00:08

Coming to you from the city of the weird,

Speaker 1 00:12

exploring topics from the esoteric and unexplored to dimensions unknown, shining a light of truth on the darkest corners of our reality, welcome to the curious realm.

Speaker 1 00:38

Well, hello everybody, and Happy Tuesday night. So glad to be coming at you live this week. We will have some pre record coming up here soon, folks, as I will be returning from Psy games. Very, very much looking forward to the inaugural Psy games. I'm so glad to hear that Hakeem and that crew managed to sell out their premiere event,

01:05

groundbreaking event. It's going to be great.

Speaker 1 01:09

I cannot wait to go to it. We have some great guests tonight. In the second part of the episode, we will be joined by John Brandenburg to talk talk very shortly about the clementine missions.

Very, very shortly about the Clementine Mission, as well as Mars and his books, things like that. And in the first segment, I am very, very glad to welcome back to the show our friend from the Hollywood disclosure Alliance, Dan Harari, welcome back. How have you been?

S

Speaker 2 01:43

Thank you, brother. It's very nice to be back. I've been okay. I've been really busy with my various UFO insanity. You know, I still run a PR business to pay the bills. Yep, and I have a fairly new dog that I've been training, so I spend a lot of time with my dog. Oh, that's my and my friends, and I read and I hang out with my daughter. But overall, the UFO side between contact in the desert, HDA and I know a bit later, you and I want to talk about the WOW signal, my Oh yeah, news website. So you know, things are, things are steadily busy. I'd say,

S

Speaker 1 02:21

well, and you, you, like so many people in in the world of research into UFO, UAP, we were just talking before we went live. It is such a passion project, like it is, it is an all consuming fire, you know? And it's one of those like, Yeah, you, you just, you spend hours and hours and hours and hours on it, just connecting people and you, especially Dan, you are all over social media. You're all like, I get emails from Hollywood disclosure Alliance and wow signal and everything else on the regs. So you were consistently putting putting updates out there, letting people know, building those literal bridges amongst the disclosure community. So congrats, man, it's great to see you working in the background.

S

Speaker 2 03:09

Thank you. That's very sweet. And actually, that's a really good way to say it, because, you know, I'm a natural born communicator. I've always been, you know, I've been a Hollywood publicist for almost 45 years, but since I really got immersed in ufology, deeply, deeply, deeply immersed only two years man, it's only been two years my book after they came came out in March 2023, I had been studying ufology. Before that, I had had several UFO encounters. Before that, I had become a member of move on. So Cal 2007 but when my book, here's what happened, and I'll do the condensed version. But in March 2023, my book right here, my little my baby, after they came. This is my this is my life. I have a son, a daughter, a dog, and this book is my fourth child. In fact, it's on it's on audio book. Chris, it just came in on audio on Amazon. Please tell all your people it's on Amazon to help a poor, struggling. Beverly Hills, publicist, that's right. There it is. Audio Book, \$0 with membership. Yeah, I'm gonna make a lot of money. Clearly, you on the audio book. \$0 I'm cleaning up there, huh? Now I can retire to

S

Speaker 1 04:25

Hawaii subscriber, though I'm a subscriber to such things. So yeah,

S

Speaker 2 04:30

.

okay, there you go. It took me a year and four months to record like it better not be free. It better not be free. My book came out March 23 I met Steven Bassett. Now the story behind the book is just the reason I'm here tonight, and I'll do this really quickly, because I've done this so many times. But in March 1970 when I was 13 years old, my father picked me up one day from school in suburban New Jersey. So he drove me home from school. Daytime, a huge UFO craft, silver V, like the letter V, like a victor, hovered above my father's car. Daytime, my father's driving me home. Three o'clock in the afternoon. I looked through the windshield. I said, Dad, stop the car. There's a UFO above us. Stop the car. We got out. We looked up, Chris, there's this enormous, unbelievable, you know, eighth wonder of the world, V. It's just this enormous silver V. It's hanging above my father's car for no apparent reason. And I'm now, I'm 13, and I'm jumping up, Dad, look, Dad, it's Star Trek. Dad, it's Star Trek because you and I would be like, Oh my God, my father looked at it. My father was bored to tears. He couldn't care less. He looked at this thing like I had a cabbage at the supermarket. No interest. Okay, I forgot about that. And I did this story with you before the summary. You know, I forgot that that happened for 47 years, which is probably the most amazing part of the whole story is I forgot that that happened for 47 years. So 47 years later, 2017 my father passed away in Florida. He had a bad death. He died. I get the call. I'm here in LA. Couple days after he died, I went to a local deli here in LA to get a pastrami sandwich and to mourn my father, and as I'm sitting at the restaurant, a beam of light, or a beam of energy, hit me in the head hard, and then through my eyes projected. And I've told you the story, and it's true. Steve Bassett said, Dan, that's the most amazing story I've ever heard. Steve Bassett told me that to my face. It played the whole movie from 47 years earlier, home movie of the 1970 UFO sighting played in the air as a color 3d hologram with audio. I'm now watching in 2017 I'm watching me, my father, my father's car, and if silver V from 1970 and it's playing in a deli when I'm waiting for my sandwich, right? So that was just, I still can't believe it. Every time I think about it, I'm like, how, why? What? Who? What, what? Now after that, I heard in my ear, right after the it played for 2030, seconds, and then it dissipated, and then it was, get a pen. I heard my hand wrote. My hand did automatic writing. My hand wrote. Write a book about benevolent aliens, lead characters. Father knew about UFOs, ATC, all capital. So that's then everything stopped. That was supernatural. I held this piece of paper, yeah, and I'm like, ATC, ATC aliens. What could that be? I came up with after they came and I ate my sandwich, I drove home. Okay, I had to write a book. Now, here's what's very interesting, and some of this I may have told you last time, but I don't remember. I go home, Chris. I called my mother. My mother was my father's first wife. Now, my father worked for the US Army for 45 years. My father was a physicist and electronics engineer at Fort Monmouth army base in New Jersey. Top secret we knew he worked on radar and missiles. That's all we ever knew. We never had any specifics about what my father really did for a living. Nobody even knew, including my mother. So I called my mother right after my father died, I said, Did dad ever talk about UFOs? She said, in the early 60s, they took your father deep into the Vault at Fort Monmouth base. They showed him something above top secret. He came home, he was very upset that night. He was pale and shaking and nervous, my mother said, and she said to him, Honey, what's wrong? My father said to my mother, I saw something today in the vault at the base. It's above top secret I could never tell you or anyone as long as I live. Wow. My father walks down the hall. My mother said, your father was never the same after that day. Okay, now that's part of the story. Now, after that, I have this. I have my little props here. Okay, okay. After that, I go through my scrapbooks after my father died in 2017 I went through my scrapbooks to look at pictures of my dad. I found this in one of my scrapbooks, Chris, this is a profile of my father at his workplace from 1985 Oh, wow. My my father invented laser driven drones for the army. Proof, I have this right here. See my hand. My father invented drones with lasers for the US Army in 1975 he tested the first one ever at White Sands Missile Range, October 75 it's right here. Okay, my father invented drones. Okay, nobody knew that, so that's pretty cool, right? Now, the story continues. You. Uh, as I'm writing this book, thinking

about my father, I happened to be reading Richard Dolan's famous book, UFOs in the national security state. In the back of this book is a glossary of UFO sightings above US military bases in 1951 and 1952 right when my father started working at Fort Monmouth, there were famous UFO sightings above Fort Monmouth on radar. My father worked in the radar branch. He had to have known about it. Had to absolutely had to have known about it. Yeah, okay. Now moving on. I just read this book a month ago.

10:43

This is the history of Fort Monmouth, when my father worked

Speaker 2 10:47

these people, including including my father, but starting in the 20s and the 30s, they invented radar, walkie talkies, FM radio, night vision, ground to air, radio, weather and TV, satellites, drones and hundreds of things they invented. Where my dad worked, see, this is the US Army's house of magic. So where my dad worked was, like, it was like the geniuses of American scientists. Yeah, we're creating FM. Think about just alone. FM radio. Just alone. FM radio, how about that? Okay, yeah. Okay, so that's that next part of the story is in 2023 Steven Greer did a press conference on TV from the Washington press club, yep. And he showed a chart of 150 US military bases that he has proof of through his whistleblower network that worked on recovered reverse engineering of recovered et craft. Okay, so I'm watching this on my TV. We all have a big TV. I freeze framed this slide. It was a slide of 150 us basis. So Chris, I freeze framed it. I got up on my TV with my finger, and I went number 51 Fort Monmouth, New Jersey. Yeah, just to According to Stephen Greer, he has proof, proof that they worked on it. Okay, and now, here's the last here's little cherry. I just read this book, Joe McCarthy, Fort Monmouth in the deep state. Someone just told me about I read it this summer. This book, long story short, Joe McCarthy uncovered in one of his army hearings the fact that where my father worked fort, Monmouth radar division was involved with Project Blue Book first and only time it was ever revealed this in here when I saw hackers, I'm like, That's it. That's it. So my father knew about UFOs. Wow, that's good. And when he looked at that craft when I was 13, and he looked at it bored to tears, that's why now, when I had that home movie, it was three days after he died. Here's what I truly believe. In my heart. I believe that my father went to heaven and sent me that home movie from heaven, from the other side to say, to say, Danny, remember the UFO we saw 47 years ago. I knew about that. I was involved with that. That was part of that research I could never tell you or anyone because of my NDAs. I'm dead now. I have no more NDAs to protect. That's right, my father sent that to me from heaven, okay? All of that comes together, and then I write my book after they came. Was born. It was given, I think it was a gift given to me from my father, beautiful. Okay, and the book is about two benevolent aliens. It's sci fi inspired by true events. They come to earth to save mankind. They save the life of this drowning lead character page one. He's drowning his 70th birthday. Hates his life. He's suicidal. Is killing himself in the Pacific. This huge craft comes out of the Pacific be beams him up, saves his life, travels across la deposits him at Dodger Stadium, live in front of the world's press corps and the army and the military and ambulances and fire trucks, everything's there. And these two beautiful aliens, seven foot tall, Pleiadian, male and female. They come down, gorgeous people of Earth. Don't be afraid. We're here. We love you. Everything's cool. We've come to save mankind. We have a relationship with this guy. They beamed down, this guy who just was drowning. We saved his life. Bring him your problems. He is our Ambassador to mankind, and

we will work through him to use our technology for peace and good. They leave this shmucky guys on the ground, and now he's the most famous man, right? Because he's on live Global TV. With aliens with this huge ship, the ship leaves, and they're like, Who the hell are you? He goes. I have no idea what's happening. I have no clue what's happening. That's the whole book, and I'm not going to just tell any more about the book, but it's quite good. I'm sure I'm pitching it right now for a TV

S

Speaker 1 15:13

It is a fun read, and I remember I interviewed you shortly after the book came out. It was actually Earl gray that introduced us,

S

Speaker 2 15:22

yeah, two years ago. That's amazing. May he rest in peace, yeah,

S

Speaker 1 15:26

and, and, you know that that brings us to let, let's let this be our kind of pivot point into the Hollywood disclosure Alliance and the starting of that damn because once again, that was a very short time ago that that the push for this really began, and it's been amazing to see, literally, the mountain that has been built out of the Hollywood disclosure Alliance. And since, like, Hey, we're starting this thing with Steve Bassett to now where, where you've got a massive network of people and a beautiful mission of really trying to change the machine that is Hollywood. Because once, once a through line for anything, it doesn't matter if it's a comedic through line, like, hey, if it's a buddy cop comedy, like, that's a 10 year through line. Like every studio is on it. Everybody's making a version of it, things like that, you know. And when you're talking aliens like that, that his road crests and troughs, you know, from the time, and there was a huge lull between, almost, almost between et and fire in the sky, as far as like major alien movies that really made money and had any kind of impact like that. But even then, it's interesting to see the way that those movies are portraying the alien contact experience and and the way that alien contact would be handled

S

Speaker 2 17:02

absolutely right. Okay, so, yeah, this was a pivot. Exactly was the pivot. So when my book came out, it was March 2023 I went to a number of UFO conventions. One of them was UFO con in San Francisco. I met Steve Bassett there, march 2023 I gave him my book. We became friends, we exchanged phone numbers, and he lives in Washington. I'm in LA. And I said, Are you ever in LA? He goes quite often. So then two months later, at the end of March 2023, he came to LA. Let's have lunch. We had a very long lunch in Hollywood. He told me his life story. I told him my life story. We were. I knew who he was, but we were stranger. And at the end, Chris, he looks at me, he goes, Dan, you're a Hollywood guy. I'm a disclosure guy. What can we do together? Literally, said those words. I looked up at the ceiling, and I said, Steven, we're going to create the Hollywood disclosure lines. And I shook hands with him, and he said, That's it. That's exactly right. Now neither of us knew what it was, man, we didn't know what it was. It

was literally three words. That's all we have. Four days later that year, was contact in the desert, 2023 Steven invited me there. I was his guest. He introduced me to Richard Dolan and Nick Pope and George norri and Ron Janus and Ron James and Paul Heineck and Katie pace and everybody you could think of. And we were telling everyone we're going to create the Hollywood disclosure lines. The first person, literally, that we told Chris, was George Norie. He put his hand on my shoulder. I'd never met him before. He goes, Danny, I want to be your first member. I go, George, you're the first member. Nick Pope was the second member. George Richard Dolan, I think was the third so you know. So at the end of that contact Chris, we had three words. Hollywood disclosure has three words, and we had every major UFO researcher in the world. We had no logo, no website, no mission statement, no business plan. We had nothing. That's all we had. Summer, Fall, 2023 Steven and I met countless times. What is it? What is it? What can it be? What is it? What we don't know what it is. Steven came up with. It's a networking group, a networking group by which we blend together two disparate, historically disparate groups, UAP et experiencers, researchers and disclosure advocates with Hollywood. And the word Hollywood means the entertainment industry, okay, but Hollywood is a sexier word with Hollywood, writers, producers, directors, performers, podcasters, radio show hosts, content creators. Okay. Now with Steve's years, 30 years in disclosure, and my 40 years in Hollywood, we literally and there you go. There you can see some of our affiliates. We cut and pasted together our friends, our peers, our colleagues, our clients, people we know and love. Might my daughter create? The logo and the website, my daughter's there's Anjali right there. That pink one, that's my daughter's logo, right? She created the uhca logo and the website, and we put together all our people together. We launched. We only launched officially in November 2023 we are less than two years old. Today. We have 225 members. You know you are one of the members. Yep, we have members all over the world. Half again are on the UAP, let's call them experience or researcher side. The other are on the content creation side. And we have a live event every quarter in LA, if we had money, I would do them all over the country. But we don't have money. We are a 501, c3, if anyone's listening wants to make a donation, absolutely go there and donate. If anyone out there wants to become a corporate sponsor, contact me and then you will instantly become my new best friend. We need a corporate sponsor. There's so much I want to do with this group. We need, we need a hero with 50 grand. I mean, really, to be honest, I want to do an annual Holly HDA Media Awards Banquet event in Hollywood. And yeah, you know, best, best portrayal of ufology and feature films, documentaries, books, TV shows, Lifetime Achievement Award. Of course, Steven Spielberg would get the first Yeah. I mean, right, and I can reach I can reach these. I don't, I met Steven once, but, I mean, I can reach them, yeah, I have the means by which I can reach these people. So we have a live chat room. That's really where a lot of activity takes place. People talk in there. If a documentarian is saying, Hey, I'm doing a new project on people who have had contact with Pleiadians. Well, I have a good friend named Mark. He lives in the Bay Area. He's been contacted by Pleiadians for 60 years, and they have helped him along his whole life path. Or if a documentarian says, I'm making a film about women who've been abducted and given birth to hybrid children, okay, I know three women in the HDA, right off the cuff, who have had that terrible experience. It's we have an agent on our board of directors. His name is Sean West. He goes Dan the HTA is the ultimate UFO casting call resource. If you have a film, feature film, a TV show or a documentary, and you need any one ufology, you go there and you're going to find five, six people that are gonna have either interest or experience or knowledge about about the subject that you are pursuing. You

S

Speaker 1 22:47

know that is a really, as a content creator, Dan, that is that is a huge resource to have to

because here's the thing, man, like even as a former on air, producer for for alternative media. Like, part of my job was Google stalking people. And I lightly joke with guests.

23:07

I like that stuff. I like that term

Speaker 1 23:10

whenever they're like, my god, how did you find that out? Like, how did you dig that up? And it's like, yeah, it used to be my job to Google stalk guests for a host. Oh,

23:18

I love that. I'm gonna steal that.

Speaker 1 23:21

But quite but quite literally, it's the fact of like there, there is a process that you have to go through, not even finding people, but vetting people and making sure that you know they're trustworthy, and things like that. So the fact that you guys have already assembled this literal superstar list of not only researchers, but experiencers that can be on screen, they're used to being on screen that have been on Ancient Aliens and other such documentary shows and movies, is fantastic, and it's an amazing resource to be able to lean on for stuff like that.

Speaker 2 23:56

Thank you. Thank you. Well, my goal, my personal goal with HTA is to help nurture and develop the next generation of feature films, TV shows and documentaries based on real life experiences of real life people. And like you just said, Chris, we have at least 100 experiencers in this group and and now, you know, okay, so, I mean, Travis Walton's in the group. We all know his story, sure. Whitley Strieber's in his group. Nice Guy, both of those. Both of those guys are lovely. I've met them both twice. Great guy, yeah, but there's a hunt. There's around the world, okay, there have to be hundreds there have to be hundreds of 1000s of people who have had extraordinary experiences, Chris that you and I and Richard Dolan and Nick Pope and Steve Bessen never, ever heard about. Ever, never, once. Yeah, they've never had the courage they thought they'd be ridiculed, right? Yeah, their parents would if they were teenage. Parents would put him in an insane asylum. I've had four experiences personally myself. Three of them were remarkable UFOs. One was, I'm not sure what the hell it was, but there are a million stories. And if Hollywood, Steven thinks, here's what Steven Bassett thinks, and Steven is my best friend, so I can, I can say nice things about him, and I can disagree with him as well. Steven said, Dan, the day disclosure happens, everyone in Hollywood is going to discover our website, and our phones are going to be ringing off the hook, and our thing is going to explode. Yeah. Okay, that's well, well and good. Now, Chris, before we went on the air, and I've been very depressed since contacting the desert, I truly do not see big D disclosure happening

anytime soon. I don't think President Trump or the new Pope or king of England or Putin or Netanyahu. I just don't see it. I don't see that they have any gain. What would be the any of their gain? Yeah, it's just fraught with problems, fraught with now, unless the ETS land, like in my book, they land in Dodger Stadium, it should only happen. But unless they do that, what gain do they have? You know, like, think of all the lawsuits and all the Yeah, and all the legal things, and how come you didn't tell us and you've been lying. It's just fraught. There's no game for any world leader. My personal thing would be if I think the new pope, if anyone world leader could do it neutrally, I honestly think it would be the Pope, right? Yeah, especially the new Pope's American, that'd be cool, yep,

S

Speaker 1 26:40

yep. And you know, it's interesting that you bring that up, because all of a year and a half ago, there was the large NASA panel that was done where they actively brought in, like, 12 theologians to talk about, like, and literally, that Brookings Institute, way of, hey, if we have this larger discussion. What does that do to things? Because that is something that like, yeah, it's going to shake the foundations in the announcement like that,

S

Speaker 2 27:11

while Danny, she and s New Paradigm Institute is that's what they're all about. They're like, this is going to blow that's going to blow everyone's I mean, even, look, Chris, even you and I, I mean, we know this is real. We've known this is real. I've known it for years. You have known it for years, yeah. But if Trump went on TV tomorrow and said, look, it's time, here's what we know. And they and they said things that we had never heard about, you know, like, like they gave us free energy in the 50s, no, but, but, but, our military doesn't want it out, because it could be used for bombs or something. There's so much. It's such a huge subject. That's why this is so fascinating. Lately, I've been telling people I am a 20 year student. I'm a 20 year student of ufology. I've been studying this intensely for 20 years. Here's ufology. Wait, I'll give it my hands here. Here's ufology. Here's the all the knowledge in the world of ufology. Here's how much I know.

U

28:05

Yeah, yeah. I know this,

S

Speaker 1 28:06

literally, like the visible spectrum versus the actual spectrum. Exactly three nanometers of

S

Speaker 2 28:12

knowledge. I know the head of a pencil tip Christopher, that's what I know there. And then Richard Dolan, right? Knows this, right? And people like that. Here's, I mean, Avi low probably knows this, but, but what you and I know, man, it's, it's the tip, it's the script, it's the scraping,

S

Speaker 1 28:32

well, and, you know, but what's funny is, when, when you watch any of these things long enough, when you metric these things out long enough. Dan, it is. It doesn't take rocket math to figure things out and see if they my prime example would be the whole drone situation that happened in Jersey. Like I literally had to recall a guest so that we could do an update. I was like, I've never done this. I've never had an episode where we pre recorded and literally called so many things that three days later, every single one of them came true where it was like, Oh, we just saw them talking about, you know, how, like, they just had the big UFO hearing, and they were saying that, you know, these things were appearing over sensitive areas. Well, why aren't we having a bigger conversation? Well, because it would point out a gaping hole in our ability to detect these platforms over sensitive areas. Then suddenly there's drones over sensitive areas that we can't detect and do things with that are popping up everywhere, and it's like guaranteed next they're going to have a funding hearing about, how do we get funding to find out about the drones, and that's what happened. Like it, it plays out like a, like, literally, like a Hollywood script, like it is formulaic as watching Law and Order, where it's like, the only thing that's missing is, you

S

Speaker 2 29:55

know, that's That's hilarious. Well, let me ask you this, do you. Know Steve Bassett theory about drones because it went viral.

S

Speaker 1 30:04

I heard part of it. Please enlighten our audience.

S

Speaker 2 30:08

All right? I believe. I believe. And Danny Sheehan believed that what Steven came up with was correct. We all know the the huge drone flap, right? It was late last year, early this year. My mother lives in New Jersey. She goes, Danny, there's drones. There's drones. Should I be afraid? I come on, you're 90, in a wheelchair. I don't think the drones, they're not coming. I don't think the drones are coming for you, mom. I think you'll be okay. Okay. I love doing my mother goes, you use me for comedy, don't you? I go, Mom, your comedy gold. That's right, that's right. And then my mother's famous line, Danny, it's enough already with the aliens. It's enough already. It's my favorite

P

30:47

one, enough.

S

Speaker 2 30:49

I've gotten, oh, Chris, I get big laughs with that. Okay, so there were all kinds of things in the skies above the East Coast. Yeah, many, many, many of them were big, white orbs. White orbs. Okay, a white orb is not a drone, yeah, a white orb that's lit up, it's not a Chinese weather balloon. That's not a drone. So, according to Steve Bassett, who's been studying this every second of his life at literally 30 years, he said the US military realized there was a major et NHI flap. It's called the flap. And as soon as they did, they said, Uh oh, we can't have the world know that ETs are here. So the US military sent up hundreds and hundreds of us, military man made drones. Side note, my father invented drones. My father would have thought if he was alive today, dad, you know those drones? Those are your drones. Dad, I wonder what he would have said. Why a magician? And this is the classic that Paul Heineck says this to a magician. Says, Everyone look, see this card in my card, I'm going to make its card, turn it into a rabbit that the guy's doing the trick with his other hand behind his back. Yeah. So the US Army sent all these drones. They were man made American, US military drones, hundreds and hundreds. Everyone saw drones, drones, Jones Jones Jones. And then Biden went on TV. Everything's cool. They're only drones. Everything's fine. They're FDA approved. Jones Jones Jones, yeah. And then Trump goes, I'm gonna get to the bottom of it, right? I'm gonna and then what's his Carolyn Levitt, what's her name. Two weeks later, I spoke to the President, and the President said they were Jones Jones Jones, yep, they were all FDA approved. They were just drones. Jones Jones Jones, nothing approved. Nothing out there. That's like, the like that means anything. And remember, during when it's happening, are they Chinese? Are they North Korean? Are they Russian? Yeah. Are they it was it was US military to deflect the fact that a huge extraterrestrial, not invasion, maybe they're just coming to look and say, hey, hey, we're here just, we wanted you to know. Yeah. So Steve Bassett said that on an interview, and it went viral. I think it went to like, four or 5 million views or something,

33:06

yeah, yeah. And, you know,

Speaker 1 33:11

there's all kinds of sad news that's literally been the scuttlebutt coming out of New York Times and things like that lately, is the fact that so many things have apparently been military guys, you know, the same way that they say the the the stuff from Roswell was a was a hot air balloon, or a weather balloon mogul project or Project Mogul like that. That changes four or five times, but the idea that they are using that as some sort of cover for other programs. And, yeah, you know, it's, it's something that we talk about with our security professional Mike turbo, whenever we have him on, is the idea that these things and these concepts are used and latched on to for intelligence, sub subterfuge, things like that, like if, if that is something that's popping up, then sure they'll, they will use that to their advantage to cover up black programs all day long.

Speaker 2 34:07

Oh yeah. Well, three weeks ago, I think I believe it was July 5. Three weeks ago, the Wall Street Journal wrote a big article basically through through our friend, our friend, Bob Salas. Robert Salas, he's a personal friend of mine threw him under the bus and said, because he, you know,

Bob Salas was at Malmstrom Air Force Base in Montana, 1967 March. He's like, third, what is it? 20 stories underground, whatever it is, yeah. He and his partner are overseeing 10 nuclear missiles in March 67 and he gets a call from above, from the his the security army guys that are watching the facility on the ground, up above and captain's house, there's a huge red orange craft. There's an orb, a huge red orange orb craft light hovering above the base. It's enormous. What do we what should we do? Yeah, well, poor Bob sells. What the hell is he supposed to say, right? Yeah, he goes, I don't know. I don't know, you know, like, Okay, keep me posted. So this guy kept calling him and calling him and calling him. Finally, the thing left, and then the next day, Bob Salas told me to my face, he said they brought everyone back. The next day, they all went in a big room, and everyone who was there the night before, and they all had to sign all kinds of disclosures. We will never tell anyone about this event, including our wives. Yeah, that was 1967 30 years later, 97 Bob Salas, a hero. A hero. Brave man. My father never was brave. Think about my dad. He was not brave. He never came out to discuss this topic. I wish he had. But Bob Salas said, Look, this happened. This really happened. So in the Wall Street Journal three weeks ago, it says that the army was testing some kind of fa cockta electromagnetic light on a huge platform, and it was a bright orange light, and they were shining it at the at the facility to see if it would affect the missiles. And Bob Salas wrote back, and he said, That's BS that is not ex that is not remotely true. And here's all my proof that happened. So if they take someone like Bob Salas, right, and throw him under the bus. So your point, Chris, the obfuscation it, there is no end. Man, this New Testament.

S

Speaker 1 36:24

Well, and you know, that brings up a hugely important point that we, I mean, we did a whole episode with our our good friend Earl Gray, about the Linda Napolitano documentary. You know, there, there have been numerous documentaries and things like that that have come out over the last year or so that have really, I think, divisively, tried to put a wedge in the community. You

36:51

know, I don't

S

Speaker 1 36:52

know that one, I don't know that is the one about the the Brooklyn Bridge abduction. Oh, yeah, yeah, yeah, that that rang into a lawsuit

S

Speaker 3 37:03

from, oh, right, okay, all right, okay, no, I know what that's

37:08

because of misrepresentation of

37:10

things. I know what that is. That's a fantastic

Speaker 1 37:12

story, you know, and and when you talk about things like that, when you talk about things like Tom Reed and even the Berkshire UFO thing and how that was utterly changed from other stuff, a misrepresentation of the actual story. It's, it's fascinating when you start diving into those little wedges that are put into the community that actively make experiencers maybe not want to come forward with their story, because they'd be called crazy later. You know, stuff like

Speaker 2 37:42

that. I mean, we're in, we're in 2025, you would think at this point, yeah, more would be known, right? You know, I've become pretty good friends with Paul Heineck. And Paul, you've interviewed Paul Heineck. I'm sure I

Speaker 1 37:56

have not yet. I have no you gotta get Paul to meet him at MUFON symposium, Denver, and he was, he was crazy busy with things, and never had a chance to come on, okay, but yeah,

Speaker 2 38:09

send me an email and I'll email and show I will. That'd be so he did two and a half hours with Chris Ramsey. A few weeks ago, I met Chris Ramsey, a contact nice guy. I said, I really enjoy your program. And Paul went into great detail about how his father, Dr Jay on Hynek, when he was enlisted by the Air Force to be the science advisor for blue book, he had no opinion about UFOs. Yeah, he didn't think about them. He didn't think it was real, you know? He's like, Yeah, okay, fine, I'll just do whatever. And for years and years, he's like, okay, you know, clouds, geese, weather, inversions, reflections, okay? But then you know, and then we all know this, the famous, the famous swamp gas of incident, 1965 when, when he knew, because his his bosses at the Air Force said, Dr, you know Alan Heineck, you you can't tell the world. This was UFO. He had itself a packed press conference. It was swamp gas. So Paul Heineck said, you know, his dad was so bummed about that from that event that he said, You know what, I got to start really opening my mind more. And then the more he studied it, and he hooked up with Jacques valet, and they did more studies. And Dr Alan Heineck knew something remarkable was happening. He never, I don't think he ever saw UFO or met an alien,

Speaker 1 39:37

but you don't have to. And that's, that's the thing, Dan, that's a good point. That's something that I that I bring up all the time. I wear my s like like a Superman underneath my shirt for

and I don't bring up all the time. I wear my S like, like a Superman underneath my shirt for skeptic. I proudly call myself a skeptic. I am a I am an experienter. I saw something in the sky. I don't it wasn't a craft or definable thing like that. But it was definitely an unidentified object that was flying through the sky. I have had my experiences, and I definitely tell people, no, I don't believe, because belief implies faith. I know that this is happening. Yeah, me too. I know just from the people that I've talked to, from the books and people I've interviewed over the many years, right? It's happening. It's out there, but my job as a skeptic is to literally not, not necessarily down everything, but to be waiting for the evidence that changes my mind, just like Alan Heineck, where it's the fact of he came into this as an utter non believer, did not think there was anything to this. That's one of the reasons he was chosen.

S

Speaker 2 40:45

Good point. And then brilliant, brilliant astronomer, yeah, brilliant astronomer, absolutely, by

S

Speaker 1 40:51

the end of it, he was like, whoa, whoa, whoa, wait a minute. I can't even tow this line anymore, because there's something here,

S

Speaker 2 40:58

right? So if he is a guy like that at that level, a brilliant, genius, lovely guy never got to meet him, but brilliant genius guy advised Spielberg on Close Encounters. Yeah, if he said, there's absolutely something happening here, it's real. It's real. Just his his story alone. It gives so much credibility. You know, I tell people, if people say, you know, Jen, there's no How do you know there's aliens? There's no way. How do you know? My new line on that Chris is, I'm going to say, you know, how many exactly, how many years have you been studying ufology? Ron, like my best friend, Ron, okay, Ron, how many years have you been studying ufology? How many years zero? Okay, I've been studying it every day of my life for 20 years. My friend, when you have 20 years come back and talk to me, yeah? People that know that, just add a hand. There's no such thing. It's nonsense, Chris, it's a great line, right? Yeah, excuse me, how many years, how many years have you been studying ufology? Isn't that a great lie? Well, it's

S

Speaker 1 42:00

a beautiful line, and really, really does bring the poignancy to it. Because, like I was telling you before the show, my my dad is one of those that whenever I talk to him, he's like, What are these time with little green it? Say, that's your dad with love, you know, Oh, absolutely, with open heart and open mind over a beer. And it's one of those, like you know, because I say it on the show regularly, Dan, we are not going to see a Houdini moment on C span. You are not going to see them wheel out a big Gurney with a with a with a sheet over it and, aha, here's the body.

S

Speaker 2 42:37

Yeah, here's EB from the Roswell crash. He's 100 years old,

S

Speaker 1 42:41

you know, like that. That's not what's gonna happen. But what we may see because of good people like grush and stuff like that, who have come forth and said it was my job to follow the halls of money, and when I got to the door at the end of the hall, they slammed it in my face. So what we may see is an Oliver North type figure who's up there at the end of it all going, Yes, my name is Jimmy. I worked for this alphabet agency, and it was my job to write the checks, basically, our Oliver North for this situation, who will be the fall guy, who may at least say, like, yes, black programs exist, and I wrote the checks for them, you know. And that'll probably be where it ends much like, much like I ran contra once, once we had Oliver North, like, did anybody really dig a whole lot deeper after that?

S

Speaker 2 43:31

Well, a couple things. David crush and Lou Elizondo had to get DoD approval for every word that they said, absolutely. So they had to get approval. And that's number one. That's right. Number two, Stephen Greer and Danny Sheehan, I believe, independently, although they worked together for many, many years, but now independently, Danny Sheehan and Steven Greer have probably collectively over, I'm guessing, but I'm sure it's over 200 250 whistleblowers lined up ready to testify, including Bob Salas, who wants to testify. Bob Salas is 84 years old. God bless him. Yeah. How much you know they should do it before he passes away, you know. But everyone's waiting for the UAP Disclosure Act to hopefully pass through Congress, if that gets passed, and Danny Sheehan and Steve Bassett have been and Chuck Schumer and Mike rounds working on it for years now. If that gets passed in theory, any major whistleblower can come forward and say, I have home movies of me with aliens in my basement. I dissect I work with aliens. They gave me the cure for kids. Yeah, that what could come out is incredible, but it doesn't mean that these people are still not going to be discredited, absolutely, assassinated or or jailed, right? Whoever. Yeah, my, my, it's not a joke. But my theory is, whoever the whoever the. Are descendants of majestic 12. We all know majestic 12 was a real thing. Okay, there was 12 guys, yeah. Okay. So then 20 years later, it was probably their sons, and then 20 years later is their sons, and then now it's their grandsons, a great guy, whoever that is now today, whoever holds that. It's like on The X Files. They had all those guys, the smoking man and all them, who the 12 men who knew everything you know, whoever is controlling that information, they're they still don't, never, they're never, ever going to want to give up that power.

S

Speaker 1 45:31

Absolutely not, absolutely not. And there's no, I don't think that there is a point of monetization that could be hit that would make them want to give up that power. You know, it's power pure normalize the technology. And I don't think it would be enough money for them to to let it be known.

S

Speaker 2 45:50

Well, it would, it would end. The oil age would end. It would clear. It would end. It ends. Religion and history as we know it, and, yeah, and politics and money and oil energy. It affects every single thing. It changes every single

S

Speaker 1 46:06

and what really changes that for the second pivot of the show, Dan, is the way that those things are announced, the way that these things come to be. And that is what I love, is your new effort with WOW signal news, the fact that you are helping researchers, people who are getting their research out there, their their books out there, their movies out there, other other amazing announcements in this stuff. That's what WOW signal is all about. You are You are literally helping people put out press releases for this kind of stuff. So tell us a little bit about that and and how this works, into the world of big D disclosure that we're talking about.

S

Speaker 2 46:47

Okay, thank you very much for the for the plug. I appreciate it. So when Stephen and I created HTA two years ago, I said, Steven, you know, because I've been a publicist for a long time, and a publicist works with media. So I said, Steve, where do people like you go? Where do you follow? Just go. Where do global you follow? Just go. What Media Resource? What website? What newspaper, magazine? Where do you go to get your news? He goes, there isn't. There isn't one such thing. There just isn't such a thing. So Chris, for two years, I had in my head that it was going to fall to me to create the destination. So I came up with the WOW signal dot news, which is what you're showing now. Thank you. The WOW signal dot news every Monday. So what you're looking at now is from yesterday. Every Monday, I put up new news up there. We get press releases, photos, cartoons, videos, guest articles, byline opinion papers from all over the world. We launched in mid March, my daughter, again, created the logo and the website. My daughter is brilliant, and it was set up so that people with with news, researchers, experiencers, filmmakers, like you said, Man, authors, lecturers, I ran every press release for contact in the desert. Yeah, I also happen, I also happen to be the publicist for contacting, but, but so it was incestuous there, but, but you know, Nick Pope has sent me information, and Danny Sheehan and Brit elders and my brother Steve Bassett. I mean, I get Ron James from MUFON. We're blessed by MUFON. We are. MUFON blessed us after we were up for three months, and we they now send out our news for us as well. Yep, we have media partners. We promote their news. They promote our website and our newsletter. Every Thursday, a newsletter goes out based on the news of the week. And now, ideally, and I told you earlier, ideally, I set it up to make money, because there are you can post the press press release, and then there are different distribution options up there, it says pricing. It says post your press release. And then there's the thing that says pricing. So that explains how it works. You can put in a press release. I approve it. If it's approved, I'll ask you how much money you could spend. And Chris, the sad thing is, people say, Oh, Dan, I don't have any money. Yeah, but, but then the publisher, editor in me goes, Okay, so I read it anyway. I shouldn't tell you people that on the air. But, well, because I love getting good news, I'm not gonna not run news because someone can't afford it.

S

Speaker 1 49:33

Well, it would, it would end. The oil age would end. It would clear. It would end. It ends. Religion and history as we know it, and, yeah, and politics and money and oil energy. It affects every single thing. It changes every single

well, you know, and it's something it begs to be known. This is something that I try to explain to everybody is I'm in paranormal circles, remote viewing circles, cryptozoology circles, things like that. Most people do not realize how many researchers out there have full time jobs like this. This is not what they do. 24/7, nobody is scrib. Then a check to go out to go Beckley teppy three times a year and do their research,

50:04

unless you're working for the History Channel, you know.

Speaker 1 50:07

And even then, even then, like, it's not like they pay you a crazy amount of money for an appearance on Ancient Aliens right here, you know, like, you ain't retiring off ancient alien money

Speaker 2 50:19

unless you're unless you're Georgia, well, unless

Speaker 1 50:23

you're an executive producer on a show, things like that. But, but quite literally, most people, and this is, this is talking heads that you see on shows, things like that. Folks, they they run websites, they do all kinds of things to make ends meet so that they can do their fiery passion the same way. Dan and I do like I told you before the show, Dan, this, this show vapidly wastes my son's future.

Speaker 2 50:46

And I told you this, this my efforts killing my Hawaiian retirement.

Speaker 1 50:52

That's right, that's right. But we do it because we love it and because we think that it is important to have the conversation. Because, I mean, that's literally how I am. My show is the idea of without the conversation, humanity doesn't move forward. So are we willing to have that conversation? Are we willing to put it out there? And that's what I love about you, HDA and wow signal especially, is that you are really putting it out there with Wow. Signal, it is just an amazing news conglomerate for this kind of stuff that really doesn't exist.

Speaker 2 51:26

Well, you know, and it's something it begs to be known. This is something that I try to explain to everybody is I'm in paranormal circles, remote viewing circles, cryptozoology circles, things like that. Most people do not realize how many researchers out there have full time jobs like this. This is not what they do. 24/7, nobody is scrib. Then a check to go out to go Beckley teppy three times a year and do their research,

Well, again, going back to when I went to that dell and had that nome movie experience, which was the most and I've had a paranormal things my entire life, that was, that was the that was the cherry. Yeah, I, I feel like I said earlier that my father gave me a message from heaven and said I worked on UFOs, but I have the just recently, Chris, I've been realizing that I am so dedicated to moving disclosure forward through the HDA and through the WOW signal. Why it's my way? I just realized this recently, man, it's my way of paying tribute to my father, absolutely, you know. And people, people said that to me, and I'm like, wow, you know, yeah, my father gave 45 years. My father was a genius. 45 years working in top secret. My father never told his sons or my mother what he did. I mean, that must have killed, you know, think of it. Can imagine you could you come home? How was your work? Honey? Fine. And then, and that's it. He never said to he couldn't tell anyone what he did his whole life. Yeah, this is now. He's gone. Yeah, I know he was involved. I have proof. I know it in my heart, and I'm feeling that in a way, I'm helping and people like that's why I admire Bob Salas. He's a little younger than my father was 10 years younger, but still the same, same kind of thing. I'm trying to give a voice to people through the media, with HDA and the throwing news news outlet through the WOW signal, tell me your tell me your stories. I want to share them with the world. So at some point, Christina, there'll be a tipping I'm very big on we are disclosure, by the way, that's we, that's right, it's going to be, and if it's not going to be Trump or the Pope or the king, we at some point, there'll be enough a million Travis Waltons in the world, there'll be so many, it'll just be it'll be obvious

S

Speaker 1 53:24

I didn't Dan, one of the, one of the things that I bring up on my show all the time, to try to bring hope to anybody in any situation where the odds seem overwhelming, it took less than 20% of the populace For us to win the American Revolution less than 20% so we don't need to convince everybody. We just need to convince the right people. We just need to convince convicted people and people who have the conviction to see this through to the end. That's all that we need. So we don't we don't need a greater, overwhelming percent of the populace, to quote, get it with my air quotes up listeners who aren't viewing, you know, it's one of those. We can do it with the right cadre of really good, dedicated people.

S

Speaker 2 54:16

I agree with you. I mean, there's so many, you know, people like you, and there's so many great podcasters. Ross coulthart, you know, I call him the Walter Cronkite of ufology, you know, I should have said that to his face, right? Think of it. But there's, you know. And then since the New York Times, 2017 Yep, you know, I watch CNN. I don't know whatever people watch, but even now, man, if there's a drone story or a UFO even now, they'll go like sometimes they'll say, Oh, little green man, or they'll say The X Files music, and it's a little bit tongue in cheek, and they smile. I'll give you a perfect example. One month ago, was contacting the desert. Month and a half, CNN came. They were there for three days. They were there for three days. I worked with them. I'm in a piece on CNN. I'm in a piece. Wow. The eight minute piece ran online, and unfortunately, Now Steve assets in it, and he came off okay, but me and others, Chris in this piece were kind of like the SEC, like the psycho, you know, the psycho alien people. They, they kind of made, my daughter was very upset. They kind of made fun of us believers. It wasn't, it wasn't an unbalanced and fair. CNN piece, yeah. So, CNN, even a month ago, they're still think, you know, hello people from Earth. The guy goes, when he starts the interview. Hello, people from Earth. Yeah, it's still, it's still ridicule, still open and

S

Speaker 1 55:44

ridicule, yeah, and that's just it, you know, it's one of those. What does that do to the overall conversation? How does, how does that make people see things? You know, it's very interesting. The way that media moves us, Dan and and, you know, as somebody who worked in a very dedicated listener base at one point with a host that I worked with, it's amazing to see how the words of somebody can move a mass of people to action and and also to a point of action in the opposite direction, to almost recoil, you know, where it's like, Oh yeah, well, I want nothing to do with that or, oh yeah. Look, look at that. Haha, you know. And the example that I bring up regularly, hold on. I'll put this on low. But here it is. That's the example that I still have it as a button on my show from Dr Strangelove. No, no, no, that. That is the the Michigan State Wolverine himself. That gentleman was literally two steps away from the White House against Barack Obama. He was genuinely excited. We're gonna take this we're gonna go all the way to New Hampshire. We're gonna go

S

Speaker 2 57:07

Howard, yeah, yeah. I know that would have been my second guy, but it was the guy when he's writing the other bomb and Dr Strangelove.

S

Speaker 1 57:17

But literally, they took that three seconds and punched him in the face and punched him, ruined his life, got him out of politics entirely. He was second runner up like close, almost tie with Barack Obama, until that clip, and that's all it took. So once the media grabs hold of a dialog and starts shoving it down your throat. It's a little hard for it not to be there everywhere and for you to be inundated with it. So yeah, the idea of, once again, CNN, other news agencies, coming and kind of poking fun at the event, or even even jokingly doing that. It's like, would you, would you do that at a survivor event? Yeah, it

S

Speaker 2 58:07

was really nice. But listen, I spent three days, I literally spent three days with this guy. I got him everybody he wanted, and then, and I was kind of, I was just so I didn't tell him I was disappointed in him. But yeah, he could, he could have done it better. Now it's a lot better than it was in the past. Oh, sure, mainstream media. Here's my take on mainstream media. David grush testifies, summer 2023 there's extraterrestrial life. We have bodies living in debt. We have extraterrestrial craft technology, everything immeasurable. I know it for fact. I swear on a Bible in front of Congress on live TV, right? Chris, I live in LA the next day, the LA Times I get the newspaper because I'm old school and I'm an old man. I get the LA Times I'm looking right. PAGE 19, page 19. Three little paragraphs, yeah, oh, an Air Force guy says there's aliens. And I'm like, Really, this guy went out on this limb, he's his wife and his life 19. Story, page 19. It was on page Chris. It was on page 19. Wow. And I said, that's, that's it. That's what I knew. I'm like this. This isn't happening anytime. Steve Bassett thinks it's gonna happen tonight, at midnight. I don't think it's gonna happen anytime soon.

S

Speaker 1 59:20

Well. And you know, once again, I don't think that big D disclosure is going to happen in in any way, shape or form that most people think it will. I think, much like any any kind of legislation that will protect targeted individuals, things like that, it will have to come through a legislative process like it will have to come through cutting the purse strings, through legislation that that's the only way that you

S

Speaker 2 59:43

know. The thing is, one of the books I put up earlier, there's a theory that during World War Two, the Cabal that was running the, call it the black government, slash, overseeing the UFO secret. There's a rumor that they were working with the Rothschilds and all the. World Banks to create their own form of wealth away from any government supervision. They have their own form of wealth by which they can do any clandestine thing they ever want for perpetuity. Yeah? So think about it, if Congress says to the new majestic 12 people, oh, sorry, majestic, but they're gonna how they're gonna roll in for Hollywood left you think, yeah, you think you could troll us when he can we have billions and billions from the rough child. That's

S

Speaker 1 1:00:26

quite literally the story of the Black Eagle trust, and Emperor Yamashita is gold. Is that? Oh no, no, the CIA found that gold,

S

1:00:37

black eagle trust, and that is, that is where that could

S

1:00:39

be. What runs the real

S

Speaker 1 1:00:42

black money and everything else is this trove of gold that was found after World War Two.

S

Speaker 2 1:00:47

I believe you, man, our power in America is not a president and it's not Congress. It

S

Speaker 1 1:00:53

is an oligarchical elite. It's pretty wild. Dan, I want to thank you so much for coming on. Number one, I would love to have you on at least quarterly to do Wow, signal updates, things like that. Well, let's definitely kick that off with this. You're going to be a media partner, absolutely immediate partner, anytime and always and before we let you go shameless self promotion time. Let everybody know where they can go to become a partner with WOW signal news, where they can go to submit to WOW signal, where they can go to check out the Hollywood disclosure Alliance, as well as the amazing Hollywood disclosure Alliance documentary that was just made.

S

Speaker 2 1:01:39

Oh yeah, we didn't get to that. Yeah, okay. Well, thanks a lot everyone. Go to hollywooddisclosurealliance.org.org. It gives you our mission statements. All of our members are there, including Chris and myself and Steve Bassett and a lot of people, Dolan and Pope and Heineck and all the people Katie page and Travis Walton, all the people you can think of. Go there. There's a button that says join. So go to hollywooddisclosurealliance.org Click join on the join button, it tells you some steps to go through. I'll get an email, and if you're approved by the board, you will be a member, you'll be on the website, you'll be invited to events and to the live chat room, and you'll get the newsletter. So that's that the wowsignal dot news. The wowsignal dot news, if you have a press release, a new book, a film, a TV show, a lecture, an event, if you've had a remarkable experience, I love photos, by the way. So on the wowsignal dot news, there's a button that says, Submit a press release. Now, post your press release. Yeah, right there, like Christus. Post, go there. It'll give you the steps you fill out a little form. I will get your information. I will then talk to you to see what kind of distribution you want and how I can help you get your photo, your video, your your movie, your your new book, your lecture, your event, your website, anything you like. I am here to I'm here to serve, to serve mankind like the famous Twilight Zone. Remember, that's right, it's a cookbook you you don't get on. It's a cookbook you are the one last but not least. Wait last, but not least. Please, please, please. Amazon.com, after they came. This is the baby that, yep, is helping me pay for my dog, because my dog only eats steak. I'm literally the only food my dog will eat is literally, I'm not kidding. Oh my god. So he's a very spoiled animal. After they came. It's now on audiobook. It took me a year to record it. And this is the little driver. This little baby drives Hollywood disclosure and the WOW signal. So check out my book on Amazon. Absolutely, Dan. Dan Harari author.com it's my other books. Dan Harari author.com is my other books. Thanks,

S

Speaker 1 1:03:52

Chris, awesome. Hey. Always great chatting with you. Man, always

S

Speaker 2 1:03:56

went really fast. We'll do it again. Okay, invite me back forever

S

Speaker 1 1:04:00

and always bud. You have an over and always, my brother. Whenever you have anything to

promote you, feel free to reach out to me. We are always here for

 Speaker 2 1:04:07

you. It's very sweet. Thanks. But absolutely, I want to play with my dog. You do

 Speaker 1 1:04:11

that. I'm gonna let you go. I'll be sending links to all this tomorrow. Thank you. Take care. Bye, everyone. Absolutely, man. Thank you so much. Thank you, Dan. While you are online, checking out everything from Dan Harari folks, make sure to stop on by curious realm. Curious realm.com is where you can like, follow, subscribe. That's where you can find everything. That's where you can find all of the YouTube channels of our guests, including the YouTube channel of the Hollywood disclosure Alliance, everybody, when we come back from this quick commercial break, we will be joined by the amazing

 1:04:49

John Brandenburg right after this.

 Speaker 1 1:04:59

So. Yes, the key to good science is good research. At the heart of good research is a good data set with the field observation and encounter log from curious research, you can easily keep track of your investigative information all in one place, making it easier to review cases and readily see comparisons and contrasts between them, whether out in the woods, watching in a back room, gathering EVPs or using high tech gear to track UFO, UAP activity, this easy to carry pocket sized scientific data log is the perfect companion for any field researcher. You can find your copy of the curious research field observation

 1:05:48

and encounter log@amazon.com

 Speaker 1 1:05:51

or visit the official curious realm store at curious realm.com forward slash store to reserve your copy for yourself, your family or a friend that you want to open that website again is curious realm.com. Forward, slash, store, you

 Speaker 1 1:06:20

Oh. Well, hello everybody, and welcome back from that quick commercial break. Thank you so

much to Dan Harari and the Hollywood disclosure alliance for their time tonight. It's always great to talk to them about the mission of UFOs, UAPs and media and movies. And that is the second part of our show tonight is about that as well. Thank you so much to Dan for that amazing segment. Thank you so much to everybody for hanging on through that. And also, thank you so much to our sponsors, true him science. If you're a user of CBD products like I am, stop on by truehimpsscience.com they are your source for amazing CBD products. I have been using them for five years now, at least. And I love their products. They are absolutely amazing. Christopher Lynch and true hemp science used a spy Jeric process using every part of the hemp plant, from the seeds and stems to the buds to the leaves to the fiber and the roots, every part is used, combusted and reused until nothing remains, providing an amazing end product full of amazing terpenes, all kinds of stuff. Stop on by and check them out. Truehimpsscience.com. Is the website that you want to go to. Curious seven is the code that you want to use to save 7% off your entire cart of \$50 or more while you are online, checking out true him, science, everybody make sure to stop on by curious research as well as curious realm. [Curious realm.com](https://Curiousrealm.com) is where you can find the books of our guest in this segment. Our guest in this segment is Victor Norgaard. He is the author of Morningstar pass, the collapse of the UFO cover up as well as a follow up trilogy. Morning Star pass is currently seeking movie options all kinds of things. And as you all know, I normally do not feature a lot of fiction on this show. But the whole reason that I had Victor Ron in this segment is actively because Victor Norgaard is the the nom de plume for none other than the amazing Dr. John Bram Brandenburg, welcome back to the show, John, how are you doing?

S

Speaker 4 1:08:49

Oh, it's a pleasure and honor to be on your show. Chris and I'm doing very well.

S

Speaker 1 1:08:54

We had the chance to sit down a couple years ago at the Irva conference, the remote viewing Association Conference in Menlo Park. That is where we first met. That's where I first heard the story of Morning Star pass from you, and I have been fascinated with it since, because it really is an awesome story. It's great. We'll be getting into that in the later part. Before we get into that, let's, let's start off with how you came to this, this realm of research and work to begin with, John, because you've got an amazing career. You You have degrees in plasma physics, spent decades working in that realm. You most famously, I think anyway, as a space nerd is are known as one of the heads of the Clementine Mission as well as one of the starters of the whole Mars anomaly movement. So, yeah, like truly, truly honored past in the world of you know, just astronomy. In space and everything. So

S

Speaker 4 1:10:02

I've been extremely fortunate. And I will just say, you know, I, I, but I'm I, I'm just doing my job. I felt like, God put me on earth to do certain things, and I'm just trying to do them. And it was not my original plan to be a into Mars anomalies or things like that, or even space missions, I was focused on energy, specifically fusion energy involving plasma physics, which is, you know, plasmas are like the Aurora Borealis or the stars, the sun lightning bolts. That's all hot gas that conducts electricity like metal, and when you wind that into a donut shaped magnetic field, you can then harness that to create fusion power. And that's, that was my, the major focus of my,

1:11:08

what I thought my career would be, and

Speaker 4 1:11:12

I wanted very much to work on, you know, unified field theory and things like this. But the I also wanted to get married and, you know? And I thought, well, I better pick a field that will be well funded as a scientist, because I knew that, you know, you're subject to government funding. So I, I actually felt guided to go into plasma physics. And I've never regretted that, that has

1:11:44

been a real blessing, and

Speaker 4 1:11:48

we're going to harness fusion energy, the power of the stars and and that will make the earth a much better place. It'll stop global warming and things like that. And by the way, the climate never sits still. It's always either going into an ice age or going into a,

1:12:08

you know, a tropical age.

Speaker 4 1:12:13

And so, you know, flip the coin, and so. But anyway, I I think we just have to harness fusion energy, just because that is the direction of clean, limitless power for the human race. Yeah, and so. But anyway, so I worked on that. I wanted to be I, and I was part of the Sputnik, the generation that grew up after Sputnik, so there was an enormous amount of encouragement to young people to go into the sciences, yeah, and I was, I was the beneficiary of that. My like my father wanted me to be a medical doctor, but when I told him I wanted to be a physicist, he said, wonderful, you know, and so that I had a great support for my parents for this and so then. But you must understand that energy is also has an enormous financial connection, absolutely. I mean, the the worst nightmare possible for some nations is that we will harness fusion power and not need petroleum anymore. For some countries, this is the lifeblood of their country, yep, if that goes away, they they, they won't know what to do. And so what happened, apparently, was the US government decided to back off on fusion energy, even while it was making great progress, because many of our allies, especially during the war in Afghanistan, were big oil producers. So I unfortunately got my PhD in plasma physics to do fusion energy. And then, and just then, then all the funding dried up and

 1:14:23
and so we

 **Speaker 4** 1:14:26
we found out later, there had actually been, or at least the rumor is, there was a deal between Washington DC and countries like Saudi Arabia that we would jointly work against the Soviet then Soviet Union, and one of the prices would be that we would stop our fusion research. So but it can be done, and it will be done, but in the meantime, I ended up having to give up. My great dream of harnessing fusion, at least temporarily. And I ended up in Albuquerque, New Mexico, working on directed energy weapons, which also involved a lot of plasma physics. And I went through there was a great nuclear crisis. It was mostly secret at the time. It came out right after the nuclear winter hypothesis in 1983 and it was called the Able Archer crisis. We were as close to a nuclear war as it were during the Cuban Missile Crisis, and the effect on the laboratory staff was absolutely devastating.

 1:15:44
All of these people realized that their

 1:15:49
wives and children

 **Speaker 4** 1:15:52
were all going to die if there was a nuclear war. And yeah, being it was, it was kind of, there was this feeling before that that, well, I work on nuclear weapons and things like this, or work in a negative nuclear weapons lab. It's not going to burn me

 1:16:11
and but,

 **Speaker 4** 1:16:16
I mean, I heard so many stories from people saying, you know, I used to think if there was going to be a nuclear war, I jump in my car, race home, get my wife and kids, and head for the hills and and then they said, but now we're just going to have a set dinner and wait for it to come, figuring that if they survived the nuclear blast and Fallout, so they would die of cold and hunger in the nuclear winter that would follow. So, so there was just devastating. And I was not

unaffected by this. I felt as a result of the Able Archer crisis, which we understood was going on, but we couldn't talk about it, that we were just going to end up having a nuclear war by accident. You know, it

1:17:16

would be, and a larger was,

Speaker 4 1:17:21

you know, almost a nuclear war by accident and so, so I was in kind of despair. And I remember then we had Christmas break where they would just shut down the laboratory where I was working of the government us, government lab in Albuquerque and called Sandy alet, and I was at home, but I felt this just deep depression like everybody else I'd worked with over this and

1:17:56

and then I saw The the

Speaker 4 1:17:59

idea that they might have discovered this carved face on Mars,

1:18:06

and they had

Speaker 4 1:18:09

television spent, you know, like a half hour television news story about it, yep, and I was, I looked at it and thought it was quite convincing. And I thought, well, this will end the Cold War. We'll go to we'll go to Mars and together with the Russians and explore this and and we're all going to be okay. And I remember putting down my little I four year old little daughter, and reading her a bedtime story, and realizing, you know her future, she's going to have a future, a long life. And you know, I I suddenly I had hope. And then when I after the Christmas break was over or back in the lab, I I reached out and made contact with the people who were doing this research, and they put me in touch with Richard holben, brilliant fellow, yeah, and he also realized the great import of this to end that we can end the Cold War and save the human race. And so we got very much involved in investigating this, and discovered that everything they found on Mars was was real, and were able to verify it using NASA, NASA data and that there was a dead civilization on Mars. There was a face on Mars, and then six miles from that, there was a big five sided pyramid, and this was if you showed pictures of the face and the pyramid. Pyramid in the same frame of camera frame, it was just obvious that this is a this is a dead

civilization, and the civilization looked like us. Yeah. So anyway, that's how I got involved. I wanted to end the Cold War, and as I joke with my good friend Vince DiPietro, who was one of the original investigators, I said

1:20:28

I did. We did end the Cold War,

Speaker 4 1:20:31

because the the face on Mars controversy continues to this day, and the Cold War has been over now for 20 years,

1:20:41

he started a whole new one

Speaker 4 1:20:47

that was two wars ago. So anyway, so And what also happened, interestingly enough, is that I became a space person, as I used my training in plasma physics and just defense oriented things to become a space cadet. Back they called me that at work as a as a joke, just to be sarcastic with me and I, I just said, Well, you know, I like space. You know, I like my space and so we we ended up. The Cold War ended, and all of the people who made fun of me for being a space cadet, unfortunately, a lot of them lost their jobs because they had been very oriented toward the kind of nuclear scenarios of the Cold War. Whereas I was had become a space cadet, which meant in the post cold war era, they were doing a lot of space satellite intelligence gathering to make sure that the Cold War remained, you know, that it really ended. So anyway, it all worked out. So it all worked out really well for me, that I got involved in this Mars thing. Rather than hurting my career, it actually helped it

Speaker 1 1:22:08

well, you know, like, like you're saying, it brought you to the world of space work, which brought you to the world of the Clementine Mission and things like that.

Speaker 4 1:22:19

I I, I was tapped to be part of the Clementine Mission. I, I wasn't really charged. I was, yeah, I was a, I was a deputy to the Mission Manager, like he was Marshall Dylan, and I was best and, and I bought He, gave me a very high compliment. He said, John, you were my tiger team. I knew if other people could not solve a problem, I could tell I could turn it over to you and you would solve it. So I was able to do that. And I saved the entire mission at one point, I'm proud

to say. And we made the mission into a spectacular success. And so I became, you know, a very much a space cadet. And so I was very active with the Pentagon and the intelligence agencies involving space, gathering of space information. And

1:23:27

at about that time,

S

Speaker 4 1:23:31

I also found out that there was a UFO cover up, and I was dealing with people who were, you know, respected professionals, and they basically confided in me, yes, that we faced an extraterrestrial threat. They viewed it as an extraterrestrial threat whose existence was classified. And this is the source of Reagan's, you know, statements that I've often wondered, if we were threatened from outer space, wouldn't we end the Cold War? The thing that helped end the Cold War was the fact that we were jointly threatened by people from outer space, specifically the people i The chief villains of this I heard, were the little, short, gray aliens who are doing the abductions and the animal mutilations and things like this. These people were very bad. Some of the people from out there were very nice, sure. And that was always made clear to me, the universe is a mixture of good and bad. We have some bad people we're dealing with, and they're difficult to deal with, and then we have some good people we're dealing with, and they're helping us. And so I I became quite familiar with the issues, both in the public, public one, one fellow told. Me, he says, I basically asked him if there was, you know, this extraterrestrial threat for his systems classified. But he said, Yes. He said, The rest you can figure out for yourself. He was a army colonel. Well, my deeply expected. He worked at the Pentagon, at the Joint Chief of Staff, you know, support groups. And he just said, I can't tell you anymore, but the rest, you can figure out for yourself, just from what's in the public, yeah, sphere and so, so one of the so I became very much involved in that also. One of my great ambitions had been to work on Unified Field Theory, which what Einstein tried to do to unify gravity and electromagnetism, so you could have gravity modification, that you could change gravity with electromagnetism. And so I published a theory on that called the we just, I just simply called the gem theory, gravity, electromagnetism theory. And it was well received both by the, you know, academia, who were interested in that, and also by the intelligence agencies they liked it. So I ended up publishing many, many articles on that theory, and wrote some books on it. And it's a So, and the government has this technology. The government is not just a theory, but they have technology. Oh, yeah, and so, in fact, it may have been the original effect. May have been discovered by Nikolai Tesla

S

Speaker 1 1:27:08

that I would not doubt one bit he when he was an electromagnetic wizard, is the only way. Yeah,

S

Speaker 4 1:27:17

his last articles were about controlling gravity with electromagnetism. And as it turns out, the secret is three rotating three phase power. the same thing that makes induction motors work

secret is three rotating three phase power, the same thing that makes induction motors work. Yep, did he invented? He invented that he did. And if you apply that to masses, the local gravity gets slightly weaker, and then, you know, so they don't, they don't weigh as much on a scale. And then you turn off the power, and they regain their weight. And I have discussed this frequently. You can go on the web and see my discussions of it, and so that,

1:28:03

you know, and in the meantime,

Speaker 4 1:28:06

I was married, and then I was divorced, and then I, you know, and I had, and then, and then I got married again. I had two beautiful children, and my four second wife,

1:28:20

kind of had a

Speaker 4 1:28:24

well, let's just say she left, she left us, and I had to raise the children by myself, and I did that so I was, I was not only, You know, investigator, science fiction writer, but also daddy, the two small children, and they turned out. All My Children turned out so well. I'm so proud of them. I tell people, they're my finest achievements, and God has been most gracious to me. And so now I felt then inspired to write a science fiction novel. I'd always wanted to write a science fiction novel. I had a friend of mine asked me. He said, I've always wanted to write a science fiction novel or a novel of some sort, but I can never seem to do it. And he said, why? How come? What does it take to actually sit down and write a novel? And I told him, I said, Bill, first, have something really awful happen to you? That's, you know, my case. It was, you know, my poor second wife leaving us. She had, you know, I guess, mental health issues, and she just left us. And you. Uh, and that was kind of nightmarish to just have that happen, and particularly the run up to that and then I went through 911 which was, you know, I would have nightmares out for years afterwards, yeah. And so I went through two really deep traumas, one personal and one, you know, as part of my role in the national defense. And so then, when I heard that the government had actually had secret groups that were signing secret agreements with alien groups, which was a complete breach of the Constitution. I I really felt inspired to write a novel about what would happen if that whole situation came unraveled, and so I wrote the novel, and in it these two, of course, they're very glamorous news anchors on a one's blonde and one's Asian, and they're both, you know, news anchors for A news network, and they started getting leaked documents from the US government, and
