00:17

Coming from the city of the weird exploring topics from the esoteric and unexplored, two dimensions are known. Shining a light of truth on the darkest corners of our reality. Welcome to the curious realms

00:47

Well, hello everybody, Chris Jordan here coming at you live chat and I hope everybody is ready for the amazing holiday coming up the annual gorging feast. That is the American Thanksgiving. I'm not gonna lie. I mean, I know that there's a bloody bloody history to Thanksgiving. There's a bloody history go a lot of holidays. I enjoy Thanksgiving mainly because I love cooking. It is one of my favorite things in the world. My family was like what can we do? I'm like, sit there. Watch me cook. That's what you can do. Like I I don't care but I'm handling this. I love cooking. So Thanksgiving is one of my favorites. I hope everybody is doing well. Thank you all so much for your support last week. We got some great reviews some some great stuff from our coverage at stairway to the stars. We met so many great people. We had so many returning guests that were there randomly ran into Brad Olson Hey, Oh buddy. We had we were there actively helping our friend Kathleen ball. She gave a great couple of presentations on the Knights Templar in Brazil. While we were there. We had Steve Bassett was back on the show while we were there we met Ronnie Le Blanc. He's He's a wicked cool guy. Well, all kinds of fun stuff. It was a great, great show. We had about five and a half hours of coverage. So it's nice to be back live. I love the live stuff. Not that I don't love covering things out on location. That is an amazing opportunity and an amazing experience to really dive hip deep, hip deep into communities around the country. But man, sitting here at my desk having the conversations like we are having tonight, the second part of the show after commercial break, we'll be joined by our good friend Dennis stone from America Stonehenge if you live in the Northeast if you visit the northeast and have never been it is in Salem, New Hampshire, it is one of the most enigmatic and just fantastic sites that I have ever had honored to visit and to know Dennis on the level that I do now is is wicked cool to be able to get the VIP tour and go behind the scenes and see things that aren't necessarily publicly accessible all the time. It's it's an amazing, amazing site with some amazing archaeological history that we will be getting into with him. Everything from Astro archaeological alignments to histories of local natives that were like hey, that was here when we got here. We have no idea what it was used for. So really

cool stuff coming up after the break in the first segment. Our good friend and guest Dr. John Hall. He is the author of guinea pigs technologies of control as well as satellite weapons new breed Welcome back to the show. Dr. John Hall How are you doing?

03:59

Hey Chris been a long time how have you been doing okay

04:03

man been a little bit a little like crammed just before the holidays everything just kind of like snowballed. As opposed to like normally my industry there's like, kinda like eases into a law this time of year you know? Yeah, it's been it's been slammed. It's been been good but been harried. So how you been doing man? How's the new book coming? How's all the new research?

04:29

Good new book is coming along just trying to get the finishing touches on that and trying to get the government to leave in America get it put out. And of course, I kind of figured I was gonna be hearing from me when once we had another shooter turn up in May and I heard from a lot of media that wanted them to have me on after that happened. Well,

04:53

and you know, whenever that happens, Doctor especially Whenever it deals with military folk, the first thing that always comes to mind is how we first came to know each other, which was the Aaron Alexis shooting at Navy Yard many years ago. 2012. Now, I believe that was and there were a lot of markers there, where, you know, he just takes too much like the gentleman, who was just an off roader and owned an off road business who just randomly went down the tube of violence, you know, and it was very much the same way with this main shooter where he was okay. He was alright. And then suddenly, his his last stint going to the Army National Guard. He was hospitalized for hearing voices, things like that.

05:56

And I think we're troubles me, it's funny that you mentioned that we, we kind of came to know each other during the era and Alexis, shooting in the Navy Yard, which is true, that was in 2012. But you would think, you know, we've had so many other shootings after that. And almost all of these people have claimed mind control, or admitted to hearing voices, or admitted to having a military background that they thought had something to do with it. And you would think that just once a major media source would say, you know, what, every one of these shooters is hearing voices, maybe this isn't mental illness, maybe this is something else. Maybe we should look into ways that somebody can make somebody hear voices in their head, or hear voices around them that they think are in their head. But you notice the major media won't go down that road. You know, it stands to reason that something keeps happening, that you you look for

some reasons other than just turnkey, call it mental illness and other person like crazy, grabbed the gun and started shooting, you know, in the only part of the voices that you hear, and you don't, especially when some of these people have left manifestos saying that they're being mind controlled. And in giving examples of the stalking and everything else that came with it, you would think that just once, you know, a major media source would say, You know what, maybe there's something more to this, maybe this is technology that's meant to mimic mental illness. Well,

 07:24

and in you know, even on that same note, aside from military people, man that same year, was the woman in DC, the single mother, who ended up being shot by the single Secret Service after going past barricades, making a crazed U turn. She ended up being killed by the Secret Service right there in front of the White House. But come to find out, she thought that Obama was stalking her and heard the voices of Obama in her head, all kinds of things. So there was another one that was just utter civilian. That was a prime example of the same thing. You know, Comey

 08:09

to to to others that are of note where there was the guy in Alaska, yep. Went to the FBI and said, Hey, I'm an Iraqi war vet, you know, I feel like I'm being targeted. You know, I'm hearing voices. They're asking me to do things. You know, I know I shouldn't do. And I'm asking for help. And the FBI send it back out. They said, Well, we you know, there's other wrong media, we can't help you, you know, maybe see a psychiatrist, but you know, we're not going to detain you. And then he flew to Florida and tried to shoot at the airport there before he was shot dead. And then you had Myron Mae, that was an attorney. And they had been the attorney general in New Mexico, that attached city in New Mexico, that went and shot up college in Florida, I think before he was shot dead and left a manifesto, saying that it was that he was doing it, not because he wanted to kill anybody, but because it in his mind, the only thing that was going to garner any media attention to the problem was to do something so bad that the media would pay attention. Well, of course, you know, the arrow, his thinking was that, you know, they were going to see it as targeting well, they still saw it as the rantings of a crazy person.

 09:23

Well, and that's just it, and I've got I've got an article from NBC News up about him saying, you know, he believed government stalkers were harassing him using a, quote, direct energy weapon to hurt him. And, you know, I have had numerous conversations with numerous people, even to the point of like, virtual reality, scenario scenarios being projected to them, doctor and one question that we had before we did this I put out a slide on numerous social media platforms like if you're a targeted individual and have a question, feel feel free to dial in. And we do. We did have a couple of responses. One of them was from from a good gentleman that listens regularly whenever you're on an Arizona he wanted to ask how does a person who is being targeted find a doctor? How do they how do they find somebody I mean, most of the population doesn't even know about Havana syndrome, which is the closest thing that is that is

diagnosed. That is that is close to what people claim as far as directed energy weapon in injuries, brain fog, regular confusion in their life to the point of once again, hearing voices to the point of madness, with some of them.

10:56

Well, and just so just so you know, some of those, you know, the the people that are true, the true Havana syndrome victims, for the most part, have had a gag order on and that's why you have it was a 60 Minutes interview, there was a couple of other interviews, and that was about it.

11:09

The one that you see is the is the CIA officer. Yeah, yeah. Who has been fully briefed, who has been fully debriefed, and, and who, though, is coming out and saying things guaranteed, is saying things in an approved fashion? Yeah, well, otherwise, he wouldn't be He, let's just say he wouldn't be getting, you know, medical disability, or anything like that if he was out spouting things that he wasn't allowed to spout. Yeah,

11:39

well, and then the other point I want to want to make for listeners too, with that is that as much as the public may not want to believe that there are directed energy weapons that can be their neurologic based weapons that are directed at the neurologic system of human beings, the UPenn people who actually did most of the research on the the diplomatic victims of this technology, came up with just that, that it was directed energy, that it was probably microwave microwave based energy. You know, despite some of the well known microwave energy experts, who for years have told us that there's no way to modulate microwave energy where it can be used as a weapon without, without causing heat in the tissues. And that's that's also turned out to not be true. And you have to be careful with some of the experts that you listen to that. And I'm not going to name names, but some of those experts derive their income from government grants. So yeah, you know, you know, who I'm talking about without, and most people that probably know what I'm talking about without mentioning names, but, but if most of your income comes from government grants, and you're working for the, you know, through through government agencies doing their research, then you may come out and kind of talk about, you know, how the brain has no firewall, and we do have weapons that can kind of do this. But they won't go as far as saying that those weapons are being used experimentally on the American public. Yeah. Now, as far as far as the question that the listener had, finding a doctor is hard. Because, you know, certainly you, I mean, I encourage everybody that's being victimized by this, make sure you have a physician for the stuff that you really need a physician for. Now, in all reality, you know, your average general practitioner or you know, somebody that you're going to want to, while you definitely need them to treat some medical illnesses, they're still not going to know, even if they believe you on this, they're not going to know how to help you. And they are still going to say, Well, maybe you should see a psychologist or a psychiatrist just over ruled out any mental illness. Unless there's somebody that has heard about it. Now. I will say, you know, 20 years ago, when I started writing about this, just writing about it, you were considered crazy.

14:02

You know, when my first book was medical license, man,

14:05

no, yeah. When my first book came out, you know, my attorney, even, you know, he said, This is crazy, because I've never heard of this. Most people have never heard of this. I don't necessarily believe that this technology exists, and you're probably gonna lose your license for writing this book. And so that's why when people go well, do you really believe this? I risked my career on this, you know, so, yeah, I know it exists. I've talked to CIA agents who used it, talk to NSA agents. It's used it I have those connections. Yes, it's the ESET exist. It's been worked on for a lot of years. And you know, the sad part is and people don't want to believe it. You know, is their technology where they can hear your thoughts in real time? Yes, they're

14:49

actively got up right now an article from Caltech. This is let's see, June 2021. So pretty, pretty much Arden right here recording brain activity with laser light, quite literally talking about a new process where they can record your brainwave patterns and everything else by just shining a laser light on your scalp. Simple as that. That is pretty easy and passive technology man, when when you're talking about the ease with which they could mass swath brainwaves from people to find out average brainwaves in an area, things like that. Average states of mind and an area that's kind of disturbing.

15:43

Well, and one of the one of the examples that I give in a lot of my talks and in my lecture replaces LSP, let's say you ever had one of those days where you get up in the morning and you're well rested, you had a good night's rest, but you get up in the morning and you go to work and you're not 100% You don't feel like being there and you don't feel like being at work. It's a blind day. It's not that it's raining or it's overcast, it may be perfectly fine weather wise, but you still kind of sit there and you know, you're not going to be 100% Not one single part of the day. You know, it's what I call this a blog exasperating day. And then when you start talking to people, everybody else feels that same way. You know, you study there's nobody there's nobody in the office that's like, you know, Mr. or Mrs. shipper that day that just can't wait to do their job. You talk to everybody's calling, honestly, just man just be like, don't even feel like being here just didn't even feel like getting out of bed. And everybody kind of feels that way. Well, I mean, I don't think that that may be necessarily circumstance. On a lot of days, I think. I think the control is such that you can control individuals are using control communities. And that would make a lot more sense because ultimately, has been working on controlling the public for a long time. And not just using this kind of technology using media using the nudge squad, if people remember that when Obama was in it, he started the nudge squad that was gonna get online and in trying to nudge the direction of belief in you know, one direction or another on certain topics.

 17:16

And hey, until quite literally until until crickets started driving people crazy in Cuba, Dr. There, this was all myth. The government would never admit that we had Sonic Weapons, they would never admit that Sonic Weapons were a thing, they would never admit that they were researching into it. Anything like that same thing. They were saying about like a hypersonic weapons or decades down the road, you know, decades down the road. Yeah, you know, they were out loud and proud about things like El rad and stuff like that non lethal is for the battlefield, that kind of stuff. But when it came to the micro miniaturization of those things, like the Chinese Sonic weapon, you know, the the size of an average rifle that can vibrate your brain and give you Havana syndrome type, injuries, that kind of stuff. They they they didn't really cop to that until Havana syndrome hit the headlines.

 18:26

Well, and if you remember, I mean, you and one other media person that that I'm a frequent guest with actually kind of broke that. At the same time. And if you remember when they had that initially came out that government that had the talking point they gave to the media was acoustic weapons. They said, Well, we think it's some type of an acoustic weapon. And, you know, we're really not making too much of it. And I remember on your show, and this other show, I said, it's not an acoustic weapon, these people were all indoors, in that that's a line of sight weapon. And I remember, you know, saying talking to both the and saying this is this is going to be microwave energy. Well, and of course, then the next thing that came out Psychology Today, you know, with detractors posted an article saying that it was mass hysteria, you know, mass psychosis, you know, from stress, which is what the CIA kind of hung their hat on with Congress. You know, when, when, even after the researchers at UPenn said, These people have brain damage, you know, they were the victims of some type of microwave trauma to their neurologic systems, and we can prove that they have brain damage. Even then the CIA still went to Congress. You know, we can't really, you know, we back that up, you know, with our own research, we think it's stress related, and have kind of stuck with that, you know, in the same thing with the Canadian victims, their government kind of turned on him as well, even though there was a promise that they're gonna work with these victims and try to come to a realization of what really has happened. But my favorite is when when nobody bought the Psychology Today article that it was mass hysteria. Then they blamed it on permethrin being sprayed for crickets. Now anybody that knows anything about insecticides, I mean, you know, I'm a farm boy. And, you know, so, you know, I've stood in the fields when the when the crop dusters are spraying in the field, you know, I've bathed in the poison when it's coming out the airplanes, and permethrin, we use for a lot of different things. And it's a Kitchen Safe poison for the for the most part it permethrin was going to make us hear voices, we would all be hearing voices. Yeah.

 20:37

Every country kid out there using that in their front lawn to keep fleas away from their animals would be hearing voices.

 -- --

20:47

Oh, if you go if you go to the store, and you're gonna buy an insecticide, any one of those cans, you know, or raid hotshot, whatever you buying, I guarantee you most of it is permitted, right? Because that's about the only one that's legally left to

21:00

buy well, and the one that got me and still does. And if you're a targeted individual out there, I know that we have quite a few that are listening right now. As we speak. If you hop on over to curious realm.com, forward slash knowledge, forward slash studies. Right, there is probably one of the most insulting things to all of this, which is, which is the Hall Effect study, which, which once again, was a group of doctors who never even contacted you about your work. Never even followed up with the fact that everything that your books is based on is based on much like what I show on the show where it's like, I'd love to say the written a patent out there. But here's the patent. Yeah. Like you had to go through government means to get this book published, because of the technologies that you were talking about. Yet still, these doctors decided to go through and make a study talking about how this this effect of people in targeted individuals, specifically as much like mass hallucinations of hauntings, that all of these people are delusional and are experiencing what equates to a mass hallucination that that has come around because of your work.

22:27

Yeah, and I did, I wasn't real sure whether to be mad that they published that without actually contacting me, you know, because every bit of that, that study, and those claims are based on my two books, and listening to some of my some of my interviews, but you would have think, thought before they were gonna put something out, they would have tried to contact me to talk to me about it, but no, no such no such thing. So I'm not sure if I should be flattered that the truth is so important to the people who wanted to track it as well that they're willing to put out counter Intel, you know, to respond to the tree, which is exactly what that is, you know, that's to try to convince the everyday listener, that the, but even that, it's kind of failed, because this technology is in such a rampant use and the community and in our society now that almost everybody knows somebody that's complained of this now, they may not believe it. And it may think that it's all BS, or that it is mental illness across the board. But I guarantee you if you talk to just about everybody, and you mentioned this technology, they're gonna Yeah, I've read something about that. Or I've got a friend who says that's happening to him, or I've got a son or a daughter that says that's happening to him. I mean, it's it's affecting just about everybody now. Yeah,

23:48

yeah. And you know, once again, I have I have had people do tell me about literal holographic images, almost to the point of like, VR, like, like virtual reality almost be a being taken mentally into another space. And when you start talking about things like MIT communicating with dreamers, not just not just being able to like, hey, look, did you see an ad for Coco? Did you see something that looked like a Coca Cola ad cool. It wasn't just that to the point oh, call and response doctor to the to the point of actively being able to ask a dreamer a question. And that

dreamer being able to answer it. While they are in dream state. Amazing things are happening with this technology. And and to know that some of it may be nefariously routed nefariously used. We did have one call Um, if you give me just a second, I will queue that up. And we will, we will hear the story of this young man who's been going through some things we can talk about a couple of the things he talks about, that are common markers amongst targeted individuals here. Here's that call right now, Doctor,

 25:18

I have been targeted my whole life. I could go through everything. But I'll just say some of the highlights. I was mind controlled as a kid, I was degraded a lot. As a teenager, they would sabotage me sexually. The big attack started when I was 19. Just starting college and stuff, they would make me have the Caridad and made me incredibly paranoid and act really strange around my friends and family, I went to try to get help, we thought I have schizophrenia. So I was trying to get help through medically and eventually I went homeless for more sabotage. I did not graduate college because they would attack me during work and school, and they did another set of heavy attacks from the year 2019. To present, they started attacking me a lot. They would make me feel pain and torture from the signal that they have on me. They would. They've been sleep deprived me lately. They got me fired from jobs all my life, and maybe get into car accidents all my life. So I'm ruined financially. I see they started meet UK around 2020. And I'm still hearing them to this day. There's a lot of sabotage a lot of great degradation, a lot of attacks I've suffered throughout my whole life.

 27:02

So once again, that is an all too common story when it comes to targeted individuals, when it comes to those that have suffered these things, specifically, the degradation. The the turning of society against people is is what gets me more than anything, the way the the way that once these things happen, it's almost like everybody at once turns on them.

 27:38

And that's how it's geared to work. I mean, it's, they designed it to mimic mental illness for a reason. Because for the most part, psychiatry is used punitively in this country, you know, not condemning the entire profession, because they certainly there's a there's a need. But as a, as a physician point of view, looking at it, if you look at most of the way psychiatry is used, at least by the government, is used periodically. You know, if you look in the military, you know, if you've got somebody that has pissed off, you know, a senior, you know, person, and they're up for promotion, and you want to keep that from promotion from happening. You accuse them of mental illness, you know, you send them to a psychiatrist, psychiatrist knows that their job is to give them a diagnosis. And once that diagnosis is given that person, kind of craters, and it's the same thing with targeted the the ultimate goal of the targeting is that you complain to your family, or you complain to your physician. Usually, there's a mandated psychiatric evaluation, you put all of your data, you put a copy of my book and all your Google research from the you put your list of patents and bonus psychiatrists, here's the five or six different ways that you know, of technology that had been proven to be able to put voices in or around you. So it sounds like you're hearing voices when nobody else can. ology that will do that. And the

psychiatrist says, Yeah, but there's no reason they had to use it on you. So you're psychotic, you know, if you're young enough, had schizophrenia. If you're in your 40s, which most of these targeted individuals, notice it happening, you know, late 30s, early 40s. So they're a little too old to be diagnosed as schizophrenic. So they end up with a diagnosis of psychosis. Yeah. And in most of these people, when you talk to them, if they really did a thorough interview, they can tell you the day the stalking started, they can give you plate numbers for the stalkers. And like, in the girl that I wrote about in my first book in San Antonio, all of those plate numbers came back to the same private investigative group that was owned by a former FBI guy and his son who was a former lieutenant colonel in the DOD. So I mean, if somebody wouldn't really invest in a really good history with most of these people. I think a lot of these psychiatrists good to see that, you know, maybe there's a little something more to this than mental illness. And that's where the media really kind of comes into, if major media would step in and say, Man, every one of these shooters are hearing voices, you know? Is it that they're all on SSRIs? Or is it? Are they being targeted by something else? Hey, the government really wants gun control? Is there a way that the government could be creating these controlled assassins in order to get gun control? Let's look at that angle.

30:39

They won't blame SSRIs because then they would have to openly admit that they have no idea how the hell an SSRI works for one person and doesn't work for the next with the exact same symptomology. Yeah, like, half of what I do is medical conferences and the number of those meetings that I've sat in from various manufacturers, things like that, you know, where it's like a I wish the site like we know they work. But no different than other kids in my elementary were put on Ritalin when they were a kid worked bangers for them. They put me on Ritalin. And about three weeks later called my mom and said, We need to get him off because we can't keep him awake. Like it, it looped me 180 degrees, you know, I was one that had the totally opposite reaction, like it really slowed me down. You know. So it's, it's strange, because we don't we don't know how all of those work. But when it comes to microwave weaponry, like the document I've been showing on screen here, the effects of radiation and bio effects of selected non lethal weapons is the name of the declassified document. This came out in 2006. And quite literally, this chapter right here. Clearly the effects of microwaves on brain tissue chemistry and functions are complex and selective. It starts going into body weight, things like that. But the part that I have highlighted right now is similar type of effect was observed with exposure to a quote resonance tuned, in quote, extremely low frequency magnetic field. Thus, the database is replete with phenomenological observations of biological systems, quote, affected by exposure to electromagnetic energy. And the the sentence just before that is recent published data implicates microwaves as factors related to a deficit in spatial memory function. So like, yeah, yeah, like we know, we know, good and well, what the what the effects of microwave weaponry are?

32:54

Well, and what my favorite line in that study that we selected in bioethics of directed energy weapons in your right, that was actually that was declassified and then reclassified. And it was it was declassified long enough for me to use it in my first book, but and then it went back into classification with Yeah, and which, by the way, at the same time, both of my books became on

purchasable on government computers. To but but my favorite line in that article, actually is when they said he imagined the disturbing effects on an enemy combatant when they begin to hear voices in their head that they know are not there.

33:31

Yeah. Yeah. Yeah. Yeah. And even right, your biological target normal functions, disease states, you know, like, they are calling it target. They are saying that this is this, that the intent of this study was what is the what is the probabilities, if we use this technology as a weapon, this this was a phenomenological study done on the viability of a weapon. Pretty much. So it once again to to say these things don't exist to say over and over again, completely that people who say that they exist or crazy, that even even the and once again when I had the NBC article up a while ago, about about those that were targeted in with Havana syndrome, there, there were right there. There it is still highlighted. About 1000 People have reported symptoms, the subtitle says 1000 people reporting symptoms and that was that article was you know 2022 So as of 2022, we know of at least 1000 people that have reported symptoms to the federal government, and those are federal employees, things like that, that that went all the way from Cuba, to China, to Russia, to Washington, DC being targeted.

35:15

And that's why a lot of targeted individuals that contact me all say, Well, we, you know, we want to contact the FBI, you know, the FBI office or the UN, you know, will help us, you know, we all need to petition the UN, you know, with a grievance and, you know, if you, if you look logically at what the, you know, the end game, the end game, as to this technology, is to control the public. And, you know, especially currently the movers within our government, and at least within mail, actually, within both of our major parties, you know, both have a globalism band, and they want to globalist government and in our intel, Intel agencies are kind of, you know, pick themselves to be the strong arm of that globalist government. So ultimately, the technology is meant to, to control this all, you know, and as evil as that sounds, and Orwellian as that sounds with this technology, it can be done. Well, I mean, it's,

36:18

it doesn't take much and that that's what we say on the show all the time. Whenever we have you on whenever we have Mike Tiburon, you know, much much like it, people think that you would have to convince the whole country for there to be a revolution, let less than 20% of America took place in the American Revolution. The rest of everybody was standing on the sidelines going Hey, man, stop that. You're a crazy person, you know, so much like to get hearings happening in in Washington about UFO UAP. It didn't take 100% It took 20 30% of people going whoa, whoa, whoa, whoa, funding what? Hold on? What secret program that I didn't know about? And I'm on the committee, hold on. You know, and much like this right now, there there is a bill going on. That prevents spying on American citizens, things like that. That is going out there. And and hopefully that will prevent at least some of the use of frequency ranges as far as targeting in areas, things like that. But, yeah,

37:38

we know it's funny, you mentioned the UFO hearings. And, and that's kind of another another little pet peeve of mine that I've had for three years now is that I can go on a radio show a syndicated radio show or go to a university and speak. And I can stand up there and give the most outlandish reports of, you know, the time I've spent with the greys or reptilians that I've communicated with or that you know, I've walked around and you know, saw Bigfoot.

38:09

That's a 10 different episode, Doctor.

38:11

Yeah, well, but you know, that's the point I want to make is that people won't bat an eye at that the government won't bat an eye at that. Some of these big syndicated radio shows won't bat an eye at that. Oh, yeah. A UFO is probably exist. You know anything about it's a big galaxy. There's no they're probably out there. You know, Bigfoot? You know, we it was in the 1900s we discovered the gorilla. So yeah. Gorilla, Bigfoot, maybe that Bigfoot probably exists? So let's talk about mind control technology. Oh, yeah. You know, now you're getting now you're into tinfoil hat territory. You know, now you're talking about, you know, the minds too complex, you know, why would the government want to control your mind? Most people don't amount to anything, why would you want to control them? You know, and on and on, and on and on and on, you know, and, and the media just absolutely won't cover it. I mean, you know, you know, I'm into, you know, film production as well. And we've been trying to get a film done on targeting that's not a documentary and actual Docu drama, entertainment type film, that that tells the story of targeting. Man, it is, you can't even get a production house to meet with you. On that topic. I mean, the last movie that came out, really the kind of books were probably the enemy of the state. And there was one other that I think was called targeting that kind of came close. That was about a you know, a woman who volunteered to be chipped and controlled by AI for a while and it went bad. But I mean, as far as a legitimate Docu drama about targeting, nobody's interested in me. We've got the scripts, we've got the people willing to do it. Can't find any production, people willing to invest in it, because they know the government's going to shut it down. Some of the targeted individuals probably remember, Discovery Channel actually came to me I am wanting to do a series on targeting. And we got about two episodes, three episodes done. When the government said, You're not going to show that here. I mean, there's I think one or two episodes called United States of paranoia, you can find that they put on Discovery in Europe and Finland or somewhere UK.

40:19

Yeah. And yeah, there and gone much, much like, there were there was an ill fated series here in the States called going off grid. And it was a, it was a guy who was a security professional and literally, like, the whole premise of the show was, all right, so So it's time for you to disappear. Like there was one episode that was put out. And I mean, he goes through the fact of like, so so we're gonna start posting on social media, like three weeks before how we can't wait for the upcoming cruise to Alaska, it's been gotta be great, it's gonna be awesome. And the whole time, you're not going to Alaska, you're like, taking a train somewhere else, you

know, and you go leave your phone at the docks, you know, and let it let us sit there and take off somewhere else without a phone light. It was truly like how to vanish yourself from society was the first episode and it lasted exactly one episode. Because it was way too real man, wait way too real a way to like, you know, if you follow things on SVU, you have, you may be able to get away with a crime or two for a little while, you know, because there are some actual methods inside of there. And, and that, I think was the same issue with the series that you're talking about. There were way too many methods that are even just public knowledge that could be outed, to to real public knowledge, you know, beyond beyond the point of digging for a PDF, like, like we've done, you know, well,

42:08

in well, and then looking for when you're looking made known, the chances of any of the major media outlets, giving a fair shake to targeting, I can kind of tell you a little bit of history of where that's gone. If you remember, the New York Times actually did an article that they contacted me on, and we're like, No, we're gonna read it. And I talked to him before we interview with him. And I said, this needs a fair shake, because there's something going on in this in this country and going globally, with technology that's causing us Oh, no, no, no, we're gonna give it a fair shake. Well, you know, they basically used a broad brush to paint everybody that's complaining of this as mentally ill. So essentially, microwave weaponry wasn't at a state where it could be used as a weapon, or be used in a technological means of this fashion. And basically labeled me as a pied piper for the mentally ill claiming to be targeted. Well, then it wasn't 10 years down the road, that when the diplomats came forward, and some of them weren't just hearing, you know, buzzing or chirping in their ears, they were hearing voices as well. And then the New York Times came out with when, early on when the UPenn researcher said, this looks like it's microwave, hearing, or microwave attack. Then they came out with an article saying, Oh, my God, you know, the diplomats are being attacked with microwave energy that can put voices in their heads and, you know, cause sounds in the brain and voice to skull and completely changed the return. But then, when the CIA stepped in and said, Well, you know, no, we're going to call this anxiety and we're going to call the Kreutz or we're going to call it permethrin and there was even well, it's it's two different forms of technology. It's, it's our, it's our counter Intel technology, that's, that's interfering with possible Russian surveillance technology that's creating, you know, a hybrid beam that may be causing it and will then they were quick to jump on the fact that well, you know, maybe it's not microwave. So, you know, it's difficult to get a fair shake for this type of scenario, when there's hundreds of 1000s of people being victimized by it. But you can't get a major media source to actually give it a fair shake, because most of the major media sources do kind of follow the New York Times is wrong as they are on just about everything. I mean, the New York Times is one of the most quoted and repeated sources of news that you'll see online.

44:42

It's definitely one of the news leads out there. You know, as you know, as my listeners know, I follow up a mad number of RSS feeds. Like if you follow the curious realm group, that's pretty much all it is, is RSS feeds of news being fed. Winston. And yeah, the New York Times will typically be one of the first sources out there with the story. Because they've they've I mean, next to the New York Post, they're they're one of the gold this games out there. You know? And yeah, they definitely have their they definitely have their slant for things most definitely. But

but they have been the proud home of headlines like black money UFOs things like that. There's there's been some great stuff by Lesley Keen. I'd love to see someone like her, get a hold of this topic and really start tearing into that. Because once again, I think until we do get media behind this because they want until Lou Elizondo came on CNN and said, hey, check out these videos, we recorded these a long time ago. It wasn't until then that conversation even in the media was okay. You know, and that pretty much came through the New York Times once again. So, I think getting media involved in behind this topic is hugely important, hugely important, and if, if anything, to to outing the technology. Um, I am one of those if, if we can look at the elephant in bite sized chunks and which ones are the juiciest ones to start with? Let's start with the actuality of the technology. You know, because much, much like you were saying like Bigfoot Sasquatch, things like that, if you went to them with the story on that they they would at least gladly entertain the story as a story. You know, but when people find out and see the trail of evidence, oh, whoa, like, there is a massive amount of technology that does this. You know, and, and literally does put voices in people's heads to the extent of there was just the recent study done Dr. Where they reconstructed A Pink Floyd song from people's memories. Like staggering, staggering, basically had them come into a lab listen to a Pink Floyd song, then days later, put them under MRI with other technologies and said, Okay, now think about the song and reconstructed it from their memories. Pretty amazing. But that is the realm of technology that we are currently dealing with. And that's just the stuff that we hear about in the news that does the does. Interesting, sexy science. You know, so much of this is unsexy science that never sees the light of day when it comes to a headline.

48:22

Well, and you know, the rule of thumb they say is, if you're hearing it on the news, it already exists. And it's, it's about 100 years in the future better than what you're hearing. You know, and, you know, another story that I don't know if you caught that I was asked about on another another radio show was, again, New York Times article that Business Insider and several others, you know, kind of you know, rebroadcast but was a group of artillery soldiers in Iraq during when they were fighting ISIS. You know, the one of the one of the ways they defeated ISIS was to limit the number of bombs being dropped by airplanes was the drop some bombs from airplanes, kind of, you know, you get them corralled into one area, and then just shell them with artillery day and night. And these are guys that were with these artillery companies. You know, we're, you know, miles away from any of the fighting so they, you know, they weren't face to face with any with any enemy. But they were subjected to artillery blasts from their cannons going off, you know, for you know, 24/7 for, you know, months. While they were doing artillery roll, a lot of these guys came back and started reporting hauntings. So we're alone, we're seeing ghosts, a bunch of them committed suicide. And it turns out that VA did studies. They found out that even though they labeled it PTSD, but what was just being in the vicinity of these blast, caused a similar similar Are injuries to what we see with microwave energy and the diplomat caused white matter tract damage. And these people started having hallucinations, auditory and visual, and seeing ghosts and committing suicide. And when I saw that article, I guess again, I knew I was gonna get some calls because it sounds really like targeting. And then you have to wonder, is this an organic way of simulating targeting? Is it you know, maybe the government's way of introducing a red herring as an excuse for targeting? Yeah. Or, or is it experimentation? Quite

50:43

a bit of the conversation in the thread tonight is, you know, it being used as a red flag. Yeah, and, and most definitely, especially whenever you're using it, to push a selected populace whenever you have, because there, there has definitely been the research done into how you can drive a populace. It started back in the days of MK Ultra. And let's see what happens to this whole small town whenever we, you know, put some LSD in some bread at the local bakery. Like they, they had numerous experiments to see how they could go through and control the mind on a mass scale. A huge one was Edgewood the Edgewood experiments that that basically, the movie Jacob's Ladder was based on it was it was an LSD derivative. That was that was used as an inhalant that put people into crazed psychotic episodes. And then the idea was to how can we amass basically intoxicated and disable our enemies in the field? And yeah, we did we did mass experiments on on soldiers right here in America. During that,

52:14

well, that's why when I saw the article about the artillery, shell things really you got a question? Are they really looking at the effects of the blast? Or is this a group of soldiers that's being targeted by electromagnetic weaponry? You know, or is it truly something that organic it is happening that needs to be addressed? The troubling thing? Is it the VA told all these guys that they really didn't have a way to diagnose micro injury? Because if you do MRIs on these brains are normal, the normal normal, normal three T MRI shows a normal finding. And then just like it does in targeting individuals, and just like it did on the individuals, that diplomats that were complaining if of Anna syndrome, what they wound up having to do is called diffusion tensor imaging, DTI. And that that actually shows the white track damage. But the troubling thing with these soldiers that were that were suffering from artillery blast, allegedly, that we're here at seeing ghost and hearing voices, they were told that there wasn't a way to diagnose it, and no known treatment in the VA was really only used to dealing with macro trauma, which is, you know, you're being shot in the head or, you know, having, you know, you know, shrapnel to the head, you know, that trauma, that's that's visual trauma to the brain and not in usable trauma to the brain. And, and when I saw that, I just thought, oh, my gosh, you know, we can diagnose micro trauma through DTI. And I mean, I'm in the personal injury business with motor vehicle accidents, a lot of times you'll have a hit to the head, it's not severe enough to cause macro trauma, you know, you don't have a big blood clot on the brain or bruising to bring tissue, you know, you have an MRI, that looks normal, but then when you do diffusion tensor imaging, you'll see that there is a disturbance in certain tracks of the brain. And if you EEG those tracks, where the damages, the EEG is abnormal in those areas, too. And it can be treated with transcranial magnetic stimulation, and pretty successfully treated that way. So that's one of the one of the things that, you know, kind of been, you know, kind of loosely trying to think about doing is getting a group of civilian target individuals, not just diplomat targeted individuals together to do a mass amount of diffusion tensor imaging. So we all have that, that science that are showing that, yes, this type of energy blast to the brain. You know that while you're using it to target someone is also causing brain damage. imagery that we can actually show scientifically.

55:02

Well, yeah, and I mean, I've got numerous abstracts and articles up right now talking about electroencephalographic activity caused by multiple, extremely low frequency field exposures, you know, things like that. And the fact that exposures to RF fields absolutely changed the EEG

of people. And the fact that yes, if you can do that, that means you can absolutely do that in the opposite as well, like you've said, in Guinea pigs, like you said, and satellite terrorism, the fact of being able to heterodyne somebody's EEG signal, to be able to pick up their brainwaves at a distance, the same way that they're doing with this laser technology that they're talking about, in that Caltech article that I brought up at the beginning of the episode.

55:57

So it's it's pretty, pretty wild technology to see that we we have that, that it's out there that it's actively being used. And it's one of those that you really do have to be able to put that fractal puzzle together and see the fact that all of these kind of add up to exactly what people have been talking about.

56:23

Well, and I don't see this getting any better anytime soon. You know, I guess, you know, I'm a political animal, too. And, you know, a lot of complaints on my second book, were very, it was a little too political. But I'll tell you, the reason that it is, and we've talked about this before on your show is that a lot of people that are targeted by this, they focus their time and energy on figuring out a way to block it, or putting your own account or in certainly, that's certainly one of the things you should do. And we have figured out some things that can kind of help, you know, with it. But you know, when the government has invested billions and billions of dollars into this technology, it's going to take billions and billions of dollars to figure out how to counteract it, too. And that's just beyond the expense of, you know, a group of civilian targeted individuals. Therefore, the answer has to be political. Yeah. And the answer is going to be getting, you know, compassionate of leaders and legislators in there that are going to listen and say, you know, what, there needs to be oversight, you know, on the intelligence agencies right now, there is not. And I'll tell you, who made that clear as day when Trump was in office, and Schumer said the Intel agencies have six ways to Sunday to get you back if you piss them off, that that should have told everybody in the nation exactly what they need to know. Yeah. So that, that basically, our leaders are somewhat scared of the Intel agencies. And kind of cow cow town LA, if you look at our current FBI director, congressional hearings, he answers the questions he wants to and doesn't answer the ones he doesn't want to. Yep. And he knows that there's nothing that's going to be done. So, you know, until we can change our DOJ and change our political system, and get some compassionate and true leadership, you know, in their this thinking in terms of what's best for the American people on enriching themselves, then, you know, we're kind of doomed.

58:19

Yeah, well, well, when you know, yes, yes, politics can be slow to change how, however, things can also happen rapid windfall fashion, you know, even even to see the fact that once again, there is the new bill coming up for for stopping of spying and invasive information on the American public, by intelligence agencies that in and of itself, helped to lay groundwork for these things. You know, and much like, whenever you tune into a congressional UFO, UAP hearing, don't expect them to wheel out a gurney with something underneath a cloth. Don't don't expect them to wheel out a wheelbarrow full of wreckage, you know, what you can expect

is things like grush saying that there has been a multi decade obfuscation of trillions of dollars of money since the 1930s. For reverse engineering of technology. Now, what you have there, whether whether the claims of people seeing bodies are true whether the claims of people's being part of reverse engineering programs are true or not. What you have is somebody going before Congress and saying when I went to ask these questions of these contracting companies, your employees government, they slammed the door in my face. So now you have an actual trail of investigation. And once you follow that trail of dark black money, you can find out who's slamming doors in people's faces, you know, but it took some interested parties to get a group together and go, Okay, hold on, you know, and to start having these open minded discussions. And I think that, you know, yet despite what a lot of people think about folks like AOC, stuff like that she is she is full on forefront, in so many of these groups that are spearheading these things, you know, and I am glad to see bipartisan things coming out, I am glad to see bipartisan things being proffered on all of these disclosure topics, because we have to be willing to have if we aren't willing to have the conversation, that the technology exists, then then yeah, we have, we have no means by which to rein in and control the technology as the people funding the technology. That's, that's kind of silly. Like we Yeah.

1:01:11

And that's kind of that's kind of what we've been asking for for for years is just, you know, congressional hearing, you know, kind of kind of similar to what we've had on UFOs. I mean, trust me, there's plenty of people, the closest we had to it was the bioethics commission, that Obama, you know, call for, you know, after they had apologized to the Guatemalans for being experimented on, which was Hillary Clinton as his State Department person, they had offered that apology, and then they call together a bioethics commission, I actually went and spoke along with several other physicians that were against this technology at that bioethics commission. And at the end of the day, they said that there was no evidence that there was any experimentation by the guy right going on on the public. So you know, and the person that headed up that bioethics Ethics Commission went on to also head up the pin Biden association. So, you know, they're so I mean, I mean, it's, it's gonna take a year, right, just a continuum of good people trying to do the right thing. Yep. And hoping eventually you win over the years that can put it in play in front of Congress.

1:02:28

So in the for, for those of you out there that have been brave enough to tune in tonight, contact your local congressman, tell them your story. Let them know that much like those 1000s of now, government employees that have come forth and said, I have had these symptoms, I have had this, let them know that you as a civilian have had this and that you are concerned because once again, they may not even know that things like this are going on in their backyard much much like human trafficking, things like that targeting of individuals like this, the gang stalking, things like that are things that are happening right there in your backyard people it's it's pretty phenomenal to stop and think about it, it is pretty mind numbing. To stop and think about just in the time that I've known you doctor and and become a part of this community in the way that I have. The stories that I have heard from people, the the emails that I've gotten from people with stories, like like what the gentleman was telling tonight it's it's heart wrenching to me to know how many people out there go through this and are suffering

through this and are not believed by family members what what can they do? What can what can the average Tia out there in the community do to help soften the blow to themselves? What can they do to to help alleviate symptomology doctor?

 1:04:16

Well, you know, one of the things we found in you been instrumental in kind of working with me on that is using bone conduction headphones Aftershokz headphones operating at a particular frequency and using binaural beats does seem to interfere with our ability to keep the brain waves asynchronous and that is a large way of the way this this happens is it's to be quick about it. It's too dissimilar interference waves in the brain come we're creating a another interference way. And if you synchronize, both hemispheres of the brain operate at the same frequency. It seems to make targeting a lot more difficult. In one of the ways we do that is with bone conduction headset. Send binaural beat programs and Chris with curious realm actually does create, and customizes those binaural beat programs for our has done for a number of targeted individuals. And of course, you know, the big thing is really remember your family members do pure value, and they. So, a lot of times, I know you're, a lot of times the targeting is done intentionally to make you think your family as part of it. Most of the time times when I've seen investigations I've done they're not, they are concerned. And I'm certainly concerned that there's there's mental illness, and now we're having a lot of these control shooters that are really concerned kind of be gender

 1:05:54

we're kind of losing you a little bit there, doctor, which is, which is strange that we've had a crystal clear signal until it comes to the point of how do people get help? How do people stop this, that that is the part that's coming through garbled. And it is the fact though of, you know, much like you don't understand why you were targeted, and why these things are happening to you, your family also doesn't understand the changes that you are undergoing. And that onto logic shock is happening to both of you in a totally dissimilar way. You know, and it can be hard for them to empathize with you, in your situation. And it can be hard for you to empathize with them for not Understanding you and your situation. So try to keep that open heart with your family, folks. Remember, like the doctor is saying they they are not there to harm you. Never, never, under any state of mind, under under any state of influence. Never forget what your root voice is ever. The day you're the day your voice starts telling you something other than what you know to be true. Perk up and pay attention and fight that

 1:07:29

and never harm yourself or harm other people. If anything, if anyone is trying to convince you that the way out is to pick up a gun and shoot someplace up or harm others, then that is them trying to control you, that is not the way out. That's not the way to get publicity. That's not the way to get into targeted, that's not the

 1:07:49

way exactly exactly those those are the voices that that are not you that are not you and you

way exactly exactly those those are the voices that that are not you, that are not you and you need to you need to be acutely aware of that, and acutely aware of what your inner voice actively is, you know, and that can be that can be very hard once the haze of that technology hits you. And once it they will because it's that windfall of brain activity is different. It's a different threshold for everybody doctor, you know, much much like any any psychological break is a different threshold for anybody. Same Same thing with the way that this influence works over people. It's a different threshold for everyone. So I want to thank you for your time as always for coming on having these candid conversations in in such an open manner it is it is so important to be able to talk about these things to be able to have the conversation how can t eyes get in touch with you? What is is there a direct email that that you have or something like that set up doctor how can people get in touch with you in a safe manner

 1:09:11

through Facebook and I know a lot of T eyes hate using Facebook but trust me monitoring what's on your computer is the low tech industry. So don't Don't worry yourself about having a Facebook page because that's about worry

 1:09:26

about your computer cookies. Yeah. And

 1:09:29

you as guinea pigs technologies of control on Facebook. Because it's you know by the office is too busy to be inundated with calls there. And there have been some restrictions put on me as far as treating targeted individuals. So the Facebook is the best way to get a hold of me so

 1:09:49

absolutely. Well. Doctor, I want to thank you for your time as always with this hugely important topic. This is this is one that is one of our crusade Kids at this show I am I am bound and determined to shout this from the mountaintop for as long as I can my friend because I think the work of people like yourself people like the work of Robert Duncan things like that are hugely important to to getting the truth out there about this. So thank you so much for your time as always in as well for your friendship. And always a pleasure being on Chris All right, take care of my friend I'll share links everything else I'll let you go I know you have practice in the morning for work everything else so take care take care of that beautiful baby of yours.

 1:10:43

All right, thanks.

 1:10:44

All right take care of well while you are online everybody checking out all of the amazing work of Dr. John Hall his his books are of course available over in the curious realm store if you go to curious around.com forward slash store right down there toward the bottom of of the store you can find his books you can find all the books from all of our guests. There they are right there guinea pigs. If you click it, it'll take you right to the Amazon link. All that kind of good stuff through our affiliate ship. So stop on by check all of that out. Like, subscribe, follow, but don't go anywhere whatever you do while you're going to the website and checking it out. Don't forget that after commercial break we will be joined by Dennis stone, the owner of America's Stonehenge we will be talking about one of the oldest archaeological sites in America what it means what what some of the alignments might mean what what the structures might be used for so many other things with Dennis stone owner of America's Stonehenge right after this folks Well hello everybody and welcome back from that commercial break thank you so much to all of our sponsors especially true him science true him science is my choice for CBD A should be yours as well. They are hands down the best CBD that I have found on the market folks. Stop on by check them out. True him science.com forward slash or I'm sorry, Joe true him science.com use the code. Curious seven to save 7% off of your entire cart of \$50 or more amazing stuff there. Our guest in this segment is the awesome Dennis stone. He is the owner of America's Stonehenge one of the one of the many stone ruins that are scattered around the New England area. And one of them. That goes back to pre Columbian times. I had a chance to visit there shortly before I guess it was like September. And it was it was epic. I've had Dennis on numerous times. And as I told them every time like I lived right up the road from his site, passed by it. I don't know how many times and never went to it. I am highly regretted of that. Now that I have been there and seen it, it is such a magnificent location. Welcome back to the show. denistone How are you doing my friend?

1:13:26

I'm doing great. Chris, thank you so much for having me on again. And again, I'd like to congratulate you on your 100th show this year. Yeah.

1:13:35

I appreciate that. It you know, we try hard to keep things going regularly and to make sure that we are never ever providing repeat content. So the fact that we have guests that come back like you and you like yourself that come back again and again. We absolutely love it. It's great. All it does is further research. And allow us to see what updates have been happening, new things that people have found out in their research and this location, America's Stonehenge. You have actively had in your family since since you were a kid.

1:14:17

That's right, yeah, it goes back to the 1950s. In two years, we'll be celebrating celebrating the 70th year there. My dad first heard about this was on a radio show just like we're doing right now. It was a big station out of Boston it was on a Friday night. And he's just listening to the show was called Yankee arms and the host was for me and just like you altered whole blackinton and he did the show we syndicated besides a big station was syndicated around doing one and a couple other stations. And the That evening the whole subject was about this

site. So that was in 1955 and my dad opened it up in 1958. So this year we just celebrated our 65th year being open to the public if you're here for that It is so wonderful to meet you and see your family too, you know, and we did that. We did another little episode, I think in front of the watch house.

1:15:06

Yeah, it was it was at the head of the snake which is I was I was actively talking with someone this last weekend Jason quit about about his work into symbology and things like that. And the snake was a huge one, specifically serpent mounds and their angles, things like that. And I directed him to you I was a you, you need to make sure and get a hold of Dennis stone with this because, as opposed to an earthen mound, which are found frequently this is this is a huge rock formation in the shape of a snake on your property.

1:15:46

Yeah, we didn't know about it until 2016, I thought my first what I thought look like a snake and a head pointing to and it was a short stone wall about 27 feet length. And at one end, it was a little bit high, it had this rock like a boulder. And it tapered down to a flat stone. And I'm like looking at it was it a rigid bedrock, it was straight, it was linear. And as I looked at it, I thought to myself, am I looking at a snake and I had never, ever thought of the stone walls looking like snakes. And I hadn't heard of that before. So I didn't have a frame of reference for it. Then I told a few friends and researchers and staff people and then I thought a couple other walls up there that we've been going by for decades and I looking at her look closer and go like Ha You know this one looks like perhaps another serpent it seems to have been had a body and tail. In what am I found was a great big S shaped serpent about 140 feet long with a kind of a triangular bolt ahead. And then it goes into big sweeping s and the spring of 2016. And Hardy kind of identified that one is Scott Walters, and I own Butler from England who's been on his show America on Earth. And other TV shows too. They're all over which Scott was kind of an entourage of probably about I'd say about 1520 people and we were touring the site, and I took them off the show specifically what I thought could be circuit walls. And they all looked at him and said, Wow, you might be onto something. It wasn't a to a meeting in Groton, Connecticut. And Connecticut is loaded with stone structures all over Connecticut. And that a conference down there. The New England antiquities Research Association spring meeting, I believe it was. And as guest speaker got up and he spoke about a town called North Stonington, Connecticut. And again, we knew Connecticut had structures all over the state, but it never knew North Stonington had even go instructor. But the gentleman's name is Mark star. He goes by Michael mSTAR. He wrote the book ceremonial stone work that year 2016. But before he spoke, I'm at one of the authors tables, I'm looking at all these books, and I pick up his book kind of interesting and look at the back cover, Twitter and 70 pictures, 1000 structures, 25 categories of structures, I said one must be talking about the whole northeast, you know, because they're all over the Northeast. And as look a little closer, I realized it's just a town in North Stonington. All of these structures are in a 35,000 acre town of North Stonington. Connecticut, one of the categories as I was flipping through it on like, they were circuit walls, and oh my oh my god any lists something like 400 of them in that one town. And they're straight or linear? They're curvilinear. Sometimes you have a 90 degree head bent or tail. And somewhere for like, the curved one I mentioned curvilinear, if you will. And the other type, we found that our site was the one you mentioned at the beginning kind of the big boulder where we did our interview.

And that one I think might have been my I mean, we've been walking by the watch House since we opened and Mr. Goodwin, the first researcher was there a 1936 visiting the site. And in 37, you purchased 20 acres of the site and began researching studying, photographing, clearing excavating. And he did a little bit of work on the watch house so he knew was there. But nobody ever saw the serpentine shape to it. If you look at it today, and that's the I think that's the shape when you're looking at you we get up instead early photograph because the trees are thinner there. Now, since we did a forestry project, but the wall goes from the right of the picture goes off to the left, it goes into the distance to the right. And if you could, I don't think you can do it. But if you could expand that, you know, it actually goes way off to the left again and it's in the far distance and insert another older like a round bolt or tail. Oh you can zoom in a little bit. Yeah, you can see it goes off to the left and it's kind of hard to see the very end of it because it's so far out there in the woods with the trees but it goes off you have 140 feet and it's a great big sweeping yes farmers walls started the 1700s 300 years of wall building but they're fairly linear with some exceptions.

1:19:53

They're made to mark property lines property lines, go curve like a river like that.

1:19:59

You Back and Forth would not make sense. Yeah, unless you're following a river but that's all bedrock there, you know, it's sitting on. Yeah, so farmers are built something like today and 40,000 miles of walls into England, they say that's the highest number of walls, miles of walls anywhere in the world in the New England area. And I didn't, I didn't realize that until more recently, you know, but farmers walls are pretty typical, like I say, marking boundaries, field clearing stock fences. Sometimes they serve all three purposes, usually fairly straight. And you can find exceptions to you know, of course, oh, but these walls do with these pigs sweeping things. Some actually loop around like the watch House 120 550 seat counterclockwise, and it comes back in front of its older head or face. And it does a hump. It did it does a 93 to bend to a pointy tail. And that pointy tail should is stuck out to all of us over the years. It is so obvious now you look at it all look at that. It's amazing. In its in front of its face in an order Boris, ancient Egyptian Greek in et Cie, that Native American artwork where a snake kind of biting its tail kind of in either the tails in its mouth, or it's next to his mouth that that is more rare. But I was, as you mentioned, the head of the snake is the boldo with the tail right in front of it could represent the horse. So that might indicate wisdom. It could be wholesomeness, it could be like infinity, you know, but also a sharpened can be healing or going to medical staff. There's two steaks on it. But it's in the Bible at St. Patty, it's Adam and Eve. It's all over the world, the Egyptians had it. But it could be it's protecting the 15 acres of the main site, you know, wraps right around? What could it be considered the sacred area of the that's a possibility? If we could talk to the builders, we know for sure, but that's what it looks like. Well, and

1:21:54

that that is one of the most fascinating things is the builders as as of yet unknown. It's not like there's an incredible amount of settlement there. For me, there there was at one point, a small encampment toward the front of the property where everybody parks, things like that. That

was obviously in Campton by the people who built the place. But aside from that, it's not like it was occupied. It's not like you have it's not like you have found you know, piles of piles of church, let's say from people napping, Flint. You haven't found piles of animal bones from sacrifice or hunting, you know, things things like that.

1:22:44

Right household goods and they in in the archaeologists, they use the word Minoan. It's like a trash pit, like they were describing, you know, and that and that's not what we find there. It's it's fairly clean, psychologically, we've done 85 years of archaeological work on this site. But if he took all the shovel, test pits, excavations and put them all together, it would be maybe about an acre out of the 106 acres of land there, you know. So probably just under a percent of the hilltops actually been excavated, although they did a lot of work. And it is quite a bit of, you know, time to do all of that excavation juicy, fairly, pretty slow. And you might find a bidding or something like that, but we just don't find that than the other sites in the Northeast a number over 800 in North Stonington is considered a site and it can be just a chamber like next door town is Windham New Hampshire has a chamber we consider that a site to sure, but um, yeah, I don't think it's a habitat site. I think it's a place of worship, probably a ceremonial site that included the astronomical alignments because we have something like 57 alignments with the sun, moon and stars. And that brings in the circuit walls again to the circuit walls might be inspired, perhaps by the constellation Draco. In the Northern Hemisphere and the Southern Hemisphere, you have other constellations, obviously. And you know, I did visit the great Serpent Mound in Ohio. We were there in June, we traveled up from Georgia. We had seen the Edo amounts in Georgia this year. Then we went to Ohio and saw the site mound and then circuit model. We've got my son out there. My son's an engineer at Raytheon, but he's also a rally racecar driver, and they happen to have a race going on that we could chill a coffee. So he made his whole team. So I'm actually flew in from New Hampshire, whatever, into Ohio. And we met him at the Serpent Mound. And so it's a really kind of a neat thing to help my son with his team meet us right at the great Serpent Mound in Ohio. And that's amazing. And it's about 1300 50 feet long. It's built on I think, what's described as a stone foundation, if you will, but it is an earth than an earth and serpent. Always be in 20 550 feet is twice as long from what we understand our particular serpent Today, so it could be one of the biggest serpent effigies, you know, either stone earth or whatever it is stone in this case, maybe anywhere unless we find out next year. Somebody's got one that's, you know, 3000 feet long, which is very possible somewhere. My friend, we're we're Wheatley from England. You know, she's really big on dowsing. She's an archaeologist. Her dad did visit us back 40 years ago and she goes to Sedona she goes out to LA she's all she just came back from Egypt and Malta. She does these tours and she's trying to work her schedule into coming to us site and she's sending people to our site. Fact one of them came and then she met her over in Malta, you know, like the week after, but she's been sending me pictures of England and we've been here many times to England and Scotland, Wales. But she sent me pictures of circuit walls in England, and I didn't know they existed. I knew Scott Walters had went up in Scotland and he did every one of his episodes about the serpents, but they're in England. I'm like, wow. And that's that I circuit walls. We think today. You know, they're all over the northeast, as you mentioned, they're in Kentucky and Marchetti my friend. And you know, Mark, he sends me you know, Marchetti, he's great guy. He's in West Virginia, and he's been sending me stuff for years. You sent me a picture of one in Kentucky, or circuit wall. It is very remote, very difficult to find a woman wrote it up. She was an archaeologist, I believe in 1990. And it has a big, wide open mouth. I mean, the wall, you know, it has a certain body with its great big two walls that come out like a mouth kind of like the great ship of mine in Ohio, except that's Earth again. And I have one of those

five what we call the door. Well, I think you look at the way it starts inside the main site. It goes true south and we've always called it the true south. Well, there's a chain link fence that Mr. Goodwin put up 85 years ago, or 86 years ago around the main site that you saw that green fence is still in remarkable shape. They knew how to make things happen. There's a folder right there. And I thought after fighting that maybe we knew the wall was if it decided maybe it's a circuit wall was fit its prey. Or maybe it's pregnant in some of these walls, not only here but in Connecticut have a the body gets wider, like in the middle kind of ish. And then it goes back to its regular, you know, with some people suggest that's representing either you know what ate its prey or pregnant snake. Yeah, and we have that too. But it has this big wide mouth. And it reminds me that when it Kentucky, but we found it in Winnipeg, Canada, and Parks Canada is working on this trip, it was up there. We had a couple that visited the woman's sister moved to New Hampshire, so they're going to come back again and visit us quite often. But they were down late summer. And then when she was heading back, I think they drove back she was sending me pitches for a Sherpa walls. And I'm like, it's the same thing way up in Winnipeg. They're in Alabama. And they're in Mount Shasta, this town called weed. And I got 110 pictures of circuit walls. And again, they look like what we have out here in the east, you know, in the northeast, so it could be an American Stonewall serpent thing going on? Oh,

 1:27:57

sure. Absolutely. I mean, the symbology. Behind that is huge, especially whenever you start looking at, once again, the astronomical alignments of this location. The I've got the messed up right now, of just a couple of the alignments, even when I was there, I showed you a lunar alignment that wasn't on here and took a picture of it for you. Where I were like the day before the moon would have arisen over over the stone. And exactly what I find interesting is specifically not just the rock wall, and not just the caves and their construction, but the difference between the the rocks that are used for pointing location. And the rocks that are used to catch the sun are different and made up differ I mean, I remember when I was there you and even even the altar stone things like that. When I was there, you allowed me to take a couple of the rocks and the reason I did was because they they're a different color than the rest of the rocks. And they specifically have like flecks inside of it of mica all kinds of things like I'm damn sure it's the Granite State

 1:29:26

is the greatest state. Yeah,

 1:29:28

but this is different than your typical average granite. It is far far shinier. Far, not even like shit coins wise, anything like that, like what you would normally get from granite, where there's the shimmering from mica, that kind of stuff like when this hits daylight. It shines in a different way.

 1:29:51

Yeah yeah I wonder if that was an attraction to that hill The Hill has some features about it

Yeah, yeah. I wonder if that was an attraction to that film. The film has some features about it that I think would have been made it an attractive Hill to set up this kind of site on top of you know, it does have an earthquake fault line going in, it splits the hill going east to west. It splits the hill right in half. And I was talking to Maria about that. And in Wales to to England, there's about 700 Stone, ancient stone circles, and they're built on or with a mile and a half. She said of the fault lines. I noticed about the equal number in Scotland because I've been up there but I don't know if they're on fault lines up there. That's something I've been trying to find out. But Machu Picchu is built on a fault line too. And they say that was all intentional. You know, and we've been to Delphi in Greece. And it was a fault because some of the guests came out they affected the people that were site. What do you call them? The Oracle, the actual

1:30:45

Oracle's were? Often natural gas.

1:30:52

Yeah, really? I think it did. I didn't have that happen to when I was there. But yeah, you got a lot of different pitches. See, that's the East West chamber and to me that looks it runs through East and West in it runs about 30 feet ish. Not quite, but it's like the ones I've seen in France called Galia gallery, graves Norris run east and west, and the 20 to 60 feet length there is used as tos. And they're in Holland, they call them the Giants bed, the houden been, and they're also in North East, Northwest Ireland, we went all over Ireland, we didn't get to the northwest part, we saw so many megalithic sites. But I didn't get to see the gallery curious, I believe in Spain too. But that's a nice photograph looking south that's looking south from the astronomical platform kind of, well, maybe from the ramp area, but it's looking south you can see the table and beyond the table, which is about, you know, four and a half tonnes, it's about just under six by about nine feet in length, and it's just on four legs and just beyond that as a vertical slab. It's one of the monoliths it just beyond that is the entrance to the biggest chamber we call the Oracle chamber. It's hidden behind that stone actually. And in deep work, if you could look to the left, which you can in this picture, there's another one of these upright monoliths, so there are two panelists on either side of the table. I used to refer to them as Sentinel stones, kind of Guardians stones, and one of them's a little bit more narrower, if you will, and the other one's kind of wider. And I know we've been to England in the West Kennet Avenue not too far from Stonehenge and other ancient megalithic site called the West Kennet Avenue. They had the female and male represented by upright stones, and the wider ones were the female, I believe the more narrow ones with a male symbolic kind of symbolism, I think, you know, male female duality, that kind of thing. So it's a possibility that the table as you're looking at, you can see a stone on the far side of the table turn up on the bedrock. You can see like a slab down there just a little bit. Yeah, right there. Perfect. That stone we believe is a roof slab, another slab that blocks on top of the chamber. If you can scroll up on the picture now to the right, a little bit. Yeah, go right up here to the right, you see the variety. You can see a roof slab on the top right, yes, this stone wiggly fits right into that little notch right there. The heavier part of the stone would have been on the right on the ramp, kind of cantilever it with a very thin pot you can't see hidden by the table would actually fit into that little slot. Dr. David Stuart Smith, who spent 40 years with us he was a stonemason, he documented historical anthropology, theology. He spent the 70s from 72 to 77, working for what is today called English Heritage. He was in Scotland in England doing repairs on megalithic and medieval structures. He became a master stonemason over there. And he's from Connecticut. So when he came back home, around 78,

he became aware that these sites exist in the northeast, he was quite shocked. He was not only happily surprised, but he was beside himself, because I've been spending seven years over there. And he learned so much over there. And it was called the ancient monuments, whatever it was called. Now it's English Heritage, you know. And so, he he was he has an eye for that kind of thing he can tell with these kinds of stones belong. Not I'm sure not perfectly we'll never really know. But he was very, very good at that, you know, looking at the size, the size or shape. You also found out that these slabs, whether it's a table millennialist, roof slabs, any of these types of stones were all taken off the bedrock. They were actually struck and you were actually shaped, as you mentioned earlier, like making an arrowhead when you do the napping, but it was on a grand scale in our Dr. Gary who my state archaeologist 40 years ago, mainstream kind of conventional list, didn't know about stone ruins. You know, that was part of his learning, looking at our heads and points or maybe colonial stuff. These sites didn't exist in his world. But he actually opened his mind up to join us back around 1980. And he did three projects and he worked with Dr. David Stuart Smith on it. He was oolitic specialists you know how they made stone tools like Native Americans in the ancient past. And he said you We're big slabs here we're shaped using stone age technology in the same manner, as if somebody was making a arrowhead and a stone axe or stone hole or stone sphere. It's the same technology. It's not it's not metal age technology, it's Stone Age and it's napping or pressure flaking or percussion, flaking. You know, we have 34 slabs, like the table, not exactly in that shape about the size of that at all for the hilltop is 34. But we got now and they're all been raised off the bedrock, propped up with another stone, a small stone, in the edge of them, you can see where they were actually were all dimpled where they were striking it and doing percussion flaking the dress or shape it and they abandon this whole project in an ad to we do have one and that's when Dr. Kerry human got on that project. And then we kept finding more of them in just in the last couple years, you probably started 15 more. And it was like last year the before it suddenly dawned on me it was like duh, why didn't I I think he's people had a much grander plan for the site with all these massive slabs to be brought up. Some of them have 1000 feet for the main site. Maybe they had a much bigger plan for this place. And then it's like, well, why did they stop? You know what happened to these people? But no, February is the question you know,

 1:36:10

I am now granted the the table that we're looking at the quote unquote sacrificial table, as its as it's been dubbed. So many shows things like that. I am a big believer that your your site was used more than likely for initiation of some sort. Not just with the Archaeoastronomy alignments that it has, but but with the alignments of caves. And things like the man made caves, the caverns, the way that they connect in different chambers. Even even underneath by and the main reason I think this is because in Manila, ancient Greece, things like that. They were even in Rome, they were known to use chambers adjacent or underneath their altars to, to have the words of the God come out from underneath the altar before the sacrifice happened. Things like that.

 1:37:18

Right. Right. Exactly. Yeah.

 1:37:21

And I you have a chamber precisely like that. Under the table.

 1:37:28

Yeah, it's just sort of left to the table. And it's actually kind of hidden to you don't really know it's there. You know? Yeah. Yeah.

 1:37:33

I mean, this whole little wall right here is a chamber.

 1:37:39

Yeah. And so it's almost 30 feet long. Yeah. So it's 30 feet north and south, you know, yeah, actually, you

 1:37:44

know, pretty good size the window is, and once again, I would love to come and do acoustic measurements, things like that in there,

 1:37:53

too. It's funny, you said that. That's funny. You say that Scott Walters when he did the show. He's been back many times since then, when he was doing the show you guys this? I think acoustic archaeology because you got to do a little bit more here. Because just like the structure itself seems to be acoustical you know, but also,

 1:38:08

the positioning of the large slabs to the table. To me, maybe ring out. Acoustic is though, I think so whoever's laying on the table can hear a message being spoken to that rock.

 1:38:24

I think they'd been testing Stonehenge for that I saw a show on about that. And it was pretty phenomenal. Yeah.

 1:38:29

And there are numerous sites like that. All over the world where you know, even even when you get to you were saying Delhi that kind of stuff. Epidaurus you know, where, where you

you get to you were saying Delphi, that kind of stuff. Epidaurus you know, where, where you can strike a match down at the bottom of the theater and hear it like it's next to you at the theater? That's

1:38:50

it. That's pretty amazing. Yeah,

1:38:52

they had amazing knowledge of acoustics, tennis, and especially for things like this. I'm curious, from the top of the table looking up. Have you ever done any Archeo astronomic alignment to see if you know, like what constellation would be in the sky at these points of the year where the sun is over? Where the sun is over the site stones that you have? I

1:39:23

think what we did study on 1999, I had a retired Harvard, us a Professor of the Graduate School of Architecture at Howard University really nice guy, he was so much into the design of our site. And also the other thing is water table. So he did a lot with the United States Geological service. So I went on with him a couple times on the road to talk to some of the people in the USGS in New Hampshire. This one covers from mine to about what we see a water like the rivers and everything back 10,000 years ago. They really don't have any precise information. They have more general stuff, but looks like our place was almost on a peninsula. For one thing, but the architecture of the site was his other big thing. And he actually, we went to Greece for our honeymoon. And he designed the, the, what was it over there we saw the building to he actually has his name on the building. And also, I think over an Iraqi, US school or university, he actually designed that. So he, he was pretty well known in the architectural world, you know, and he just passed away not too long ago, he lived in Massachusetts, but we used to go in the Oracle chamber and look up the chimney, and try to look at stars because they do pass overhead, obviously, the zenith stars, you know, the sun will never really go vertical, because we're, you know, we're 43 degree latitude. But the stars, and we were looking at that back, I would say, 2019 99, you know, I was still working at the airline. So I was kind of trying to balance all this stuff, too, at the same time, but we did go up there at night. And we also had to figure out that the Earth's tilt has changed a little bit in 4000 years so we had to take that into account. That work was never complete. Yeah, it was never completed, said we should do more with that. Well, you know, when

1:41:01

and honestly, like I said, specifically on the days of the solstice and equinox alignments that you have, where the sun and the moon rise over these stones, to see precisely which constellations are directly above. Right, that I think that would be more of an initiation table where the Initiate lays down, you know, something like that. And the story is being told once again, through the stars overhead.

1:41:33

Yeah, even I think even more modern day initiations. I'm trying to think of some of the groups I'm not sure about the Masons, but there is the skull and bones, I think, at Yale, and they do things like that with their initiates, you know, and it's like a whole ceremony, and it's really emotional and everything, you know, you might be onto something with that, too. I mean, it's a really good talk, because we always, you know, that to say it was ceremonial, but we've also had people talk about maybe it was a place of initiation of training of learning, you know, and not just astronomy, as you mentioned, but other things, too. There is a geometry to the site. Yeah, and I don't think you have that map. I don't know if he ever sent it to you. But my dad did one and another researcher did one and they went from specific points all around the property, like a standing stone to another one to another one, you come up with equal lateral isosceles, Pythagorean triangles, it it can have a few of them, that will be coincidental. So but when you have repeating patterns, it seems to maybe not be a coincidence, you know, you have to be careful about that. I took that in college. Statistics can prop probability but it looks like there's repeating pattern of that all over the hilltop. So that'd be kind of mathematical. And then we have the astronomical, and then you have the architecture the site to that's a beautiful one of the I believe it's a winter solstice sunset. And that's coming up. She was in a month, you know, it's going to be happening. It will be having a celebration for that in a drumming circle that day. That was first cleared out in 1965. And it was because of the book by Gerald Hopkins. He was English. He was at Boston University and Harvard Smithsonian Center for Astro astrophysics in Cambridge, Mass. And he wrote the book Stonehedge decoded, and then he wrote a couple other books. And that book, triggered a TV show on CBS, the mystery of Stonehenge and I have seen that movie twice. I haven't seen it since the 70s. But it first aired in 65. And people like my dad, the other researchers, people from the New England antiquities Research Association, they saw that they said, You know, I wonder if the Standing Stones surrounding the main site, these monoliths have a meaning astronomically. So that's why they began clearing in 1965 in a gentleman that did actually became a nuclear engineer and He's a gentleman that installed the reactors on the Nimitz, you know, the Tick Tack UFO is where to put the reactors in 69 and 70. And he came up in his Buckeye triumph for the winter solstice of 1970. Pocket is mom and dad's house. We met him it was about a over footage now. He had built a wooden snowmobile as a kid, he built a paddle wheel boat when he was a kid is very, very, very amazing guy. I was just talking to him yesterday. He actually ended up in the nuclear industry all over the world in France, South Africa, up in Alaska, he ended up finishing up his career. When Fukushima went off. He was just about to head back to Charlotte, North Carolina for Westinghouse, I believe it was and they moved him to Tokyo to work on the mess over there. And he ended up being the last person on the five persons. So he had these bookends of the Nimitz and Fukushima. But he's still very interested in the site. He worked here for years from 63 when he was a kid up to became a manager in 68. And then he got in to working for the IANA on an image, you know, he took the first photograph I found out two years ago, he said Dennis I have two pitches from 1967 of the sun setting on that stone. I said I thought it was nice 70 Because that's when I went down with my dad, my neighbor and he had the snowmobile, he broke the trail we walked up we saw the first clear pitches were with us, but he took it as the cirrus clouds with a cirrus cloud, you could just see like, a bright spot setting on that stone. But he cleared that out using first and accidentally borrowed a neighbor who's a doctor he borrowed is changed. I went up there and they cleared seven about 800 feet of trees to actually see that study and 60 thought those are also something we discovered in the last since 2016. I started finding not only serpent walls, but I started finding what we call windows. Yeah, yeah. When I get that you I think I showed you a couple of those. You're up there. Yep.

1:45:39

And there has

1:45:44

no copy. I'm sorry, Chris. I mean to step on it, that has a couple cobbles in it. Those stones inside that I didn't move them take them out, but I just took my finger and touch them. They're all loose. They're just sitting. We have to like the two windows that have cobbles. You will feel like little offerings. This little cobbles. I have no idea but they're not, you know, holding the clinical stone up. Today we have I think 25 windows. Maria Wheatley again in in England sent me pictures after I did a couple podcasts because down the line afterwards. Domore England, she sends me pictures of her window. She goes it called Soho. So this was the spirits to go through. That's their interpretation today. Interesting. And that's that's about the press when I found and actually that when when you go to another pitcher that has a stone shutter that actually fits inside normally, we tell our visitors and all our staff, please don't touch anything. Don't move anything. But one of my assistant archaeologists, he he's a stonemason with a boulder for that. And he's been doing it for 30 something years. He said, Dennis, can I take the stone he has? Great, I used to work with David Stuart Smith, can I pick it up and put it inside that opening? Because I think you have a stone shutter here. So we said well, okay, we'll do that for research. So we removed the capillary, we stuck it inside it perfectly, then we put it back into the earth and went about eight inches into the earth standing up vertically, we have found other stone shutters, some of them were stacked up horizontally. In some of these stone windows, or this four of them next to each other, we have two examples of that. And then there's others just by themselves, but not Stonington. Connecticut, when I again, I open that book up in 2017, I looked at it like there's another category, it's Windows, they have the same thing like that down in North Stonington in the wall. So it's not unusual here. But what a surprise to find these things. You know, after decades of being here, never noticing them well.

1:47:34

And using those specifically Dennis. People may look at the image on screen right now and be like God, so wall in the middle of the woods. Those are not incredibly old trees. Right? There they are maybe 100 years old, something like that. So at one point, this was wide open field. So it was Yeah, to think of those as peep sights that you would you would cite a mountain point off in the distance, or something like that to find a cardinal direction, or to cite a star coming up over the horizon at certain times a year. That is one of the things that I've mentioned specifically about the the Bee Cave structures that are the beehive structures that are there the the little buildings is are they aligned specifically to rising of constellations, things like that. It seems as though it would be a perfect spot for citing, citing stars, things like that, as a backyard astronomer, myself. I'm even building a small shade that I can pop up on my on my fence whenever I'm doing it to block out my neighbor's lights.

1:48:57

Right. Yeah, that's the dark sky because even though

 1:49:01

you're in a dark location, yeah, if you're trying to focus specifically on one point, if the moon's on the side of us something like that, it can be hard to see stars on the horizon.

 1:49:14

You're right on the money about that. And the hilltop is all bedrock with a very thin layer of soil. And David Stuart Smith mentioned that, you know, and we kind of aware of it, but he really put it into good words and really understandable because basically, it's windblown particles and vegetation decay. It takes about 125 years in in New Hampshire in New England for an inch of soil to accumulate from windblown solar particles just coming in there. So everything on that hilltop, including if you look at that structure, right here, it's sitting on bedrock, the stone walls, they cover the entire 110 acres, including the serpentine walls. When they built this site, I think they had very little soil up there and then very slowly the soil has accumulated and then the force and the vegetation came in, and then it became almost a jungle up there. So any astronomic alignments they could have seen many, many years later the trees the forest completely covered not only you couldn't see the horizon, as you mentioned, but you can even see the some of the structures they were buried in the woods like a jungle down in like Mexico. And, and that's why those windows haven't been found until the last few years. It was just, you're just covered with brush trees. And we had a forestry project we did two years during the winter are starting in 2019 to 2021, we finally finished it up and they did the 110 acres they send all the hilltop they did it to remove dead dying diseased, damaged trees. They also took out any any kind of know what am I trying to say? Take before the test shouldn't be there anyway, you don't I mean, it's

 1:50:49

a non native invasive foliage

 1:50:52

of the day. So that's what I'm looking for. I'm sorry. But he opened up all the alignments. And now we have literal alignments that we never opened up to lunar major alignments were never opened up because we started the project at 65. So all the way up to now we just basically kind of finished it. I suppose we'll never be done with that. But now you can kind of see the horizon pretty quick

 1:51:11

because of number of alignments, man. Yeah, yeah, those

 1:51:15

who said that some of the 57. And most of those are what we call type one, it's actually

watching a Sun Moon or star rise or setting like a like a stone, or you could have what if he, you know, like would hinge over in England also with Cahokia and Illinois. But I was just shown and you have to have a back sight and the foresight backside is the one closest to where you stand, the foresight is the one in the district you're looking at. And then you see the sun behind it moon or whatever. Well, we have that we have the back sight and foresight, otherwise, you don't have an alignment. And we also have the other type, which is called some people call type two, it's an illumination and that society that watch, the serpent hit the chamber, and that's when the light goes in and causes a shadow and light effects so that the light take to alignment. We have at least one of those. There's a Dear Colleague inside the Oracle chamber there's a window there. It's now the exit and I know you walk through there with me. We might use the app that's that's the one in the Watch house. Yeah, we could never see it because the trees going to our neighbor's property we're blocking it could never see it even with the leaves off the trees. So when we did the forestry thing I elation foresters name was Brian, I said, Brian, you have to open this as far as you can to the neighbor's property, because I want the sunlight to come into this chamber, because the Iraq was written about even enhanced holds his book in 1982, long before Columbus all about our site, because had been coming up since 1970, doing different experiences bringing up different psychics to our site. So 92 He wrote the book on Columbus's 500th year anniversary. And Bob Ibrahim quite actually wrote the foreword, and she's talking about that in the foreword of the book, that stone right did a quartzite stone. And she had her own interpretation of it, you know. And then one of our other staff member, she was a high school Spanish teacher, too. She wrote a book in 1996. It was first souvenir book we did, we just did my daughter. And I just did an update did our own just recently in the last couple years. But she talks about that in 1986. And so what we found out my friend Haley, who you interviewed throughout Las Vegas last week, she did, she did a PowerPoint presentation. She was here in 2020. And she had Sunseeker in her phone, she got into the back of the chamber, the trees had not been cleared by then. And she goes, if you're here and you're standing here in the equinox, sunrise, I think it's gonna get illuminated around nine ish in the morning, roughly, the next year, the trees had already been cleared out, and went back here and the equinox and basically what you see there, that picture was taken about eight o'clock, and the one you showed before that was at 830. So that shadow and light actually framed the top of the stone. And then it morphs into what looks like a head with an index finger pointing back at it. Our interpretation of that is good

1:53:58

to me, it looks like a hands down stretched.

1:54:03

The shadow looks pretty cool, too. It depends on what you're looking at either the shadow or the light part of it. But the fact that it frames the top of the shape of that stone is pretty cool. And then 30 minutes later at 8:30am in the morning, it actually turned into it looks like a hand with an index finger pointing back at ya in our interpretation today I've been to New Grange in Ireland is that this might represent that chamber might represent a womb and what it is is a son, the race, the fertilization, the egg, and this illumination actually is you know, it's about fertility and it's in the spring equinox it but we found out this year, three years later, I'm standing there at 730 because we have a couple other alignments earlier in the morning on the equinox, a big eight foot slab that fell down the sunrises over that stone was standing and then it's one year the Oracle chamber and that's just about 20 minutes later or so. And then we go

down there and watch the three Word Equinox events solar event if you will. And I'm talking to a lady with my back to the chamber, kind of like when you and I were interviewing there, yeah, but I turned it, but I was sitting at that time, but I was standing next to this. And I just have to turn around while we were talking and I looked into the chamber at 730. I'd never done that before. And I don't know if you have that picture. But the bottom of the stone has a perfect shadow, like framing it so frames it at the bottom at 730 30 minutes later, it goes to the top of that what could be an egg, perhaps it frames it perfectly. And then at 831 hour after the beginning of this illumination looks like a hand again with the index finger pointing back maybe at this fertilized egg. And that may be you know, crazy, it might be incorrect. But we've been through quite a few sites around the world. And even at Chaco Canyon on the equinox, there's an illumination, it's not this the point the you know, they have the dagger for the summer solstice, the two daggers for the winter solstice at Chaco Canyon in New Mexico, which had been two, we haven't been up on the Butte to see that it's restricted. But on the equinox, the light hits a serpent that's it, it splits the serpent with the shadow light right down the middle of the equinox. Remember, we're talking about the head of a serpent, the womb next to it, and then this illumination, so that chamber has a lot of things going and that boulder by the way, is a February 1 Cross quarter day, the ancient Celts called the Invoke candle mission. Groundhogs Day today is around that time, it's a mid season, the first hump in that body behind it is November 1, it's called solid by the ancient Celts. It's the All Saints Day today, the day after Halloween. And that hump actually is where the sun will rise on that. So there's a lot of stuff going on with our watch House, including two bones that were looked at it to Smithsonian in 1968 and identified as bison bison by two physical anthropologists in 1868. Now it takes a bison bone doing in that chamber I have now

1:56:58

the quartzite light and shadow as we were talking image popped into my head. And the concept of as above, so below, popped into my head, which, which is very much an initiation phrase, things like that the whole concept of what is in the heavens is reflected here on Earth, things like that.

1:57:24

That's a funny twist. That's the name of my PowerPoint presentation. Oh though, I'm gonna update it now. But they put that on night 2019 I started doing it using their PowerPoint. And that was the kind of the theme as above so below via

1:57:37

Egyptian letters D. There, if you look at the hieroglyphs for the letter D in the Egyptian alphabet, the outstretched hand. Oh, yeah, looks strikingly familiar to the hand that you have here at the bottom of the screen, and the image inside of there. And then once again, the outstretched palm of the shadow on top of it. So yeah, the lit area, the shadow area, both of them being a hand both of them representing the Yin the Yang. Yin and Yang. Yeah, just it as as you were talking, and it never even dawned on me. Hands up above it in shadow as well. And

the whole concept of those two being tied together. But when I find that when I saw saw the hand on the bottom, that's what I was like, that looks like the letter D in hieroglyphics. That is that is wild, man. It's pretty cool. Yeah, like it was the letter D. So just just

1:58:46

cater, there's a keyboard in Oklahoma called the new Escape and Gloria Filey and nearer and other people working on that, but actually, part of the the illumination there's five caves, and one of them the is a dangling sun, and they say this a lot of Egyptian and NuBus and all that a lot of that in there. And there's a sun but it's also on the side of it like a dangling hammer sun and then during the course of that illumination, it looks like a hand with a big thumb stick out and that's in a shadow kind of a shadow thumb Yeah, the light around the thumb just the reverse of But anyway, he goes into the actually goes into the dangling sun in momentarily it fits perfectly in there during I believe was the equinox, Equinox to sunrise. Michael, that's the equinox. In Colorado, there's two caves the Pathfinder in the crack cave, and then we talked about the Chaco and also the Mojave North cave in California, which I haven't been to but those are all Equinox ruminations on the same morning we're having ours you could actually hop on a plane or maybe we should do a Facebook from those places. They have those going on the same time or a little bit later in the day, obviously a different timezone but it took an eater cuckoo clouds going down the staircase. Now he wants staircases for the shadow and light on the anok so there's a serpent going on there. Serpent head, the womb. So there's a serpentine Equinox going on, you know, across the US and going into Mexico, you know, you wonder, yep. You know, how can I be just a coincidence? I don't know, you know? Well,

2:00:16

and specifically when you start getting into the age of this site, and of course, the, the rock cannot be aged. However, when you start getting into local tails of the site, when you start getting into the history of the site, when you start getting into the the local settlement settlement of the site, by Anglos. And when they came upon it, because it was there when they moved there, and the day and when they asked the natives who lived in the area, they're like, I don't know, we've just kind of used it. Right there since we got here. We didn't build it, but it sure is useful.

2:01:00

Exactly. You know, there is a site that is in Connecticut, another one. I mean, I mentioned there's many of them, but the Gungi website, which is the the Navy base and Grodd. And the state now has taken over part of that in a University of Connecticut, Stockton, McBride and he actually came up with visitors last fall, I think he was pretty impressed by our site, he was impressed by gundula. But again, it's out of his realm, you know, it's not pottery, it's not a point. It's a great big, complex stone structures. But he was written about in 1654, we believe they were referring to guns you want a guy named John Pynchon wrote to go the governor winter at the second governor, John Winthrop, and he wrote him in 1654, asking what the stone structures were. So if these were all built by our colonial settlers, why somebody in 1654 said, you know, what is this you know, back then, you know, but we haven't use an optically stimulated luminescence. And they've been doing it from here to Virginia and 22 sites, and the

results are coming out pre colonial, a pre Columbian dates, and they actually can date during winter saw the light of day lash. So if you build a chamber and the dirt on the roof, or next to it is undisturbed, you get the core, they send it out two years later, you get the results back, you know that the structure was here and the jury came in after you can kind of relatively data, you know, the structure say, okay, the direct data to this era. So we know the structure is at least this fold. And that's what they did at our site. One of the one of the four places, they took the dirt samples from natural to stone and to direct one of the dirt sediment samples came from near the end of the tail of that serpent by the watch House. And the data that was the dirt was there in 1400 80 hadn't been so 600 years ago. So the wall wasn't built by the settlers 200 or 300 years ago, this thing was already sitting there. 1400 That's before Columbus, and

 2:02:47

yeah, yeah. And they're, they're definitely more than one location in the Northeast that that is pre Columbian of exploration, everything from Viking to possible Knights Templar. All kinds of things. So.

 2:03:08

Oh, yeah. All of that. So fascinating, too.

 2:03:12

Yeah. And, you know, Templar would be interesting in your area, especially, especially knowing its proximity to Oak Island. All that kind of stuff. Is there there. There are quite a few sites right there in New England. That that kind of bear the mark,

 2:03:35

like to Westford night, which is 20 miles, 25 miles from us. And we actually had that forecast that night. Yep. In our visitor center. You can actually see it there. And I don't know I think I have a hook next oh, by the palatial Cliff shelter. We found pottery out there that was Native American that dated 2000 to 2500 years old. That was the habitat site, declaration, quick shelters on the west side of the property. You and I, we didn't get out there because there's just so much to explore. You know, we were but if you come back again, I'd love to take you out there. So I would

 2:04:06

love to come back for days and days and days, Dennis, back. I know, I don't think I could spend enough time

 2:04:14

.....

come up. We're open all the time. And we'd love to have you. I've been talking about you coming up this summer and everything. And if you tent I have a perfect place for a tip. If you don't come up every day, we're open up open up special hours for you. You know, maybe we could try that experiment with the table to you know, maybe we can use like an app on its own and try to calculate Well, you know, that'd be kind of fun. Yeah,

 2:04:34

absolutely. Absolutely. That would be epic. Because once again, the search for alignments and reasons for the more alignments you can find the closer you come to finding the reason for the alignments. Exactly. Yeah. Because once again, like you said, things have changed. Heck, things have changed just in our lifetime. Dennis, like you right now. You can Look it up right now the North Pole was on the move almost a mile a day. It's scary. It's scary. So, yeah. roaming around.

 2:05:08

Yeah. It's kind of so it's good way to think about some of these things we can date to help the date the construction time, perhaps, you know, which is pretty good. Yeah, definitely. You gotta come back, you know, you can come up, bring the family pick up. These days, you know, no rain. No, no, no. So you have to do it, but which we're actually may have a few snow flurries coming up soon. I'm not looking. But I don't get older. I don't like shoveling that much.

 2:05:41

Well, let everybody know, Dennis. Cuz I mean, you guys, of course, have a YouTube channel, all kinds of good stuff. Your YouTube channel is embedded on our videos page. But y'all just put a video out about Oracle chamber that was really cool. Here in the last couple of days, you have all kinds of videos on there. But let everybody know where they can go to find out more about America's stone hinge where they can, if they're local, where they can go to get involved where they can go to bring groups if honestly, it's one of those, like, bring your Kindergarten group up there.

 2:06:18

But I gotta get up tomorrow morning. And we got I think 84 kids coming up in the school was here last week with 84 kids and about three weeks ago, the same school was up for about the same number of children. So we love having school groups after COVID They're coming back. Now finally, that was a couple years where there was none. But Ron, as you mentioned on Tik Tok, we have a YouTube we are on YouTube, as you mentioned, we're on Tik Tok, also, Facebook, but if you go to our web page, Stonehenge usa.com. They can go on there. And we have links to all of this. We have a leather minute video we show in our theater. We have a free app download, he put that on the phone to mobile app. And he could do a complete virtual tour of the site just as if you were there visiting us. So you can rely on your lazy boy at home to a complete virtual tour. If you use it. When you visit her she can walk around and it will actually talk to you pictures and text as you're walking. And we also have a four page map. The

website's really good. It has pictures, it has information, a phone number has email, you can also you know give us a call if you'd like to have a question. We have events coming up like a winter solstice, of course, we mentioned that we'll have a drumming circle that day. On the on the 17th. We're actually have a ceremony the woman has been doing it for years. And I'd like to do it on Saturday the 17th I'm available. So that's a few days before the solstice. And we have VIP tours going on again after a COVID we started doing that. Just recently before COVID I was doing VIP tours. And finally getting back into that again. So that's my reservation. And we were thinking of doing stargazing next year. In the fall, we have a huge area. We'll talk about the stars. We'll talk about the constellations, and we may have some guest speakers come in, which would be pretty cool. You know about astronomy, astrology, that kind of thing. We might be doing that. And probably next September in October, I think. Yeah.

2:08:12

Well, Dennis, I want to thank you so much for your time. As always, I love our conversations, and your sight is one of the most fascinating I've ever been to in my life. The fact that you guys keep finding more and finding more, and digging into the history of this is absolutely awesome. Keep it up. We are here to support you in any way that we can my friend.

2:08:37

Well, thank you Christian again, Craig, congratulations on the 100 into another 100 more and I hope I can be part of that. I love being on your show. And yeah, come on up anytime and maybe we can try a couple experiments. You know what some of the apps we have, you know pretty cool. Thank you, Chris. Thank you so much. Do you have to amplify me

2:08:54

most definitely hold the line while we close things out with the audience Dennis while you are online checking out everything from Dennis stone and America's stone hinge over at Stonehenge USA folks.
