeah, that's right. And yeah, you know, most people don't realize, if you go to a good retreat, if you go to a go to a good training event, you're going to get a break every 25 minutes. Because that's basically the chunk lit that your brain operates in before it needs to shift gears. Yeah, see that before you need to switch activities. Okay, everybody, let's break up into group. And let's talk about that for 10 minutes. And then you come back and you decompress that and then you take a break, and then you come back and

you have an activity that reinforces what you just talked about, right? Things like that, so that you are activating everybody's learning center. Everybody's getting to learn. And the problem is, there's a huge part

1:06:44

that you ain't gonna learn from any PowerPoint, the only way you're going to learn it, is this, the only way you're going to learn it is being there or having the experience of talking with experience, right? Yeah, that's it. Yeah. And one of the things that that I launched on this whole, I've taken probably 200 courses online and in person and webinars and seminars and events and conferences and individual conversations with people. And almost without fail, the best presentations start with a way to get people to care about the topic, whether it's a video or if a series of special presentations, or a person with lived experience telling you their story, whatever it is, you have to have that emotional connection, and when that emotional connection is made, genuinely, people learn, at least that's been my experience. And that's what I've seen at conferences. So it's like, this gives you the best opportunity, I think, to have an emotional connection. And it's with someone that's not even real. Well, you know what I'm saying? It's like, you're not gonna you're not you're not, you're not pulling their energy out. And they're not having to Yeah, wear themselves out day after day. Absolutely their same story over and over and over again, you know, well, yeah, yeah. Which can be traumatic in and of itself, that it doesn't help them. But it's still traumatic to relive it every time that you relive it. And understanding that, but also the fact that once again, having seen this from the days of you needing three four tripods for cameras, track people, and the first five minutes of an experience being here's how you work the device, it's no longer than right? That's right. It's no longer Oh, how do I interact? How do I touch an object, you you have now gotten it to the point of, you look at the object and it tells you the story. It's it's now to the point of just being side loaded on a device, there's no more like, hey, how do I how do I get that? How do I set up a VR system? How do I do all of that to be able to do it, it's unbelievable how far technology has come. And now you know, we you and I've talked about this, they now the quest one is actually that when people break their headsets or the handsets, they don't replace them. So now I can get those in an incredibly reasonable price to make it so that it's so much more affordable for everyone to be able to get these things. So when we do what we do is we sell our software license to people. So we have three different tiers. We have a \$5,000 tier if you're a small or if you're a public school or a small nonprofit. We charge 10,000 a year if you are a larger nonprofit or community college, and if you are a job training or if you are

1:09:36

corporate, if you have Jaico you have a corporation or do job training or your university is 20,000 a year and all of those come with support all of those come with discounts on new modules. They come with upgrades they come with

1:09:49

advancements to the next hardware said if we decide if we move to another hardware set, so you're you're not buying something that's going to going to expire. You're getting something that has support

1:10:00

Yeah, yeah, precisely, not only do we have support, but we also have, we have

1:10:06

licensees in 10 different states and all those licensees have ideas about how they use, how they use the products. We provide the VR,

1:10:15

VR software, we help you get the headsets, and then we have online courses as well. It's all of these things, there are packages to make it so that it's easy for you to train your community. I really don't know how to make it any easier to be able to provide this level of training. I mean, like having a having a person with lived experience, you know, in the room with you constantly, you just turn on and you're like, Look, let me let me introduce you to Lisa. I mean, that's unbelievable. I mean, I, I thought that, you know that \$5,000 was a was a lot to charge until I started looking at how much the people will charge to go speak for 45 minutes and not even let you film them. Yeah, it's crazy. I mean, people are paying up to \$10,000. And we're providing a resource that they can use forever. Yeah, you know, yeah, Precisely, precisely. In the courses, the yeller dreams, train your train your students train your parents train, you know, it's fantastic. It's, it's been amazing to a sideline witness this journey of yours of, of just envisioning a product building a product that does something is amazing. And visionary is this really weird, we're seeing it develop to the point that it is now to do, there's so many exciting things going on. And I really don't like to

1:11:34

tell people things that are that are not going to come true. But we've been working with Purdue University for a year now. And we are starting to see some real fruit from that effort. We are working with their game design students on some new products, and I can't, I can't get any of the details out about them. But whether or not they get finished, whether or not they are perfect whether or not they get released as finished products. It really doesn't matter because I'm getting a chance to help these kids understand this topic better while they're making game game products. Yeah, and um, man. Yeah, the open source design thing that you've done. It's, it's so beautiful. Yeah, I don't work with Hoft. No, I do not. You don't? You know them, right. No, I do. Know I get you in touch with my, my Andreassen. Okay, let's do it. She's She's great. I interviewed them on.

1:12:32

On talking sound years ago. Okay, but Hoft game Institute here in town, sweet, great. Oh, yeah, this, we're actually looking for a, we're looking for a group that would be good to be a licensee, they might be or anybody really, that's out there. If you're a group that's interested in our VR product, and you think I will train with this, call me find me get on reef cares.org and find me,

because I am not going to let cash be the problem to make this happen for you. That's just not, that's not going to be the problem. If you're interested in this, show us that you're interested, and we will find a way to get the money together to make this happen.

1:13:20

You know, we were We were so lucky to have so many people that are out there that are using this we have. We're working with one Native American group, as a licensee and a couple of other ones as future licensees. And we want to be able to build custom experiences for them. We need to build something that is culturally relevant. It's yeah, it takes into account their history, their heritage, their religion, their background, their heroes, their, you know, their, their belief systems, because they're all different. And they're different than ours. And that's all fine. But if our if we can make these VR experiences match their experiences, they will have a much, much greater impact. Absolutely. And I've spoken to people that are doing a lot of doing a lot of work on the reservations. And what they say is that there is a lot of illiteracy on on these people's land. And the parents are not even embarrassed by it. And the kids are okay with it, too. And it's obviously it's it's that's an embarrassment for any nation to have their children not be interested in having any literacy. But the people that are trying to stop are trying to give people information about Human Trafficking Prevention. Their stuff is in writing. Yeah. And so they're like, here's all the things you need to look out for. And this kids are like, I can't even read this. And I'm like, Oh my gosh, how are we failing these children? You know what I'm saying? Yeah, it's like, because at least with this, yes, there's a visual prompt on screen, but it's also telling you the story. Yeah, that's right. You're gonna hear the story if you can understand No, I didn't have the audio playing. But there

1:15:00

As audio Yeah, it's not just your visuals.

1:15:04

But yeah, that's, that's the thing about it is that, you know, we we need to be able to connect with people in the most visceral way possible. And if we can tell a story that resonates with them that's going to make that's, that's relevant to where they are to, we're going to have a better chance now, I thought there would be, you know, some pushback from these Native American groups, because, you know, this is not about a Native American kid. And they're like, look, we are trying everything we can to stop our missing and murdered indigenous women from continuing to be disappeared. This is a there is a tragedy epidemic. It is it's horrifying. Yeah. Yeah, it is. So bad people are not even being reported to the, I mean, like, I don't even want, the details are just horrendous. And so they, they're in such a state that they're like, look, this, this program works. You know, we need something that teaches people the basics. Absolutely. And that's what that's what this does in spades. So I feel good about working with them with what we have now. But I want to make those custom things. And, you know, it's,

1:16:15

it takes a while for people to understand what this is and see the benefit And then it'll take

it takes a while for people to understand what this is and see the benefit. And then it'll take time. And eventually those people are going to want those products, and they're going to see the benefit of them. Yeah, you know, but, you know, it's not the same thing as just being able to hire you know, a lady for \$20 to come in and to do a slideshow that because you trust her, it's like, no, this is like we put significant work into this to make sure that it's right, we update this, we're actually in the process of updating the script right now, based on feedback from some of our licensees. So it's like this is a it's a living product. This is not a, you know, fire and forget kind of thing. And we have a labor trafficking one that we're doing right now to Yeah, and I'm really excited about. So yeah, I can't, I cannot wait to show this to you. It's awesome. I'm hoping maybe some of those Purdue kids can help me with I'm so entirely excited for everything on the horizon for you guys. It's been once again, great to sideline watch this thing. Well, you know, Chris, I want to say that it is I want to give you this apple seed box and headset, and you can keep it forever, thank you. Or you can take it around and take it show it to everybody or take it to your kids school, or just have it sitting on thing because you have done so much for us. And you have been such a huge inspiration. The truth is that and you know that there was a really dark time when COVID happened. And I was like, What the hell is going on? I don't know what I'm gonna do.

1:17:40

Best? I think I Yeah, but I didn't acknowledge it as much you fought through and you came out on top? I don't think without I don't think without COVID You would have you would have had any of the time to work with David deeds in the way that you did with PBJ learning to have your I love this to the point that it is that that all was rooted in COVID time, my man every bit of it. Yes. I just as a friend and watching you go through this, like, much like myself where we had tight like, we didn't do video, we didn't do things on the scale. But our COVID COVID gave me the time to be like, Okay, well, I've been wanting to do this. How do I do it? I got nothing but time to figure it out. Now, you know, I'll tell you one of the one of the things about COVID That that I learned was, there's a lot of things that I thought I was going to do if I had the time. I just realized I was like, You know what, I've just realized that that project is never going to get completed. I'm just I'm not interested in it. And so then I've been putting my time into the things I'm actually interested in in look at the fruit of that time. I love that time. I learned how to make music videos because I wanted to make a music video out of my band. And so I learned premiere and I spent a lot of time in Premiere. Yes, you did. And then that that resulted in oh my gosh, I think I could make some actually I think I can entertainment. Yeah. And I think I could make an online course yeah, I think I can do it. Yeah. So and that's what's great is to see you guys produce all of this yourself to see you. It's just hand spin the dream. It's beautiful. And it's amazing. And it's such a great mission. I'm glad to be able to help in the ways that I can help things like that. How can people help? How can they sponsor an apple seed for their school?

1:19:30

How can they if they're a PTA member, how can they you know get a get a license for the district or for their schools something like I love it. Those are those people so the so the first thing is if you are interested in our VR product, and or our online course contact me, Billy at PBJ learning.com or Billy at reef cares at org My phone number is 512-521-8874

1:20:00

At reef cares.org PBJ learning.com.

1:20:04

If you type my name into the internet, if you type in virtual reality, human trafficking, you will, you will find us. But reach out, I will find a way to help you no matter what it is. So let's start there. But let's get let's get more serious. The first thing to do if you're interested in our VR program is go to reef cares.org. And I want you to take a look at the videos on the front page. So on the home thing where you're looking, so just go, what I want you to just go to the homepage and then just start watching the videos from the top down. And when you get down down to the bottom, I want you to click JOIN OUR Appleseed program and learn how to do it. And inside of there, you're going to find out all of the things that you're going to get, you're going to find out that you're going to get priority support, you're going to get upgrades, you're going to get language upgrades, you're going to get additional VR headset support, whenever it comes out. You're going to get discounts on new modules, you're going to become a member of a large online community of users, we everybody that's using the knowledge vault everybody that's up on provincia occation live show we do every every Thursday night we do prevention cohort live, live video, and that video is usually shared with everybody. So you can actually see special inside behind the behind the scenes content, we answer questions from our licensees. Sometimes we spend time with licensees I go through our online course. Basically, I tried to break down all of these tools so that you as a licensee will have the absolute best service that there is. So yeah, reef cares.org is the place to go take a look, the prices are on there. If you have any questions contact me I am available, available available and I am not going to let cost or any anything that you think is a push back. Whatever you think it is, I'm going to try to help you get around it. Yep, I will send you a box and you will have the chance to and if you can't afford an apple seed you feel free to you feel free to contact curious roam. We'll make sure to sponsor one for you.

1:22:11

I listen to that. You can't beat that. Do you see what I'm saying? I am all about getting this technology into people's hands and being able to

1:22:22

try to try to help people understand that this this is not a problem in India. This is not a problem in Africa. This is not a problem in the pan asian countries. It is don't get me wrong, right. We comprise 5% of the world's human trafficking. Right here, right here. 5% of it happens in your backyard. It happens at your kids school. It happens at your church every Sunday. It is absolutely crazy. How many people are being

1:22:58

cyber bullied and extorted and it's just unbelievable. And I think I think when people start seeing just what's going on with that, how dangerous it is to leave their kids online

unsupervised. I think if people once people start waking up to that kind of stuff, they're gonna they're gonna see they need to get educated. I mean, we have we have an online course that we created. And I really see that as like the first aid for anybody that has anybody that goes on the internet, you need to take this first aid course, which is basically how to acknowledge your own vulnerabilities. Yeah, what I would call it Yeah, you know, it's no, but it covers everything you need to know about human trafficking from the definition to proper responses. But along the way, what you're going to learn is how to keep yourself safe abs in every circumstance. Absolutely. Billy, thank you so much as always, for your time, buddy, you gotta love having you here. And I love it to love love talking about this topic, because it is it's a passion topic. For me. It's one that like, when I found you, and started looking into this, right, it just

 1:24:01

it destroyed me inside to see how prevalent it is. And once again, once I started following the bloggers and seeing it, like every week, yeah.

 1:24:16

That's when it was like wow, wow. Wow. And it just gets uglier and uglier. Yeah, you know, I mean, I, I

 1:24:25

when I go to conferences, a lot of people need to tell me their stories because they know I will believe them.

 1:24:32

And boy, yeah, man, vicarious trauma, dude, there's scary stuff. I have one. I have one that is still there. There have been two interviews.

 1:24:45

One that hit the trashcan. will never ever, ever, ever, ever. I will never ever because of the bullying that happen to somebody live at a show. So I will never air that person's message Gosh, ever.

 1:24:59

Sorry.

 1:25:00

Sorry, not sorry.

1:25:04

At six, but there is one

1:25:07

that I've still got a couple people looking at from a friend of ours

1:25:14

where they were trafficked by somebody pretty high up by their claims. It's an incredible interview. I've still got it. And I'm still vetting it. There's they're very good person. Because if I put it out there, oh, it's a it's a huge taser. They won. Like, like, like a 45th degree.

1:25:40

Tater.

1:25:41

It's huge. I don't know what level of Devo I have to have to have that kind of a tater. But it's

1:25:47

and and yeah,

1:25:50

it shows just how high up the stuff goes.

1:25:54

Is who is accused, there are people that are perverts at a certain percentage of the population. And those people are rich. Yeah, man powerful. And that's just how it is. And so most of them are really good. And some people get caught. Yep. Man, some people have already been caught, but other people are holding it over their heads so that they can expose it whenever they want to. That's right. It's crazy. The amount of stuff that's going on out there. Yeah, Billy, thanks as always, but you got it while you are online, checking out everything from radical empty Education Foundation while you were checking out all the amazing work from PBJ

learning everybody makes sure to stop on by curious roam curious. roam.com is where you can find all the episodes that is where you can like follow subscribe, all that kind of good stuff. Stay tuned through these commercial breaks. We will be right back with our good friend Mike tuba from five by five news. We will be discussing the first UFO UAP report from the new NASA independent study group. What the actual implications of it are because believe it or not community. There's some great stuff that came out of this. I know a bunch of people are Pooh poohing, but we will we will get into the importance of what this first findings mean, as well as some of the the hubbub going on with Jaime Hassan and the the the possible literal grave robbing that He is admitted to by just presenting these Peruvian mummies that were taken out of the country without the country ever knowing it. And you're also you're also going to cover what we didn't get to see because of all that stuff. Exactly. That's right. We'll be getting into that and so much more with our good friend Mike turbo right after this, folks. Well, hello, everybody and welcome back from that commercial break. Thank you so much to all of our sponsors, especially web works wireless, they're your source for credit free, unlimited, no throttling internet. We put out tons of content this last month, and all of it was streamed to our website through web works wireless. So stop on by check them out, folks, web works. wireless.com is the website. While you are online, checking out the website. You can also of course, go to YouTube and follow our good guests for this segment. Mr. Mike turbo five by five news. You can also stop by and check out the curious realm. We have tons of new playlists or new playlists that we'll be playing from tonight is the UFO UAP and declassified government panels playlist. Tons of stuff on there, including like the all of the house hearings on UFOs. The Coronavirus select committees the origin probe that happened the hush money probe about the origin of Coronavirus that happened all kinds of things. So stop on by and subscribe to the curious realm on YouTube folks. You can get the latest greatest we will be of course playing tonight from the amazing

1:29:13

I say amazing it was not it was not huge. It was not groundbreaking folks, it was it was a press conference to say we have released our first study and we do of course have that study that that study is right here on screen. The NASA unidentified anomalous phenomena Independent Study Team report

1:29:37

there's all the panelists everything Welcome back to the show. Mike turbo. How are you doing my friend?

1:29:44

I'm doing excellent. Good to find them. You buddy.

1:29:50

I was talking I was like, I'm sure you just don't hear me because that new sign came up. He says are you trying to talk? Yes, yes, I am.

 1:30:00

Yeah, I'm doing good. I'm doing good. Doing great. But always glad to have you on to discuss these things. You of course are right down the road from NASA right there in Florida.

 1:30:14

Yes, sir.

 1:30:16

The panel that happened the other day, the I guess the the heat, the public announcement that happened a lot of people seem to be very disappointed and very crestfallen. I don't know what they expected.

 1:30:32

Yeah, from a group of liberal scientists.

 1:30:38

It should it should have been less objective thought process to get into to go. Okay, I wonder what we're gonna get out of this from a bunch of scientists, as opposed from say, the UAP Task Force, which I had more hopes on them. Yeah. As far as anything was concerned, but then when it came out, remember that, you know, one out of 144? And everybody's just kind of going on? No, come on, you know, where it's like, We're rooting for a team, and we're in the days the team is ready to come out and play. It's like, oh, no, no, please. We want answers. We want

 1:31:13

to know what's going on. Something's happening in our skies. I, as skeptical as I am, I have to admit, there are things that are going on, that can't be explained. Yeah. But everything, everything can be explained. It's just do we have the technology to figure out what is happening. And if we're being visited by

 1:31:35

what would be technologically advanced by, say, 100 years or a million years or 1000 years, or however many years? And we may not have the technology to detect these things, but we're able to detect something's going on right now. So if we are, we need to know what it is and how

it affects us. And yeah, there's a national security aspect to it. But yeah, if they want to become cautious, they could just do it.

 1:31:59

Dr. Michael masters says, I mean, the whole, the whole concept behind the

 1:32:05

nonhuman intelligence is the fact of, hey, it could be a probe that we've sent back from the future. You know, it could be a probe from an adjunct

 1:32:18

from another bubble inside of the tub, tub of suds, that is the universe, you know, it could just be a personal dimension that's reaching out. Who knows there's so many No, and to keep saying alien, is to like keep saying Kleenex. You know, yeah. Charmin there's 100 different versions of toilet paper out there. You know, yeah, yeah.

 1:32:47

The the bigger aspect, I think that, in short, I think we're that a lot of it comes from is the moment someone airs, he's the whole reason why they got rid of the term UFOs pretty much is because you hear UFO, you are most people, myself included, I get it automatically flip towards the extraterrestrial version of it, so to speak.

 1:33:09

But in literal terms, on the identified flying object was literally that identify flying objects objects flying? We don't know what it is, yes, there's a category. And UAP is now a little bit more broad, I guess, you know, a broader paintbrush for that. Well, it's the same thing.

 1:33:31

That was addressed by a BBC reporter, the fact of you know, just because you've painted this under the banner of UAP. You know, most people wouldn't think UFO

 1:33:42

despite what you think, and now, the importance of doing it that way, like you're saying, Mike, and like, like NASA is saying she's saying that you aren't dropping the stigma by saying that to the general public. No, you are not to sciences. A whole Oh, hell yes. You are.

 1:34:05  
Yeah.

 1:34:08  
You are talking phenomena. And when you talk about phenomena that is quite literally the purview of science. That is a hold on. I'm going to reach here behind me. I'm going to disappear just for a second, folks. But I'm going to grab this compendium of books that I got it started at MUFON I've gotten two more sense.

 1:34:31  
But here they are.

 1:34:37  
These are actual scientific reference books, Michael like volume, a one E one G one we're talking strange phenomena a source of bulk of unusual and natural phenomena, scavenge planet a source book of unusual geologic facts. A Source Book of ash curious

 1:35:00  
astronomic observations. And I mean, think things in this going back to like the 1700s, like cases of ball lightning that were written about stuff like that. So if you were doing a study into a phenomenon like, this shows the fact

 1:35:18  
that looking at phenomena is quite literally the job of science like these are straight up, office scientific bookshelf.

 1:35:30  
To

 1:35:32  
do your study on, you know, so Yeah, whenever whenever you change that definition, Miss reporter, lady from BBC, You're darn tootin. In the realm of science, it makes a big difference, because now we are talking about something willy nilly, we're talking about exactly what the

job of Sciences, which is to figure out a phenomena.

1:35:55

Right. And that is, they're going to use many methods that are employed throughout science that we all know to expect is can you know, repeatable things, you know, what have you but the thing about UAP UFOs, the thing about them is they don't happen in areas necessarily, at a specific date or a certain time. And we don't have a real really good way of studying them. Because it's such a fleeting event.

1:36:27

You know, it's like to happen chance of, of catching something on film is very low. But with the number of cameras that are now out there, I mean, we've got more phones than we have people

1:36:41

that know where to point the camera. And when. Yeah, exactly. And a lot people say, Well, yes, everyone has a cell phone, he has a really good camera. Yeah, but it's still not made to do what it is we're trying to do. But we do have devices that I think should be utilized in ways to help figure this out.

1:37:06

In you, and I kind of know what those devices are, but most of the people listening know what those devices are. And if we get that intelligence community

1:37:16

into that mindset of yet, you guys want to prove this or disprove this, then let's utilize resources that we had that are not necessarily working on. We're not at war with anyone at the moment that I'm aware of.

1:37:32

It's first time a long time. But

1:37:35

the CLI some of those resources, if you guys get it, there's discs that they put in the desert, that they use to

1:37:43

kill calibrate satellites.

1:37:46

While you're while you sit there doing all your calibration stuff, why don't you sit there and point at some of these things that MUFON has a a live reporting ability, you know, and they have some way to tap into that, that would be kind of cool. I would like to do an effort where we go back through all of the dates and times those sightings and match those up with any satellite photographs, that may have been taken at the same time to see if there's some anomalous object in that area. Well, I think that, that that was the big discussion during the during the last conversation we had whenever there was the or not the last, the last was grush talking about the whistleblower panel, but before that was the the NASA panel

1:38:35

that was with arrow. And that's exactly it had an arrow said was, hey, you know, there's a lot of sensitive things that I have access to, but I can't pull in them in America.

1:38:48

But if we know that something flew over Poughkeepsie at this time, hey, Noah, if you have satellites that can see things into this range of the infrared, ultraviolet, get at us.

1:39:02

Work with us, let's use the civilian instrumentations that are available and out there to help really start peeling back the layers of this onion to to figure out what's going on. And that's that's exactly what NASA said numerous times during during this press conference and live stream was the anchor.

1:39:25

Oh, yeah, yeah. And that's just it was one of the points that one of the head scientists made was that, you know, NASA, NASA lives off of transparency. I'm sorry, folks. might know, I know. You may not think that. I know. You may think that. People have been hiding things for generations at NASA, things like that. I'm not saying that there ain't some crazy stuff that's gone on. However, however,

1:39:55

what this scientist is saying is absolutely true. Like if you are studying

1:40:00

lunar material, contact NASA, they'll get you a sample

1:40:05

ya know? Or you can buy one, you can buy one? Oh, yeah, no, I've got I've got a piece of lunar rock that I've purchased collection, you know, like, absolutely. And that's just it. And that's what they're saying is that we make everything that we do public. All of our research is public all of their research, because they are a.gov, because we pay them. All of their research is public, just so you know, artists like this image of sprites that you see shooting up in the sky and stuff here, hey, if you want to use that for an album, cover, cool user, make sure to put credit NASA

1:40:45

that's all you got. That's all you got to do. You've already paid the rights. You're a citizen.

1:40:54

Member when we lost Malaysia Airlines Flight, and then they released a bunch of the the possible locations, but they just didn't have the resources to comb over all of that area. So they were able to crowdsource and basically release those images to the public. And I was on that team. And we went back and we started to Yeah, we started to look for the Malaysian flight. And by doing that,

1:41:23

you know, it gave a gave everyone a sense of the

1:41:27

actually contributing to try to figure this out. And if we can do something, something similar, where we can go back, say, Okay, this, this, this series of satellite images, or what have you, taken this certain days that may or may not have a certain object and use the time of the report assigning, here's the angle, here's what the report is saying, but all this stuff, and put that in the plan, and allow that to happen. And that would cost them virtually nothing, to try to get intelligence from sources and to do that, it's going to be a double edged sword. Because we the intelligence community is not really, you know, into the UFO scene, so to speak, and you don't need an order you want the minute.

1:42:18

You also don't want them playing around in the world of civilian, as soon as you write the moraine in the world. And I'm not saying they ain't got rain, it's the world is civilian. They got contractors be on contractors out there Jack.

1:42:34

Do what they want, with impunity, through said contractors, as we've heard from grush, and other other situations. Now,

1:42:45

let's go ahead and get into our first clip here. Because if you want to head over to curious rom.com, forward slash video, folks, that is where you can find our embedded playlist there. Just underneath our show files. And

1:43:01

here's here's the first clip. Now this guy.

1:43:05

He may be brilliant, I don't know. But I'm here to tell you he is not.

1:43:11

He's not quippy. And and he doesn't he doesn't move fast when he speaks.

1:43:20

But let's saying because the message here at the beginning of this is so so important. So here it is. Now.

1:43:28

NASA has a statutory authority to look for life in the universe.

1:43:38

And when you think of the universe, and especially what we have learned from the James Webb Space Telescope, how vast that it is, we knew before and there was a NASA scientist, Dr. John Mather, who got the Nobel

1:43:56

that determined that the universe was 13 point 8 billion years old.

1:44:03

And over the years, particularly accelerated in the last century,

1:44:10

we have an understanding that of course, ours is not the only galaxy.

1:44:17

And there are billions and billions of galaxies and each of those galaxies, including our own, have billions and billions of stars.

1:44:30

And with the James Webb looking at the exoplanets, we are now beginning to discover

1:44:40

and somewhere out there, we will discover

1:44:46

another medium size, stony planet, around a medium size sun or star.

1:44:55

Just the right distance, not too far.

1:45:00

Not too close with a tilt in his axis that rotates that has carbon

1:45:07

.....

that will have a habitable atmosphere. And, and he goes on from there. Once again, he lays forth the the necessity of what we would have to find to find life as we know it, conscious life, as we know and understand life. And in addition to that, the fact that it is it is the purview of NASA and the duty of NASA to investigate these things and to look for life.

1:45:41

Yeah, and he was verbally giving you the Drake equation without really giving you support. Yeah.

1:45:48

So

1:45:51

it's important to, number one understand our place in the universe. And we all want to know, why are we here, you know, what's our purpose, brothers, all this other stuff. And that's perfect. But at the same time, it's that, that fear of the unknown, which fears false evidence appearing real, it's a great little acronym. And as you peer out into the universe, and you look around, and you start seeing that, wow, you know, this is way bigger than we thought, you know, and everything that you think you know, right now, is not going to be the same 10 years now. 100 years from now, especially in even Europe further out there, which is a blip. When you look at the overall scheme of things, humans have only been on this planet, if you took the entire history of the earth and placed it onto a 24 hour clock. Humans would be here for the last two sec. Mike, Mike, literally,

1:46:49

in the time that I have had you on my show, the first time in my previous incarnation.

1:46:56

We when

1:46:59

I'd say your second visit, because your first visit was all about the Las Vegas shooting.

1:47:05

But your second visit, we were talking about area 51, things like that, we played the Lockheed Martin clip

1:47:12

with the kid and the walking cooler size.

1:47:18

Reactor who's like, Man, when I'm done with this, I'm gonna need a new job like I can three, four generation this every year, since we have been together as friends, just in that five year span they have ever released Lockheed Martin has released their documentation on on the nuclear reactor that fits inside of an F 16. You know, so it's like, these things are changing constantly, constantly. And there's so much going on in the background that or, you know, things that you and I'm not be aware about it, because we're we worked in illogical, you know, misfits, if you want to call it that, actually have to absorb this material daily, then we can begin when it does come out, we kind of knew about it like a couple years in advance or whatever. But when he does come out, unless it hits the mass populace, a lot of people don't realize a lot of stuff. It's, you know, some things may go into some high end organizations or some organization supplies with power, electricity, what have you. And those things will be game changers for them. But when they actually hit

1:48:30

the marketplace, where we actually can use it, the next, the next one was probably going to be the big one, the consumer market is going to be turned upside down. There's going to be when graphene is truly able to be marketed and question the products in an efficient way. That's going to be a kicker, right? There is just no doubt about that.

1:48:52

In the advantage that we have right now, over bleeding in this timeframe, is the amount of change over such a short period of time, like what you're talking about is so huge, that it's hard for something for anyone to keep up with much less your average person. So when we come out and we say stuff, it's funny because it will say something, you know, a few years ago, like when we were talking about the fusion reactor from Lockheed Martin. And that video had been made, what six years previous? I think it was made in 2013 2014. But it's really it's your no one had the hardly anyone had ever seen it.

1:49:30

And

1:49:31

for us to go across it and you know, within 10 years, there's something that Lockheed is going to basically put out to be tested

to basically put out to be tested.

 1:49:42

That's that could not be done.

 1:49:46

In years past, if we started approaching 70 to do the same thing, they would still be working on it.

 1:49:55

But now, I think the way the doors opening up and a lot of times people's

 1:50:00

Do you know when technology comes to the market? That's so far advanced? They one say it's the evidence of advanced engineering. It's evidence of possible reverse engineering and stuff like that. Yet the you have to wonder since, man, there might be something to that is every now and then as I said mega look at something that Wow, where did they get the idea that you could do this?

 1:50:23

Yeah, yeah. No. And you know, once again, we've had this conversation time and time again, personally and on the show, like, the only way, the only way that you make the trillions back that has been funneled into this stuff, whether it be reverse engineering technology, or working on exotic materials and programs, is to hit a battlefield or a shelf.

 1:50:54

We will not be declassified. Anything that is not in the vested financial interest of our country. We won't like we you won't hear it, folks. I'm sorry. It's if it's not, if it's not going to ultimately end up with money and pocket money in hand, you will, you will be hard pressed to hear them come out and say like, yeah, you know, Aliens. Aliens landed at the White House, like they announced years ago that aliens were flying over the White House and nobody gave a damn afterward.

 1:51:31

House in fleets for weeks.

 1:51:36  
One

 1:51:38  
of all places to fly? Yeah, we're Pentagon, the White House and they

 1:51:44  
gotta be more cheesy.

 1:51:48  
Even even seeing inside of the social media, and I'm in I'm in a lot of social media groups. I'm on the TIC TOCs. Now, Mike, among the TIC TOCs. You as a member I saw you.

 1:52:01  
I saw your name come across all right. Oh, no, we are

 1:52:06  
as curious. So

 1:52:10  
yeah. But, you know,

 1:52:15  
there there's a stigma to being a NASA scientist, no different than there is to being an experimenter period.

 1:52:23  
That's true. And, and being a NASA scientist or being a scientist that is investigating this. There is a stigma to it. You know, fortunately, yes. The term has opened up a lot of things. It's opened up a lot of conversation. It's opened up a lot of amazing things, including,

1:52:47

and I had it up just a minute ago.

1:52:51

This article was from today, the the news came out two days ago, actually, oddly enough, using James Webb scientists discovered carbon dioxide and methane and a habitable zone planet.

1:53:08

Like, exactly the qualifications, that that the good scientist in the nasty bits that the NASA group was just talking about, we would need to find carbon, we would need to find methane, we would have to be in the Goldilocks zone, it would have to be

1:53:26

like, every one of these things is there, all the markers.

1:53:31

We'll see what comes in, we'll see what happens. But

1:53:36

they're also looking for other ways that some of the some of the income molecules and stuff that we'll see in the atmospheres of these exoplanets, are are made using processes that may or may not come from life, obviously, methane Well, or it means a plant has got a bunch of cows.

1:53:57

In that's how we associate with our planet, but we also have to look at a lot of creatures live on our own planet in areas that we once thought were uninhabitable. Obviously, the bottom of the ocean is a classic example of that, but the geothermal vents, deliver. They just need energy source. That's what we're looking at in Gladius. And in there, too. Yeah, exactly. So when you when you have all this, you Okay, let's look at the start removing of the possibilities. And what comes lesson, let's find some way to concentrate. Because that point is is relatively close. It's not that far away.

1:54:37

To see if any other types of signals are coming from that general direction. We're heavy. But

yeah, I'm excited about that. I hope, I hope and I need to do to this

 1:54:47  
lifetime, then we get that answer. And, you know,

 1:54:52  
the interestingly enough, one of the scientists

 1:54:57  
was was mentioning the fact of less

 1:55:00  
And we aren't saying that it's not the case, it's just the fact of, there's one of two ways like scientifically, one of one of two ways that you can go about

 1:55:13  
finding a needle in a haystack, the number one, you got to have a good definition of what a needle is, and find a build a detector to detect a needle. Right? Don't know what needle is right now.

 1:55:30  
We don't we don't know what that is. That's why the unidentified is there.

 1:55:36  
But we do know hay. And we know hay very well. So if we can use the technology that we have, and the methods that we have on hand, and new methods, like AI, things like that, to examine this evidence, put it up against known quantity lives, and get rid of the known quantitative, then yeah, now we're dealing with the true anomalous of the three to 5%.

 1:56:03  
Sure.

1:56:06

Hey, yeah, and we can learn that well, hey, then we know what's going to be left as is the owner to dealing with this anomaly. So now we've got something to work with. Now we've got a set of data. But right now we have that set of data, and we're trying to call things to get to that set of data I kept saying at the MUFON symposium, I cannot wait until they leverage AI on 50 years of MUFON. Like, I just got goosebumps thinking about it.

1:56:41

The possibilities, the connections that we have not seen the patterns that we have not seen or considered. It's gonna be phenomenal. And that's exactly what these guys in the the NASA panel are saying. Now, the first question, which I love came from James Fox.

1:57:03

And I'm gonna play it because it was epic. It was great. And it was one where like, there was a stunned silence where nobody wanted to answer his question.

1:57:16

Of course,

1:57:18

we're all like, oh, did I drop my keys? Or?

1:57:23

I can't find my room key.

1:57:26

I'm sorry. Was there a question? Like?

1:57:34

So let's, let's play that out real quick.

1:57:39

We'll see how it goes. Please, sir. Thank you very much is directed to Mr. Nelson, thank you for

being here. I two quick questions. One is how can we make the determination of what something isn't when we don't know what it is? And B, after a careful review of the data, if it's determined that some underline the word some 10 times UFOs, or UAP originate from a nonhuman intelligence? What's the plan to disclose that to the public? And can you identify yourself please, James Fox, thank you.

1:58:14

I'm sorry. I'm what Ella independent media. Thank you.

1:58:21

Well, let me repeat.

1:58:26

Let me repeat what I said.

1:58:30

I think it's important that you hear this word for word.

1:58:35

The NASA independent study team did not find any evidence that UAP have an extraterrestrial origin.

1:58:45

But we don't know what these UAP are.

1:58:51

The mission of NASA is to find out the unknown.

1:58:57

I've said several times in my comments here today, that we NASA deal openly and we will be transparent on this.

- - - - -

1:59:08

And we're trying to address the question. There's so much concern that there's something locked up classified.

1:59:19

And the the American government is not being open.

1:59:24

Well, we are the American government and we are open and we're going to be open about this. We don't. Again, I'm going to repeat that statement. But we don't know what these you APR, but we're going to try to find out.

1:59:40

Thank you very much. And is there a plan in place if it is determined that some of them represent or originate from a nonhuman intelligence to tell the public is there a plan or if we are what I said we intend to be which is transparent. You bet your boots we will

2:00:00

saved.

2:00:01

And I've tried to, you bet your boots. You gotta you gotta

2:00:08

I like him a laptop at times. And he's very straightforward, very, very easy to communicate with guy. He doesn't like BS. He doesn't like deception. He doesn't. He's just, he's just the class. The guy's really cool. And I don't I don't see him as I don't see him as someone that would harbor any information in this study that would show that there's advanced life or, and also the

2:00:42

NHS.

2:00:44

And I'm curious. as to overtime.

2:00:50

I hope he remains that way, obviously. But most of the panel members that are there are very similar. And their backgrounds and how they approach

2:01:03

how they approach the evidence that they look at.

2:01:08

They want everything open as well. And I think it would be very difficult for someone to keep anything under wraps, that comes out of that committee, I think it would be I mean, they may keep it under us for media concerns, like they'll release the information in a couple of days or a week or something like that. But

2:01:28

I don't, I don't see.

2:01:32

There are Bill Nelson's directive. His directive says nothing about

2:01:39

keeping information away from the public or reporting their findings to specific channels. If I see no NASA reporting within in concert with arrow, however, they are not under any guise of Arrow, they are not under any guise of any intelligence agency, they are not under any, despite the fact as we brought up numerous times, you're hard pressed to go be a pilot for NASA unless you've got strikes from some sort of military outfit. But that's typically because payloads and missions while you're up, there are sometimes you know, maintaining or launching National Reconnaissance objects, things like that. So somebody has to have some kind of clearance in that, right. But it's

2:02:28

on that shuttle mission, or everybody on the mission is military or as a military background or as a classification of clearance.

2:02:38

And also, as far as,

2:02:42

as far as any any of that concern. If you go back and look at the previous studies that we've talked about Blue rookie, and then go all the way up to the UAP Task Force. All of those, every single one was under the DoD umbrella. Every single one. Yep.

2:03:01

This is not. So this, this does have a little bit of air of something a little different. And in this day, it was 25 panelists that they brought in, I think it's 25.

2:03:12

Each of them come from their own their own expertise and in their own areas. And they're not NASA employees.

2:03:22

People are not NASA employees.

2:03:27

who work with NASA, none of them are like, like, hi, I head up the lunar lab at NASA, or anything like right.

2:03:39

They are all people who take part in NASA, NASA funded studies, that kind of stuff.

2:03:46

Right? Some of them NASA has worked with before, there's a couple of miles back NASA hadn't really worked that much with before they've been possibly two adjacent,

2:03:55

you know, like a contractor or something. And so like they, you know, they would hire somebody to come in from outside to make certain that this engineering on this one project

was done properly, you know, in accordance to whatever rules or laws or regulations I guess. And and I am not saying that NASA doesn't hold a few deep, dark secrets.

 2:04:17

Absolutely. Because they were the ones who got us into space who kept us in space who keep us in space, everything else there. There is a realm of knowledge and cooperation with the government in the alphabet agencies that's there that it's not necessarily their purview to classify things or anything like that. But your during tooten If something happened, that rang a bell.

 2:04:45

They they'd be told to shut up.

 2:04:49

The closest thing that

 2:04:52

ever happened a national that would show you that cause for possible alarm or cause for questioning is when

 2:05:00

You go back and you take a look at what happened during the show the to shuttle Benson's

 2:05:05

term, lock the doors

 2:05:08

and lock the doors doesn't mean you know locking doors to Lockout and information and nothing's gonna get out of this room. It's basically that they need to secure all the data, go back to your older stuff, make sure they did anything proper outside.

 2:05:22

But it's truly transparent civilian agencies one letter off from another agency, there's I think,

2:05:30

NASA and say, they're not related at all, obviously. But the information that is garnered through a civilian agency, like NASA is utilized across the board.

2:05:44

And they have liaisons, speaking of liaisons, this is classic. The liaison that used to be the liaison between

2:05:53

NASA and the Department of Defense is now the head of their UAP.

2:06:00

Research. So, I think, Mark McLennan.

2:06:10

NASA's, with NASA makes measurements of his background and kind of, because I have similar background, my job is being done. Of course, it was when you go back and forth between different agencies, you got to have a wide growing sense

2:06:26

of knowledge of different

2:06:29

different technologies, different rules, regulations, how they relate to whatever. And a lot of this, you're not just a conveyor of information, you're also the person has to report that information back. So you have to have your your your stuff together. So this guy's got to you got to be on top of the game. So

2:06:49

if you can pull his information, but if you do a search for NASA names, new head of

2:06:54

UMP research, you shouldn't be there.

 2:07:02

From what they were saying in this panel, that they are not releasing his name publicly. I just released it.

 2:07:15

No, no, no.

 2:07:17

They were they were asking. Somebody had asked that, and know that they didn't name him.

 2:07:26

Hold on. That's the names.

 2:07:31

I think it's Mark McCarney.

 2:07:34

The thing was, was getting someone that had that you can because he's going to have to work with DOD, they get

 2:07:43

information that they have been going back and forth. They go back and forth and utilize all that. And plus he has to have a wide range of knowledge of himself and what tasks and what things he's worked on. And so far, just in a cursory look at his information, it looks like he's the right guy for the job. It looks like it might be it should do pretty

 2:08:06

well, yeah, most definitely. And I mean, you know, he has a background in this stuff. Once again, he has a background in intelligence, he has a background in,

2:08:17

in knowledge of enemy tactics and what they have what their capabilities are.

2:08:29

Yeah, well, especially whenever you're talking about working in concert, with with military, things like that, it's not that once again, anything that NASA has, is classified, things that they find might be classified.

2:08:49

But that's not their process.

2:08:53

Actually, you know, so weird. I got to steer the Mars Rover when I was ever in Pasadena. And while I was there, I asked some rather open

2:09:05

questions. Some of the people I met with and some some in private and some, when we're seeing it like roundtable during lunch, they have a break room and kind of just sit down you know, like, Who's this guy? You know, because they're like, the new guy and Air and

2:09:22

Radiation say, think about this where he goes think about that. And I said if he gets

2:09:30

it since it happened, that you guys had to clamp it down and

2:09:37

you're not sure what it is.

2:09:40

And the only thing that was ever come close to that is the anytime the propulsion system on a on a craft involves something nuclear, and that was when the the Atomic Commission would come in and handle that aspect of it. But that's that's it. If they discover something, it's theirs.

2:10:00

because so many people can

2:10:03

can tap into that information stream that comes down from an international space station and comes to Mars. You can listen in. I remember where the shuttle was the show came overhead with your ham radio done properly. He talked to the shuttle astronauts if you want to see.

2:10:20

Yeah, that can still listen that I don't think you can talk anymore.

2:10:26

Yeah, you might up there, but still listen to what's going on. And yeah, the live stream is there like that's, that's right there in our playlist, man.

2:10:36

Yeah, but

2:10:39

I don't see that there's going to be any any problem with that because the term disclosure is, is such a a term in our community. That is like the Holy Grail term. It slows

2:10:54

scientifically, just

2:10:58

scientifically, prove scientifically, disclosure, is a legal issue.

2:11:07

That

 2:11:09  
disclosure is what we're dealing with with grush.

 2:11:13  
Works like disclose where the money's went.

 2:11:17  
There's an obvious here's an obvious paper trail of black money, disclose what's behind the door? No, we won't. Yeah, that's just this is non disclosure. NASA has nothing to disclose. They, this has not been a going pursuit of theirs. Admittedly. I mean, there's a there's pictures things like that, you know, there's there's all kinds of stuff whether or not you believe we went to the moon

 2:11:46  
that's, that's a whole nother round. I mean, good God man, I had great grandmother that she, you know, Manning?

 2:11:57  
situation was the uncle that

 2:12:00  
you have to sit back and wonder, are they expecting someone to take like an Army team of guys go into rentpath and find hangar 18 or whatever, and open everything up in

 2:12:15  
the show me?

 2:12:18  
Yeah, and every, it's almost like, the End Times kind of thing where every few minutes, there's disclosures coming disclosure be here. Remember, it was gonna be wrapped up in the UAP task force report. And then it's gonna be wrapped up in this report. And it just keeps going, they keep kicking, they keep moving in the field feel good. And they keep kicking the ball down the field?

2:12:40

Again, you're exactly correct. Actually, you said it more pointedly that I'm probably about the slaughter is, you know that it's going to come through scientific discovery. And discovery is not disclosure. Every is just as a scientific process.

2:12:55

Learning about the world around you, and

2:12:58

you put that information out, the more the more people that have eyes on this, the better off we're going to all be and being able to study this and find out what is really going on.

2:13:11

In absolutely the findings of these scientists, other scientists, everything else will lead to disclosure, no doubt, no doubt. Because once again, once, once it comes down to the point of, well, it's gotta be this technology.

2:13:30

At that point disclosures, they're like, you may as well admit that the technology exists because we know now that it exists.

2:13:41

We've quantifiably proven it through science and discovery,

2:13:46

that it exists, so you can't deny it exists anymore.

2:13:51

And that's just not going to be some big debunking team to go in there and debunk all this. That's not what

2:13:58

11 2:13:30  
we're talking about.

2:13:59  
And I think, I think when TTSA was out and about to the stars Academy, and we all had the three videos and, and, and what have you, as each video part, little parts here and there were being torn apart. Unlike TTSA, or some other organization, you NASA would have to agree that certain aspects of the video are not as we thought or something like the classic examples go fast. Obviously, it wasn't, it wasn't anywhere near the ocean. And in relation to that as speed was far slower than than they had alluded to. But those kinds of things or observations or peer review, and when you have that type of openness, that that's something I think that would be cool were announced as a NASA panel. And then the NASA within that NASA panel is someone that's charged with this getting this information out to the public as quickly as

2:15:00  
possible and, you know, just like Susan golf and in my head.

2:15:05  
And I hope going forward, that flow of information will be free for him

2:15:11  
to keep waiting for these meetings or reports to come out, just just just put it out there, just like they do everything else. I mean, that is that is very much what they are laying the groundwork for right now is, once again, we're removing that,

2:15:29  
that scab of stigma within the scientific community to say, Hi, how you doing NASA research? I'm looking into this, just wondering if you've run across this kind of data in your work, you know, and

2:15:47  
coming at it like that, you'd be surprised what other scientists may be like, you know, come to think of it. We did have some of these weird things. Here you go.

2:15:57  
Where, hey, it may it may have just been an anomalous thing on a unmetred, you know.

2:16:05

But if it correlates and leads down a trail of discovery, scientifically, it's an important clue. You know, what, if anything, do an explanation as to if someone walks out of their, their front door of their house, and they see something. And then later on, if the government comes in and explains what the hell it was, no one's going to trust that no one they want it to come from?

2:16:31

Well, someone

2:16:35

but But NASA is the government, but it's not that tight that part of the government is everyone's concerned about what government purview? Like they, they are funded by the government. And yes, they are. They are the National Aeronautics and Space Administration. And that's exactly what they've been saying is the area notice. Like, even figuring out what these things are and how they're flying. That's our job.

2:17:07

Guys, it's over. Yeah, that's that's exactly what

2:17:13

it says. It says something the national security threat has been thrown around in this arena, so much.

2:17:23

Since all, the latest history, started valuing data back to TTSA, I guess.

2:17:30

But when something becomes a matter of national security, then we would probably wouldn't know about it at all. You got guys flying around the back of their planes with their their iPhones out taking pictures out there own canopy of objects. And these images are getting out which some of them turned out to be Batman in shorter volumes or whatever. But that's okay. It's still getting that mean, they were willing to not utilize the \$3 million cameras just on their wing, and the \$1,000 camera in their pocket, but they still got the information, they still get it out.

2:18:05

And as we look forward, I hope that that utilization of our resources is done in such a way that's proper, it's managed properly, so efficient, and things like that in the past. We've always all every study I've ever seen in the past, they've always had some weird things. And as far as getting answers, we, at the end of the day, we always remember government spends \$20 million trying to determine why or stubbed his toe or whatever, stuff like this, why would they spend that much money so some people view this as the same thing. They view it as the government putting money into a a research project? Oh, this is a whitewash.

2:18:52

Yeah, this is a veneer nothing more for. And you know that that brings up the final part of our discussion tonight, which was broached, because these things were happening concurrently in in the social media world.

2:19:11

But a reporter from the BBC did broach a question

2:19:17

about the Mexican alien bodies, brought forward by Jaime

2:19:23

sawn

2:19:24

to the Mexican Congress.

2:19:28

I have said on social media like I hope

2:19:33

I think it'd be great. I think it'd be awesome.

2:19:37

I don't hold out a whole lot of hope.

2:19:41

Not after not after a fairy body. Not after, you know, the Paracas mummies that we're pretty well proven to be human.

2:19:53

Yeah, like, Yeah, but But once again, that's where

2:20:00

Peer Reviewed science comes in and access to data.

2:20:06

Once again, even and you can say what you want about the Paracas, mummies things like that Sure Gaia network, they they did a study,

2:20:16

they have shared that data with nobody, and they share samples with nobody.

2:20:22

And so anything, we can go get some peer reviewed information. That's exactly what NASA is saying is like, this is what we do is peer reviewed data. Like you want to look at lunar rocks, give us a mailing address, we'll send you some lunar rock

2:20:41

shows, then you're doing the scientific work. And we will gladly share data with you to the point that every like everything is there@nasa.gov. Like all of their stuff,

2:20:53

right there like nasa.gov, forward slash UAP, is where you can find all of their UAP stuff. So

2:21:04

I think there's going to be a rollercoaster ride, I think there's going to be a lot of buildup

2:21:10

for whatever the next report may be, because the

2:21:14

same individuals out there that tend to hide what information may or may not be coming out, and then when it comes out, it becomes anti climatic and everybody's upset, and then they do it all over again. And the same people, and the same people get all excited again. And after a while you kind of get you turned off to that. But well,

2:21:38

with the height being said, let's let's get to that hype question real quick from the reporting.

2:21:46

yourself to please Good morning, Sam Cabrera with BBC News, digital. We've been talking a lot about since shifts from sensationalism to science today. Has NASA been in touch with the Mexican authorities about the rather sensational revelations earlier this week of two allegedly non human corpses? And what if any importance to attach to these discoveries?

2:22:09

I think David had

2:22:12

prepped for that one. Well, you know, this is something that we I know I've only seen on Twitter. So it's

2:22:22

when we have unusual things. You want to make data public. I think of this as like, NASA has one of the most valuable samples from outer space lunar rocks, what do we do, we make them available to any scientists and what

2:22:39

we don't know the nature of those samples that were shown in front of

2:22:43

it. If I was the Mexican government, I would wreck our banking recommendation to the Mexican government. That's not our charge. Here. We're doing this for NASA. My recommendation was if you have something strange make samples available to the world scientific community. And we'll see what's there. I'll just add, one of the main goals of what we're trying to do here today, is to move conjecture and conspiracy towards science and sanity. And you do that with data, as David says, and that's the whole purpose of this study. And this roadmap.

2:23:17

Thank you. Thank you. Love that guy.

2:23:23

Some I love I love listening to him speak he is so entirely cogent with what His mission is and

2:23:31

all about these he's fantastic.

2:23:34

Yeah, and you can you can rearrange his eyes and no the wants to see things a different way. But he's quite comical. And in that in some regards, I'm sure we're thinking, the first few minutes of some of the speeches is him explaining

2:23:51

his thought process of taking on this task of being that spokesperson.

2:23:57

Even the

2:24:00

the straight out bullying of NASA scientists, online,

2:24:08

social media, everything else, like it's one of those that is that is not how you get somebody's help.

2:24:18

You also gotta remember that if you want if you go into a bar that's known for bar fights, and you see a bar fight, you can bet about the bar fight?

2:24:30

Now you can't but you can you can do that all day long, but you're still gonna see bar fights. And party bars either start the bar fight or to watch the bar fight if that gets comical. So that's what we're that's what happens with Twitter. That's why I remember the early days of Facebook and some of these others is that people come on the trolls and then they do and that's how the website I built for the nice community which is Boyd farms.com. That website was created because

2:25:00

To the troll, I decided, you know, nothing is crap, I'm gonna do this this way, and let it be the best I belong essentially to the people, the only will ahead, don't attack an individual, you can attack some of the work, you can attack, whatever, whatever you want to do about what they have done as far as work is concerned, whether it's a product or whether it's whatever it is, but when it comes to the person, and and I think Twitter allows too much of that to go on, I think and, you know, since it's cans, and it's now x and, you know, heavier, it's possibly getting a little better in some regards. But that's going to be a product of the environment. And as, as you won't.

2:25:46

That is a lot of the conversation that they were having was that, that that seems to be

2:25:53

all over in society right now. Because that is that is just the way of social media, you know,

2:26:03

as they are growing into this, they've, you know,

-----

2:26:08

yeah, like, it's, that's where

2:26:11

they control the release of information, and not necessarily rely on feedback through social media, I think it'd be a lot better off just like this, like NASA does currently, whenever they they have information or what have you, they put it out there official channels. And once they Once that information is out, disseminated blah, blah, blah, they're not going to rely on Twitter, and rely on Facebook or whoever to release information on and then not expect, you know, the 2% or 3% that's out there that love to store up things to come on and do it. But yeah, I think training needs to be done also for anyone that comes into this arena.

2:26:53

That explains a you know, I think they know it I don't I don't think they are had weakened. And then all of a sudden.

2:27:02

But Brother

2:27:05

You know, as well as I do, though, like that's a different level and a different arena. You know, and and your casual scientist who is out there who may not may not be on the Twitter's may not be on tic TOCs or Facebooking all day, you know,

2:27:28

profile probably, you know, yeah.

2:27:33

I've seen a few come on a show and then

2:27:37

just kind of

2:27:40

like, these communities are sharpened like rapiers and they use them like friggin machetes.

 2:27:50

Like it, it can be a bloodbath, sometimes inside of them, you are not careful if you are not careful. What tropes you tread on and hay net same as our conversation with Jack Sarfati. You know, whenever we had Jack on that one time where it was like, What the hell are you talking about? That's not on topic.

 2:28:12

Yeah.

 2:28:15

down dude, he was like, Well, I don't want to talk about that. Because that's that's not what we're here talking about. That's not what we're talking about today. So now and you do that in some communities and they will they they will lambaste you most staff

 2:28:33

enjoy your pee tard my friend

 2:28:37

especially in some of the this subculture communities but some of these some of the communities that they have been together for so long that they allow only, you know, their friends so to speak to say something that might be a little off because if you say because you're the new guy might guess where it's kind of like an echo chamber. Yeah, exactly. Read it read is a

 2:29:02

prime example of some of that. But I think overall, the if NASA and this panel come out with a ground shaking, mind blowing, something that they find

 2:29:19

it's so gonna go the same process that they did before remember back when they were they were gonna say that they found the possibility of life on Venus.

2:29:29

You know, and, and that information was solidly doubt that we knew it was a big thing. It was going to come out on like a Tuesday or something like that. But the Friday before I'd already

2:29:41

been purged as part of that information as to what it was. I said, this is man, you guys are getting lambasted comes Tuesday because if this comes out that way,

2:29:53

and the public's expecting something ridiculously explosive, then you're gonna have to explain this

2:30:00

scientific aspect of it in terms of everyone's gonna be able to understand as to how important it is. And then nothing you've heard nothing about Venus since around that timeframe, right?

2:30:12

So

2:30:14

and that's the kind of thing that I hope this doesn't happen in this arena where they find something it gets

2:30:23

put out there, and then all of a sudden, it's, it's shut down. I wonder if we're, if these guys are truly the scientists that they need to be or the experts in need to be in their fields to be a member of this panel. And I hope that by the time the information gets to us, that they will have researched it to the point where they can make a definitive answer as to what this is. I want to know what things are, I don't want to know what they aren't. You know, we look, we look for these organizations for answers. That's what we want. And when we don't get them used to Athens, a lot of people don't respond too.

2:30:58

Well, or if they get the answer that they don't want. Right. Sure. Yeah.

2:31:07

Unfortunately, they got some answers.

2:31:12

Got some answers. One of them one of them was about go fast.

2:31:19

One of the reporters who was like, this is one of the videos that was brought out originally and was on the forefront of all this, and now you've come through and debunked it. And I'm like, Yeah, unfortunately. Yeah. Like there was some basic trigonometry involved with all the data right there on the camera. But

2:31:41

yes, finally, know, when I saw that, like, I saw I almost spilled my drink, standing up, like, yeah.

2:31:55

The whole time was like, there's all that data on the screen, so much data, there's so much data, and then even Dr. Eric Davis, he said, mice math is wrong, and all this other stuff. And

2:32:09

yet,

2:32:10

the thing is, is that if there's enough information there, by the time it got it gets to these individuals that are on this committee, I want, I, I don't want to be disappointed in them. Well, I want them to come out and say, We were given this video and as as we researched the video, we could tell that the information inside the video actually gave us some more good I think the problem is though, like

2:32:37

culturally, is that people people want these scientists to be wowed. Or, or excited about this data.

2:32:52

Points of datum and these this set of data.

2:32:56

Maybe if it's another wirelessly no like thing, but is there even with a WOW signal?

2:33:04

There's the initial Wow.

2:33:07

The data and let's start doing it the data. Let's now it's out of my hands, it has to be out of my hands because I was wowed. So to give it to somebody who can look at this data dispassionately, like that's the job of a scientists people is to look at it dispassionately and I'm sorry if they are like as passionate non fire about it as I am. You know,

2:33:37

if you if you pass it out to enough people, like I say on the on the crowdsourcing and some

2:33:44

there are plenty of people out there that you that are not necessarily double PhDs or whatever. But and have a good working knowledge. I mean, myself, I don't have a double PhD Midwest doesn't have a double PhD. There's a whole bunch of people that are out there that look at this subject as a whole bunch of

2:34:05

their labs by friggin masters students. Yeah.

2:34:12

Yeah, or just put it out there and anyone take it and then see what comes back and then sister that you'd be amazed at how fast we can figure things out. That because it'll take two years.

2:34:25

Yeah, exactly. We mean, within hours, you'll have enough feedback that we can probably say,

Well, I didn't even think about it from that angle. Yeah, that object is the 1300 ADP, not near the surface. And once again, just to loop this back to the beginning, there is the idea that yes, changing that definition from UFO to UAP scientifically is hugely important. Because it it changes the direction of movement on the board of the piece. You know,

 2:34:59  
it's no

 2:35:00  
longer in the linear fashion that it was an in the gnome fashion it was it is now moving in a new fashion, it is now moving at a new speed. And because of that can now be looked at communities like NASA, who like NASA themselves and saying prides themselves on the community sharing of information on the crowdsourcing of information on the sharing of data, evidence, samples,

 2:35:30  
things like that, so that we can all explore and figure it out.

 2:35:36  
And then lot of times when people change the term or something by broadening by changing the term, they basically broaden the canvas in this, this overall picture is going to be painted on, and it is all about the picture. And I think I think that's a good thing. And

 2:35:53  
we don't want to leave anything out where, you know, like, it's compartmentalized, almost you want you want to cover everything and from some things UAP is unidentified Nomis phenomenon, Americans flying, floating, farting, wherever screwing under the water. Flying through lava doesn't matter.

 2:36:14  
You know, the audience may be tired of it. I started saying it right up around the time of MUFON symposium, and I've been saying it that that beautiful term of non human intelligence removes the idea of alien.

 2:36:32  
Right? The work that the NASA panel is trying to do by saying UAP

2:36:38

and arrow and everybody by saying UAP instead of UFO is to take it out of the box that it's been in.

2:36:47

And scientists won't look at because it's not inside of their box of science.

2:36:55

We're not going to look at UFOs because it doesn't fit inside of our box of science. And here's what's cool about calling it all a UFO and saying that it's alien in origin. You are being no less narrow minded than that scientist because if it didn't fit inside that box, then then it's not

2:37:16

right.

2:37:18

So we have to lift these veils we have to be willing to use new terminologies we have to be willing to crowdsource information we have to be willing to turn AI loose on datasets like crazy like that's gonna

2:37:35

be huge. Hopefully we won't necessarily be the champions GPT 3.0

2:37:42

You know we need we need to do a whole episode for somebody about AI i don't know i think i think a whole bunch of people are worried about a whole lot of nothing right now. Literally like

2:37:57

a task in AI and it only comes up with with things that are out there it calls information that's out there and then comes up with similar information

2:38:09

Yes, it does. When you have it extrapolate it kind of extrapolate any creative process the

2:38:18

AI it's people not being able to tell the difference between an AI and somebody writing

2:38:28

that's the problem

2:38:32

or just like the videos remember what your videos of people who you know that person

2:38:42

no like Robert Duncan there was probably about two thirds that was right there like I'm not gonna lie my my new bio was was AI written folks.

2:38:55

And it reads pretty well. It reads pretty well I went through I edited it i Fact checked it all that kind of stuff. But it reads Great.

2:39:05

to fact check your own bio.

2:39:08

Make sure that the things that were in there were right.

2:39:14

Quite honestly, it's it's it's remarkable. And the thing, the possibilities that are out there, great. But you've still got to call through the data afterward. You know,

2:39:27

whenever you give a task, that kind of stuff like I don't think it's taken anybody's jobs for a long, long time. I don't think it's I don't think it's going to Whopper and taken over nuclear codes or anything like that. Like right now it can't even draw friggin hands wrong.

2:39:48

The same problem as every junior high artists out there, the hands are just blacked out

2:39:58

aging body the hands

2:40:00

So like yo what is

2:40:02

that six fingers

2:40:06

but the people that do all the copywriting and stuff like this not copyrights but the way you write copy or you write stories, oh no.

2:40:15

They, they, they're gonna have they're gonna have to shift their focus quite a bit and they're gonna have to understand that if I was going out and I was gonna write a novel or write a book or write a story and I was gonna hire a ghostwriter or this or that I now have the option of using AI

2:40:38

results

2:40:39

whatever it is I'm trying to

 2:40:44  
do

 2:40:59  
was amazing the information came back with

 2:41:15  
was pretty

 2:41:20  
well Mike, I want to thank you so much as always for coming on talking about this stuff  
breaking down this recent panel that just happened

 2:41:30  
all the other research coming up from NASA everything else let everybody know where they  
can keep up with five by five news. I know you have been out on the road working like crazy  
things like that lately but where can people keep up with what you're doing and where can  
people follow along but?

 2:42:31  
Senator tonight we're ready

 2:42:56  
it exactly. Hold on real quick while we close things out with the audience Mike, of course while  
you are online, checking out all of the amazing work of Mike turbo and five by five news both  
on his Facebook page, as well as his YouTube is YouTube. Like all of our guests YouTubes are  
embedded a curious realm.com forward slash VIDEOS. Make sure to stop on by curious  
realm.com Like follow subscribe, everybody. Stay tuned for more amazing coverage from live  
events. We'll be going out to Texas Bigfoot conference here in October.

 2:43:34  
I'm getting ready to be on the road again. So get ready for an awesome pre recorded episode  
coming up. But you can always catch us right here on curious realm.com forward slash live  
every tuesday night, everybody. You can catch us on our YouTube page. You can catch us on

Facebook, all kinds of stuff. So until next time, take care of yourselves take care of each other. And remember, stay curious. We'll talk to you soon. Bye. Thank you for tuning into this episode of The Curious realm.

2:44:08

Stay tuned for more guests forbidden topics hidden hidden truths. Download the official curious realm app and view the knowledge both on our website [curious realm.com](http://curiousrealm.com)

2:44:21

Follow us on social media by searching curious realm.

2:44:26

Curious realm is available on your favorite podcast services as well as YouTube, Roku, Amazon Fire and Apple TV through the APR TV app. Available on all app Marshalls.

2:44:41

Curious realm is a proud member of the HC universal network family of podcasts. For more great content or to become a sponsor of curious realm or other podcasts. Visit [HC universal network.com](http://HCuniversalnetwork.com) today.

2:44:56

Thanks for listening. Stay curious and remember

2:45:00

On the other side
